## 1 Product Brief

The BFP640FESD is a very low noise wideband NPN bipolar RF transistor. The device is based on Infineon's reliable high volume silicon germanium carbon (SiGe:C) heterojunction bipolar technology. The collector design supports voltages up to  $V_{CEO} = 4.1$  V and currents up to  $I_C = 50$  mA. The device is especially suited for mobile applications in which low power consumption is a key requirement. The typical transition frequency is approximately 46 GHz, hence the device offers high power gain at frequencies up to 10 GHz in amplifier applications. The transistor is fitted with internal protection circuits, which enhance the robustness against electrostatic discharge (ESD) and high levels of RF input power. The device is housed in a thin small flat plastic package with visible leads.

## 2 Features

- Robust very low noise amplifier based on Infineon's reliable, high volume SiGe:C wafer technology
- 2 kV ESD robustness (HBM) due to integrated protection circuits
- High maximum RF input power of 21 dBm
- 0.6 dB minimum noise figure typical at 1.5 GHz, 0.65 dB at 2.4 GHz, 6 mA
- 28.5 dB maximum gain  $G_{ms}$  typical at 1.5 GHz, 25 dB  $G_{ms}$  at 2.4 GHz, 30 mA
- 26 dBm  $OIP_3$  typical at 2.4 GHz, 30 mA
- Thin small flat Pb-free (RoHS compliant) and halogen-free package with visible leads
- Qualification report according to AEC-Q101 available

## Applications

As Low Noise Amplifier (LNA) in

- Mobile portable and fixed connectivity applications: WLAN 802.11a/b/g/n, WiMAX 2.5 / 3.5 / 5 GHz, UWB, Bluetooth
- Satellite communication systems: Navigation systems (GPS, Glonass), satellite radio (SDARs, DAB) and C-band LNB
- Multimedia applications such as mobile / portable TV, CATV, FM radio
- 3G/4G UMTS/LTE mobile phone applications
- ISM applications like RKE, AMR and Zigbee, as well as for emerging wireless applications

As discrete active mixer, amplifier in VCOs and buffer amplifier

***Attention: ESD (Electrostatic discharge) sensitive device, observe handling precautions***

Junction temperature	$T_J$	—	150	°C	—
Storage temperature	$T_{Stg}$	-55	150	°C	—

1) Low  $V_{CBO}$  due to integrated protection circuits.

2)  $V_{CES}$  is identical to  $V_{CEO}$  due to integrated protection circuits.

3) Sustainable reverse bias current is high due to integrated protection circuits.

4) RF input power is high due to integrated protection circuits

5) ESD robustness is high due to integrated protection circuits.

6)  $T_S$  is the soldering point temperature.  $T_S$  is measured on the emitter lead at the soldering point of the pcb.

**Attention: Stresses above the max. values listed here may cause permanent damage to the device.**

**Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Maximum ratings are absolute ratings; exceeding only one of these values may cause irreversible damage to the integrated circuit.**

3rd order intercept point	$OIP_3$	—	24.5	—		$I_C = 30\text{ mA}$

**Notes**

1.  $G_{ms} = IS_{21} / S_{12}I$  for  $k < 1$ ;  $G_{ma} = IS_{21} / S_{12}I(k - (k^2 - 1)^{1/2})$  for  $k > 1$
2. In order to get the  $NF_{min}$  values stated in this chapter the test fixture losses have been subtracted from all measured result
3.  $OIP_3$  value depends on termination of all intermodulation frequency components. Termination used for this measurement is  $50\Omega$  from  $0.2\text{ MHz}$  to  $12\text{ GHz}$ .

## 6 Simulation Data

For the SPICE Gummel Poon (GP) model as well as for the S-parameters (including noise parameters) please refer to our internet website: [www.infineon.com/rf.models](http://www.infineon.com/rf.models). Please consult our website and download the latest versions before actually starting your design.

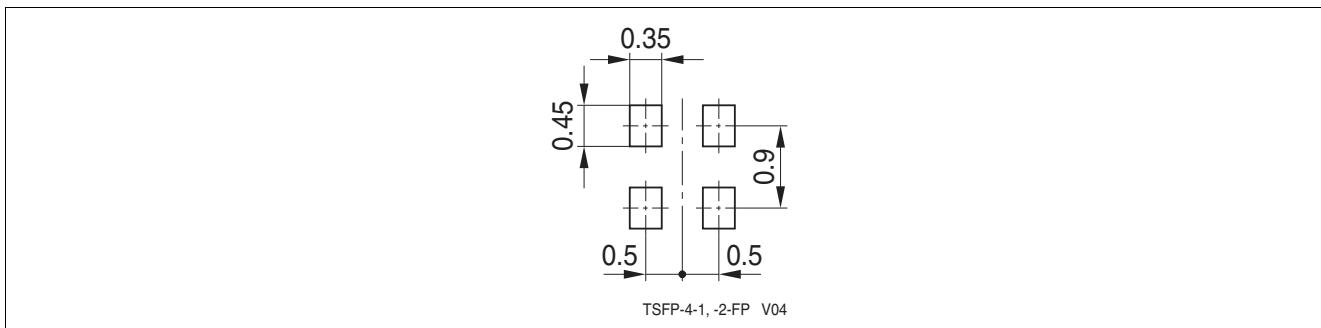

You find the BFP640FESD SPICE GP model in the internet in MWO- and ADS-format, which you can import into these circuit simulation tools very quickly and conveniently. The model already contains the package parasitics and is ready to use for DC- and high frequency simulations. The terminals of the model circuit correspond to the pin configuration of the device.

The model parameters have been extracted and verified up to 10 GHz using typical devices. The BFP640FESD SPICE GP model reflects the typical DC- and RF-performance within the limitations which are given by the SPICE GP model itself. Besides the DC characteristics all S-parameters in magnitude and phase, as well as noise figure (including optimum source impedance, equivalent noise resistance and flicker noise) and intermodulation have been extracted.
