

# R58, Class X1, THB Grade IIIB, 600 VAC, 110°C (Automotive Grade)

## Overview

The R58 is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material meeting the requirements of UL 94 V-0.

Automotive Grade devices meet the demanding Automotive Electronics Council's AEC-Q200 qualification requirements.

## Applications

For worldwide use in electromagnetic interference (EMI) suppression in across-the-line applications that require X1 safety classification. Typical applications include Industrial, Solar inverter output EMI filtering and Automotive HV DC bus filtering.

## Benefits

- Approvals: ENEC, UL, cUL (in progress)
- Class X1 (IEC 60384-14)
- THB Grade IIIB: 85°C, 85% RH, 1,000 hours at 600 VAC acc. to IEC 60384-14
- THB Grade IIIB: 85°C, 85% RH, 1,000 hours at 1,200 VDC acc. to IEC 60384-14
- Low Halogen Content according to JS709C
- Rated AC voltage: 600 VAC 50/60 Hz
- Rated DC voltage: 1,200 VDC
- Capacitance range: 0.01 – 8.2  $\mu$ F
- Lead spacing: 15.0 – 52.5 mm
- Capacitance tolerance:  $\pm$ 20%,  $\pm$ 10%
- Climatic category 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS compliant and lead-free terminations
- Operating temperature range of -40°C to +110°C
- 100% screening factory test at 3,000 VDC
- Self-healing properties
- Automotive (AEC-Q200) grade

## Customer Part Number

R58	6	I	2470	00	T0	M
Series	Rated Voltage (VAC)	Lead Spacing (mm)	Capacitance Code (pF)	Packaging	Internal Use	Capacitance Tolerance
X1, Metallized Polypropylene	6 = 600	I = 15.0 N = 22.5 R = 27.5 W = 37.5 Y = 52.5	The last three digits represent significant figures. The first digit specifies number of zeros to be added.	See Ordering Options Table	T0 T1	K = $\pm$ 10% M = $\pm$ 20%

## Ordering Options Table

Note: See the Ordering Options Table for lead length (LL) options.

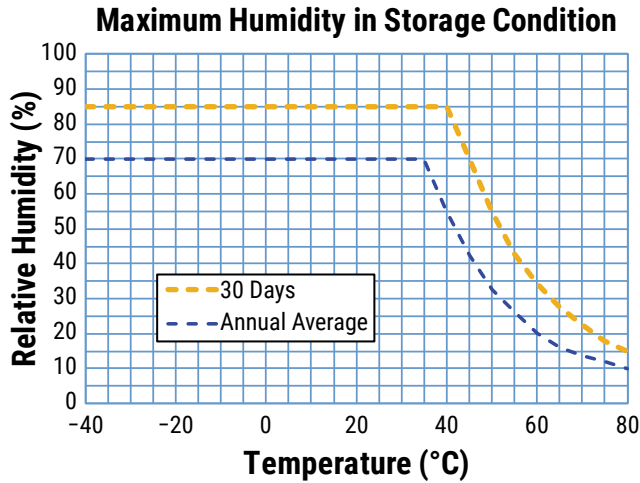

\* Box with Arc Shape Design

## Performance Characteristics

Dielectric	Polypropylene film		
Plates	Metal layer deposited by evaporation under vacuum		
Winding	Non-inductive type		
Leads	Tinned wire		
Protection	Plastic case, thermosetting resin-filled. Box material is solvent resistant and flame retardant according to UL94.		
Related Documents	IEC 60384-14, EN 60384-14		
Rated Voltage $V_R$	600 VAC (50/60 Hz) / 1,200 VDC		
Capacitance Range	0.01 – 8.2 $\mu$ F		
Capacitance Values	E6 series (IEC 60063) measured at 1 kHz and +20 $\pm$ 1°C		
Capacitance Tolerance	$\pm$ 10%, $\pm$ 20%		
Temperature Range	-40°C to 110°C		
Climatic Category	40/110/56 IEC 60068-1		
Storage Conditions	Storage time: $\leq$ 24 months from the date marked on the label package		
	Average relative humidity per year $\leq$ 70%		
	RH $\leq$ 85% for 30 days randomly distributed throughout the year		
	Dew is absent		
Approvals	Temperature: -40 to 80°C (see "Maximum Humidity in Storage Conditions" graph below) ENEC, UL, cUL (in progress)		
Dissipation Factor ( $\tan\delta$ ) at 1 kHz	Maximum Values at +25°C $\pm$ 5°C		
	Pitch = 15 mm	Pitch = 22.5 or 27.5 mm	Pitch = 37.5 or 52.5 mm
	0.4%	0.3%	0.2%
Test Voltage Between Terminations	The 100% screening factory test is carried out at 3,000 VDC. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. It is not permitted to repeat this test as there is a risk to damage the capacitor. KEMET is not liable in such case for any failures.		
Insulation Resistance	Measured at +25°C $\pm$ 5°C, according to IEC 60384-2		
	Minimum Values Between Terminals		
	Voltage Charge	Voltage Charge Time	C $\leq$ 0.33 $\mu$ F
100 VDC	1 minute	$\geq 1 \cdot 10^5$ M $\Omega$ ( $\geq 5 \cdot 10^5$ M $\Omega$ )*	$\geq 30,000$ M $\Omega \cdot \mu$ F ( $\geq 150,000$ M $\Omega \cdot \mu$ F)*

\*Typical Value

## Performance Characteristics cont.

$T_{AMB}$  is the maximum ambient temperature surrounding the capacitor or hottest contact point (e.g. tracks), whichever is higher, in the worst operation conditions in °C.

## Qualification

Automotive grade products meet or exceed the requirements outlined by the Automotive Electronics Council. Details regarding test methods and conditions are referenced in document AEC-Q200, Stress Test Qualification for Passive Components. For additional information regarding the Automotive Electronics Council and AEC-Q200, please visit their website at [www.aecouncil.com](http://www.aecouncil.com).

## Impedance Graph

## Environmental Test Data

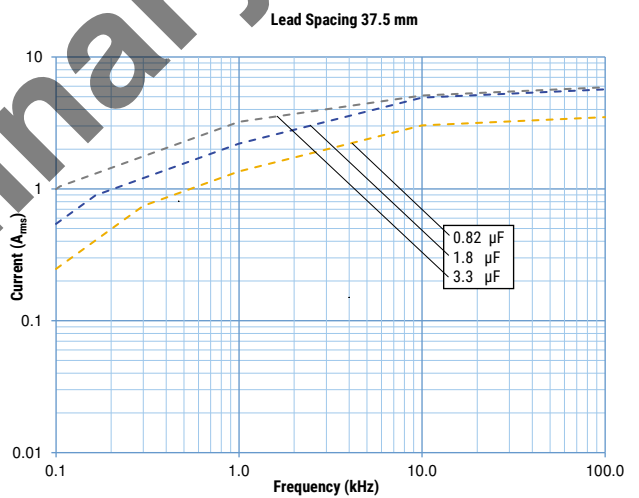

Test	IEC Publication	Procedure
Endurance	IEC 60384-14	1.25 x V <sub>R</sub> VAC 50 Hz, once every hour increase to 1,000 VAC for 0.1 second, 1,000 hours at upper rated temperature
Endurance	IEC 60384-14	1.25 x 1200 VDC, 1,000 hours at upper rated temperature
Vibration	MIL-STD-202 Method 204	5 G for 20 minutes, 12 cycles each of 3 orientations. Use 8" X 5" PCB, 0.031" thick. 7 secure points on one 8" side and 2 secure points at corners of opposite sides. Parts mounted within 2" from any secure point. Test from 10 – 2,000 Hz.
Mechanical Shock	MIL-STD-202 Method 213	Figure 1 of Method 213. Condition C
Temperature Cycling	JESD22-Method JA-104	1,000 cycles (-40°C to 110°C) Note: Measurement at 24 ±4 hours after test conclusion. 30 minute maximum dwell time at each temperature extreme. 1 minute maximum transition time.
Active Flammability	IEC 60384-14	V <sub>R</sub> + 20 surge pulses at 4 kV (pulse every 5 seconds)
Passive Flammability	IEC 60384-14	IEC 60384-1, IEC 60695-11-5 Needle Flame Test
Biased Humidity	According to Grade IIIB	85°C/85% RH and 600 VAC, 1,000 hours Capacitance change ( $\Delta C/C$ ): $\leq 10\%$ Dissipation factor change ( $\Delta \tan \delta$ ): $\leq 24 * 10^{-3}$ (at 10 kHz) for C $\leq 1 \mu F$ Dissipation factor change ( $\Delta \tan \delta$ ): $\leq 15 * 10^{-3}$ (at 1 kHz) for C $> 1 \mu F$ Insulation resistance Rins or time constant $\tau = CR$ Rins: $\geq 50\%$ of initial limit
Biased Humidity	According to Grade IIIB	85°C/85% RH and 1200 VDC, 1,000 hours Capacitance change ( $\Delta C/C$ ): $\leq 10\%$ Dissipation factor change ( $\Delta \tan \delta$ ): $\leq 24 * 10^{-3}$ (at 10 kHz) for C $\leq 1 \mu F$ Dissipation factor change ( $\Delta \tan \delta$ ): $\leq 15 * 10^{-3}$ (at 1 kHz) for C $> 1 \mu F$ Insulation resistance Rins or time constant $\tau = CR$ Rins: $\geq 50\%$ of initial limit

## Maximum Voltage ( $V_{RMS}$ ) Versus Frequency (Sinusoidal Waveform/ $Th \leq 85^\circ C$ )

## Maximum Current ( $I_{RMS}$ ) Versus Frequency (Sinusoidal Waveform/ $T_h \leq 85^\circ\text{C}$ )

## Environmental Compliance

All KEMET EMI capacitors are RoHS compliant.

## Approvals

(1) Insert lead and packaging code. See table for available options.

(2) M = ±20%, K = ±10%

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of SnAuCu (SAC) alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from 183°C for SnPb eutectic alloys to 217 – 221°C for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is 160 – 170°C). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 – 15 mm), and great care must be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. See Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the recommended limits may result in degradation of or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface-mount components. Insert through-hole parts after curing the surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum of two soldering cycles is recommended. Allow time for the capacitor surface temperature to return to normal before the second soldering cycle.

### Manual Soldering Recommendations

The following is the recommendation for manual soldering with a soldering iron.

### Wave Soldering Recommendations

Figure 1

Soldering iron tip temperature should be set at 350°C (+10°C maximum), with the soldering duration not to exceed 3 seconds.

## Soldering Process cont.

### Wave Soldering Recommendations cont.

1. The table indicates the maximum set-up temperature of the soldering process.  
Figure 1

Dielectric Film Material	Maximum Preheat Temperature		Maximum Peak Soldering Temperature	
	Capacitor Pitch ≤ 15 mm	Capacitor Pitch > 15 mm	Capacitor Pitch ≤ 15 mm	Capacitor Pitch > 15 mm
Polyester	130°C	130°C	270°C	270°C
Polypropylene	110°C	130°C	260°C	270°C
Paper	130°C	140°C	270°C	270°C
Polyphenylene Sulphide	150°C	160°C	270°C	270°C

2. The maximum temperature measured inside the capacitor: set the temperature so that the maximum temperature is below the.

Dielectric Film Material	Maximum Temperature Measured Inside the Element
Polyester	160°C
Polypropylene	110°C
Paper	160°C
Polyphenylene Sulphide	160°C

Temperature monitored inside the capacitor.

### Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath, as in normal flow soldering, without touching the solder. When the board is over the bath, it is stopped. Pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and then pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double-wave flow soldering outlined in this document. **However, instead of two baths, there is only one with a time from 3 to 10 seconds.** In selective soldering, the risk of overheating is greater than in double-wave flow soldering. Great care must be taken so that the parts do not overheat.

## Mounting

### Resistance to Vibration and Mechanical Shock

AEC-Q200 Mechanical Stress Tests:

<b>Mechanical Shock</b>	<b>MIL-STD-202 Method 213</b>	Test condition C Peak value 100 g, duration 6 ms, half-sine-wave (see MIL-HDBK for details)
<b>Vibration</b>	<b>MIL-STD-202 Method 204</b>	5 g for 20 minutes, 12 cycles each of 3 orientations Use 8"X5" PCB, 0.031" thick. 7 secure points on one 8" side and 2 secure points at corners of opposite sides. Parts mounted within 2" from any secure point. Test from 10 – 2,000 Hz.

The capacitors are designed for PCB mounting. The stand-off pipes must be in good contact with the printed circuit board. The capacitors with pitch  $\leq 22.5$  mm can be mechanically fixed by the leads, for pitch  $> 22.5$  mm, the capacitor body has to be properly fixed (e.g. clamped or glued).

### Disclaimer

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.
