

OV9760 960p HD product brief

960p HD Video for Front-Facing Cameras in Smartphones and Tablets

available in
a lead-free
package

The OV9760 is a high performance CameraChip™ sensor that offers 960p high definition (HD) video to secondary cameras in high-end mobile devices. The sensor leverages OmniVision's powerful 1.75-micron OmniBSI-2™ pixel architecture to deliver 960p HD video at 30 frames per second (fps) or high quality 720p HD at 30 fps with additional pixels for electronic image stabilization (EIS).

The sensor is optimized for video conferencing applications, utilizing a 2x2 binning functionality that doubles the sensitivity in VGA resolution, while scaling reduces spatial artifacts and removes image artifacts around edges to produce crisp, clean color video.

The OV9760 supports a digital video parallel port or MIPI interface, and provides full-frame, sub-sampled or windowed 10-bit images in RAW RGB format with complete user control over formatting and output data transfer.

All required image processing functions, including exposure control, white balance, and defective pixel canceling are programmable through the SCCB interface. The OV9760 fits into a compact 4.3 x 4.1 mm package.
