

TPS65987 Evaluation Module

This document is the user guide for the TPS65987 Evaluation Module (TPS65987EVM). The TPS65987EVM allows for evaluation of the TPS65987 IC as part of a stand-alone testing kit for development and testing of USB Type-C and Power Delivery (PD) end products. Out of the box, the TPS65987EVM is configured to emulate a single port laptop computer. The TP65987EVM also contains a TPD6S300A device for protection.

1 Introduction

Texas Instrument's (TI's) TPS65987 evaluation module helps designers evaluate the operation and performance of the TPS65987 device.

The TPS65987 device is a USB Type-C and Power Delivery (PD) controller providing cable plug and orientation detection at the USB Type-C connector. Upon cable detection, the TPS65987 communicates on the CC wire using the USB PD protocol. When cable detection and USB PD negotiation are complete, the TPS65987 device enables the appropriate power path and configures Alternate Mode settings for external multiplexers. The TPS65987D device has two internal power paths that can be source or sink with current rating up to 5 A. The EVM is customizable through the TPS65987 Application Customization Tool. Additionally, the EVM is equipped with an FTDI chip for flashing a new project through SPI or I2C for debugging and development.

[Figure 1](#) shows the TPS65987EVM board and [Figure 2](#) shows a block level diagram.

Figure 1. TPS65987EVM Board

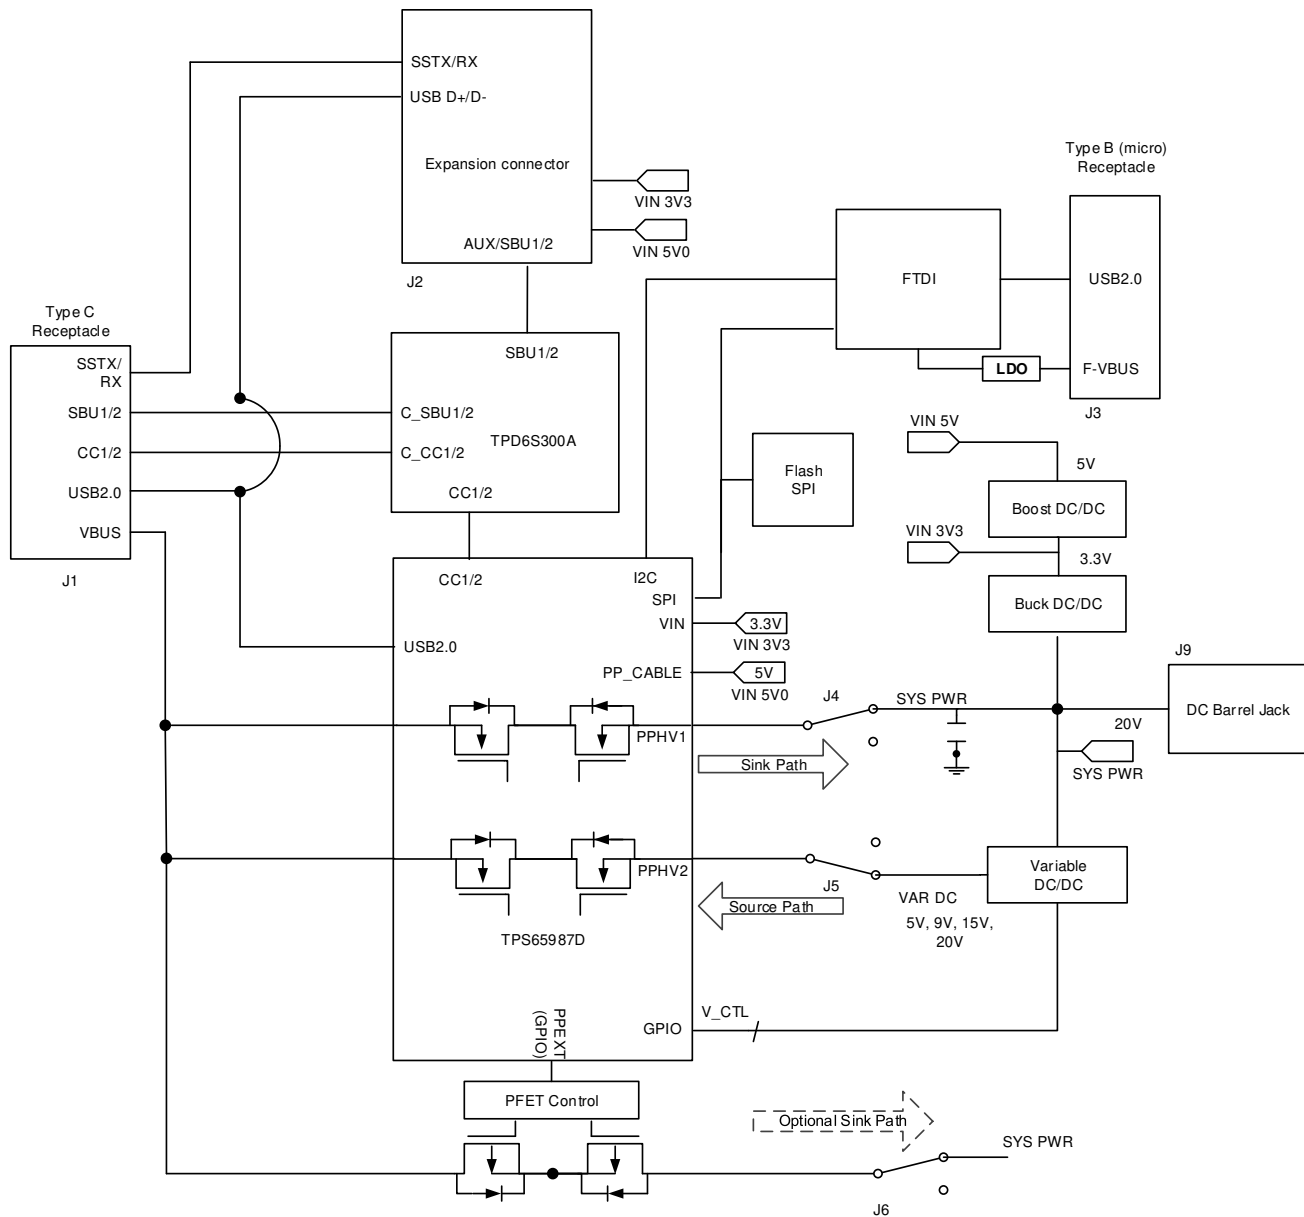

Figure 2. TPS65987EVM Block Level Diagram

1.1 Items Required for Operation

The following is required to operate the EVM:

- TPS65987EVM
- 20-V barrel jack adapter or dc power supply
- Active or e-marked USB Type-C cables
- USB Type-A to USB Micro-B cable (for configuration customization, debugging and updating FW flash)
- [TPS65987D USB Type-C and USB PD Controller with Integrated Power Switches](#) data sheet
- [TPS6598x configuration tool](#)
- [TPS6598x Application Customization Tool](#) user's guide
- [How to evaluate and configure TI's USB type-C PD Controllers](#) training videos

2 Setup

This section describes the header and jumper connections on the EVM and getting started using the TPS65987EVM.

2.1 Jumper Configuration

Out of the box, the TPS65987EVM is configured to use TPS65987's PPHV1 as sink path (J4) and PPHV2 as source path (J5), which matches the configuration of firmware already programmed in the device. Recovery FW can be programmed using the Application customization tool. In order to do that open the Application customization tool, go to File menu Device/Re Flash EVM Firmware (recovery), and select EVM Recovery File tps65987_ev_m_flash_image.bin.

Remember, the jumper configuration in the hardware must match the source and sink paths in the software, *Application Customization Tool (GUI)*. See [Figure 3](#) and [Table 1](#) for the jumper configuration.

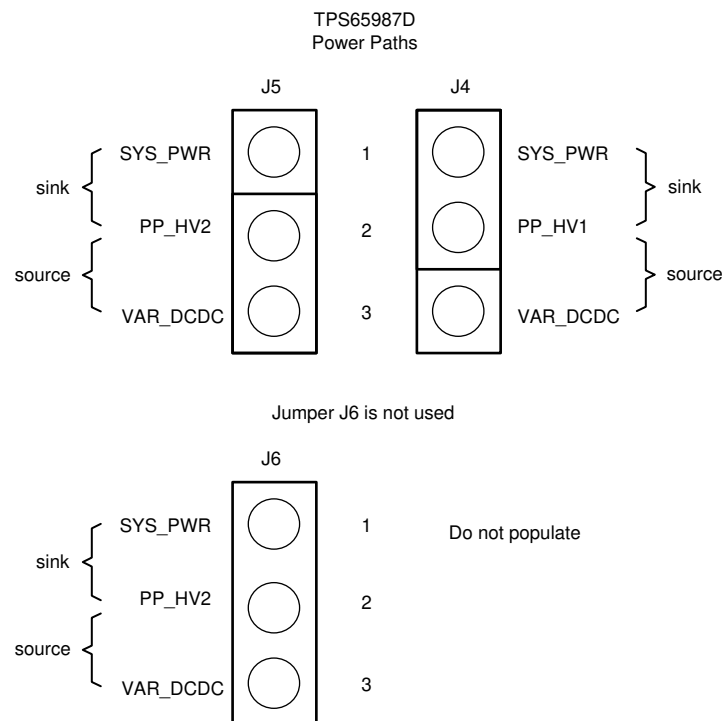

Figure 3. Power Path Jumper Configuration for Source or Sink

Table 1. Jumper Configuration

Jumper	Description
J4	TPS65987D power path: Jump pins 1-2 to sink on PP_HV1 (default)
J5	TPS65987D power path: Jump pins 2-3 to source on PP_HV2 (default)

2.2 Connector Functionality

Table 2 lists the TPS65987EVM connector and functionality.

Table 2. Connector Functionality

Designator	Description
J1	USB Type-C connector: TI recommends using an active or e-marked USB Type-c cable
J2	Expansion board connector: Option to connect to external module.
J3	Micro-B connector: Connect to a PC to flash a project on the PD controller. You must download the TPS6598x configuration tool (GUI) to flash a project properly.
J9	Barrel jack connector: Use a 19-V to 20-V DC supply. A standard Dell or HP notebook adapter (or similar) will provide the required power.

2.3 Test Points

Table 3 lists the TPS65987EVM test points.

Table 3. Test Points

Test Point	Label	Description
TP1	VBUS	V_{BUS} voltage on the USB Type-C connector. Sourcing and sinking is always in reference to V_{BUS} (Source to V_{BUS} or sink from V_{BUS}).
TP2	CC1	System side CC1. This could be VCONN or CC depending on polarity flip of the USB Type-C cable.
TP3	CC2	System side CC2. This could be VCONN or CC depending on polarity flip of the USB Type-C cable.
TP4, TP5, TP8	GND	Ground reference for entire board
TP6	P3V3	Output of 3.3-V DC/DC convertor to power up all ICs on the EVM
TP7	P5V0	Output of 5-V DC/DC convertor used for PP_CABLE (VCONN)

2.4 LEDs

Table 4 lists the TPS65987EVM LEDs.

Table 4. LEDs

Designator	Label	Description
D12	μ B VBUS	White LED that shows when the μ B port is connected (FTDI for GUI).
D13	SSMX: DP	White LED that shows when the TPS65987D device has enabled this signal for external module super-speed MUX (depending on version of EVM the silkscreen may appear to show this signal swapped with SSMX: USB3)
D14	SSMX: FLIP	White LED that shows when the TPS65987D device has enabled this signal for external module super-speed MUX
D15	SSMX: USB3	White LED that shows when the TPS65987D device has enabled this signal for external module super-speed MUX
D16	VBUS	White LED that shows when V_{BUS} has a voltage of 5 V, 9 V, 15 V, or 20 V
D19	SYS_PWR	Blue LED that shows when the barrel jack is connected
D20	VAR_DCDC	Green LED that shows when there is a voltage on the variable DC/DC controller (U9). When the EVM acts as a source, D20 lights up.
D22	PDO_0	White LED that shows when there is a 5-V PD contract (only shown when sourcing)
D22	PDO_1	White LED that shows when there is a 9-V PD contract (only shown when sourcing)
D24	PDO_2	White LED that shows when there is a 15-V PD contract (only shown when sourcing)
D25	PDO_3	White LED that shows when there is a 20-V PD contract (only shown when sourcing)
D17	/FLT	Red LED that shows when there is an fault occurred TPD6S300A device

2.5 Switches

Table 5, Table 6, and Table 7 lists the TPS65987EVM switches. For S1, make sure to leave all six switches in the ON position (to the right) for flashing a project and debugging. For S4 Switch: EVM out of the box should have S4->4 (BP_WaitFor3V3_Internal) as on(right). This ensures that PD controller enables internal paths in dead battery mode. This switch can be turned off(left) if EVM is used as source only. Note, S4[1, 2, 3] only one switch should be in "ON" position at a time, same way for S4[4, 5, 6].

Table 5. S1 Switch Bank

Switch (S1)	Description
1: SPI_CLK	Connects SPI_CLK node from FTDI to TPS65987D, EEPROM when the switch is in the ON position (to the right), and disconnects when in the OFF position (to the left)
2: SPI_MOSI	Connects SPI_MOSI node from FTDI to TPS65987D, EEPROM when the switch is in the ON position (to the right), and disconnects when in the OFF position (to the left)
3: SPI_MISO	Connects SPI_MISO node from FTDI to TPS65987D, EEPROM when the switch is in the ON position (to the right), and disconnects when in the OFF position (to the left)
4: SPI_CSZ	Connects SPI_CSZ node from FTDI to TPS65987D, EEPROM when the switch is in the ON position (to the right), and disconnects when in the OFF position (to the left)
5: I2C_SCL	Connects I2C_SCL node from FTDI to TPS65987D, EEPROM when the switch is in the ON position (to the right), and disconnects when in the OFF position (to the left)
6: I2C_SDA	Connects I2C_SDA node from FTDI to TPS65987D, EEPROM when the switch is in the ON position (to the right), and disconnects when in the OFF position (to the left)

Table 6. S4 Switch Bank

Switch (S4)	Description
1, 2, 3 OFF	I2C address selection: 000b
1 ON Only	I2C address selection: 001b
2 ON Only	I2C address selection: 010b
3 ON Only	I2C address selection: 011b
4, 5, 6 OFF	Dead battery mode: BP_NoResponse
4 ON Only	Dead battery mode: BP_WaitFor3V3_Internal
5 ON Only	Dead battery mode: BP_WaitFor3V3_External
6 ON Only	Dead battery mode: BP_NoWait

Table 7. Push Buttons

Designator	Label	Description
S2	PD Reset	This switch is a push-button that pulls the HRESET pin (44) of the TPS65987D device high when pressed. Releasing the push-button pulls HRESET low again, and the TPS65987D device goes through a soft reset, which consists of reloading firmware from RAM. If a valid configuration is present in RAM, the TPS65987D device will not reload configuration from the external flash.
S3	Disable Flash Config	This push button switch will hold the SPI Miso line to GND. Use this button when booting the device. If this button is pressed when the device is booting, the TPS65987D device does not load its configuration from the SPI Flash and instead boots into a default ROM configuration.

3 Using the TPS65987EVM

This section discusses how to power the EVM, configure the firmware, and how to debug.

3.1 Powering the TPS65987EVM

The main power supply for the EVM is the barrel jack (J9), which accepts 19 V to 20 V via a barrel jack adapter. The EVM can also be powered with an external power supply on SYS_PWR (pin 1 of J4, J5, or J6). The input voltage can range from 5 V to 20 V, but configure the appropriate power profile for PP_HV in the firmware using the configuration tool. The EVM can also be powered as a sink through a USB Type-C cable from a source adaptor, EVM, or device.

3.2 Firmware Configurations

Out of the box, the TPS65987EVM is configured to emulate a single port laptop computer. This configuration can be used to source or sink power known as (DRP), and this configuration sets DFP_D (Downward Facing Port). If different configurations are required to test your system, use the [TPS6598x configuration tool\(GUI\)](#) to create a configuration or load a different configuration template.

3.3 Debugging the EVM

The following checks can help resolve issues when connecting the EVM to another EVM or USB Type-C device and no status LEDs are on:

Make sure that a firmware image is loaded on the TPS65987EVM, using the [TPS6598x configuration tool\(GUI\)](#).

- Make sure the CC lines are toggling for dual-role port functionality.
- Make sure the following system supplies:
 - P3V3 = 3.3 V
 - P5V0 = 5 V
 - Barrel jack / SYS_PWR = 20 V (when plugged in)
 - VAR_DCDC = 5 V (when barrel jack is plugged in without a USB Type-C attached cable or device)
 - V_{BUS} = 5 V, 9 V, 15 V, or 20 V (when USB Type-C port is attached to another EVM or device)

Table 8. TPS65987EVM Bill of Materials (continued)

Designator	Quantity	Value	Description	PackageReference	PartNumber	Manufacturer	Alternate PartNumber	Alternate Manufacturer
TP1, TP2, TP3, TP4, TP5, TP6, TP7, TP8	7		Test Point, Miniature, SMT	Test Point, Miniature, SMT	5019	Keystone		
U1	1		USB Type-C and USB PD Controller with Integrated Power Switches, RSH0056E (VQFN-56)	RSH0056E	TPS65987DDHRSHR	Texas Instruments	TPS65987DDHRSHT	Texas Instruments
U2	1		USB Type-C Port Protector: Short-to-VBUS Overvoltage and IEC ESD Protection, RUK0020B (WQFN-20)	RUK0020B	TPD6S300ARUKR	Texas Instruments		Texas Instruments
U3	1		ESD Protection Array for High-Speed Data Interfaces, 2 Channels, -40 to +85 degC, 3-pin SOT (DRT), Green (RoHS & no Sb/Br)	DRT0003A	TPD2E009DRTR	Texas Instruments		
U4	1		Quad High Speed USB to Multipurpose UART/MPSSE IC	LQFP_10x10mm	FT4232HL	FTDI		
U5	1		8Mb, 86MHz, NOR Flash, SOP-8	8-SOP	MX25L8006EM11-12G	Macronix International Co., LTD		
U6	1		2.2-V to 36-V, microPower Comparator, DBV0005A (SOT-23-5)	DBV0005A	TLV1701AIDBVR	Texas Instruments	TLV1701AIDBVT	Texas Instruments
U7	1		2K Microwire Compatible Serial EEPROM, SOT-23-6	SOT-23-6	93LC56B-I/OT	Microchip	93LC56BT-I/OT	
U8	1		22-V Precision Surge Protection Clamp, DRV0006A (WSON-6)	DRV0006A	TVS2200DRVR	Texas Instruments		Texas Instruments
U9	1		Automotive Grade 4.5-35 V, Hysteretic Non-Synchronous PFET Buck Controller with Enable Pin, DGK0008A (VSSOP-8)	DGK0008A	LM3489QMM/NOPB	Texas Instruments		Texas Instruments
U10	1		4.2-V to 28-V Input voltage, 3-A Output current Synchronous buck Converter with 570kHz fixed frequency, DRC0010J (VSON-10)	DRC0010J	TPS54334DRCR	Texas Instruments	TPS54334DRCT	Texas Instruments
U11	1		Nanopower, 1.8 V, SOT23 Push-Pull Comparator with Voltage Reference, DCK0006A (SOT-SC70-6)	DCK0006A	TLV3012AIDCKR	Texas Instruments	TLV3012AIDCKT	Texas Instruments
U12	1		Integrated USB Power Switch with Boost Converter, DRC0010J (VSON-10)	DRC0010J	TPS2500DRCR	Texas Instruments		
U13	1		Single Output Fast Transient Response LDO, 1 A, Fixed 3.3 V Output, 2.7 to 10 V Input, with Low IQ, 8-pin SOIC (D), -40 to 125 degC, Green (RoHS & no Sb/Br)	D0008A	TPS76833QD	Texas Instruments		
Y1	1		CRYSTAL, 12 MHz, 20 pF, SMD	7x2.3x4.1mm	ECS-120-20-3X-TR	ECS Inc.		
C34	0	0.1 uF	CAP, CERM, 0.1 uF, 35 V, +/- 10%, X5R, 0402	0402	GMK105BJ104KV-F	Taiyo Yuden		
D21	0	24 V	Diode, TVS, Uni, 24 V, 70 Vc, SOT-23	SOT-23	PESD24VS2UT,215	Nexperia

Revision History

Changes from Original (April 2019) to A Revision	Page
• Updated Section 1.1	3
• Updated Table 1	4
• Updated Table 2	5
• Updated Table 4	5
• Updated Section 3.2	7
• Updated Figure 4 title.	8

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATA SHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#) or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
