

# IPS5451/IPS5451S

## FULLY PROTECTED HIGH SIDE POWER MOSFET SWITCH

### Features

- Over temperature protection (with auto-restart)
- Over current shutdown
- Active clamp
- E.S.D protection
- Status feedback
- Open load detection
- Logic ground isolated from power ground

### Product Summary

$R_{ds(on)}$	25mΩ (max)
$V_{\text{clamp}}$	50V
$I_{\text{shutdown}}$	35A
$I_{\text{open load}}$	1A

### Description

The IPS5451/IPS5451S are fully protected five terminal high side switch with built in short circuit, over-temperature, ESD protection, inductive load capability and diagnostic feedback. The over-current protection latches off the device if the output current exceeds  $I_{\text{shutdown}}$ . It can be reset by turning the input pin low. The over-temperature protection turns off the high side switches if the junction temperature exceeds  $T_{\text{shutdown}}$ . It will automatically restart after the junction has cooled 7°C below  $T_{\text{shutdown}}$ . A diagnostic pin is provided for status feedback of over-current, over-temperature and open load detection. The double level shifter circuitry allows large offsets between the logic ground and the load ground.
