Table 5: IPMI Commands

The following three VITA 46.11 IPMI commands are currently implemented in firmware:

- Get Device ID Command (App (06h) (01h))**
 This command will return the hardware revision, firmware/software revision, command interface revision, system serial number for the power supply.
- Get Self-Test Results Command (App (06h) (04h))**
 This command will initiate the power supply to verify all available sensor readings are within specified operating ranges. It will report successful if there are no errors, or it will report the sensor that was out of range.
- Get Sensor Reading Command (S/E (04h) (2Dh))**
 This command will return the data from one of the available sensors. The following sensors are available:

Self-test Sensor Threshold	Sensor Number	Available Data Sensors	Data Reply Format
OT = 90C	00h	BASEPLATE TEMPERATURE	2 BYTE HEX
OV/UV = +/-5%	01h	VS1 OUTPUT VOLTAGE	2 BYTE HEX
