

SCAN90CP02 1.5 Gbps 2x2 LVDS Crosspoint Switch with Pre-Emphasis and IEEE 1149.6

Check for Samples: [SCAN90CP02](#)

FEATURES

- 1.5 Gbps per Channel
- Low Power: 70 mA in Dual Repeater Mode @ 1.5 Gbps
- Low Output Jitter
- Configurable 0/25/50/100% Pre-Emphasis Drives Lossy Backplanes and Cables
- Non-Blocking Architecture Allows 1:2 Splitter, 2:1 Mux, Crossover, and Dual Buffer Configurations
- Flow-Through Pinout
- LVDS/BLVDS/CML/LVPECL Inputs, LVDS Outputs
- IEEE 1149.1 and 1149.6 Compliant
- Single 3.3V Supply
- Separate Control of Inputs and Outputs Allows for Power Savings
- Industrial -40 to +85°C Temperature Range
- 28-Lead UQFN Package, or 32-Lead LQFP Package

DESCRIPTION

The SCAN90CP02 is a 1.5 Gbps 2 x 2 LVDS crosspoint switch. High speed data paths and flow-through pinout minimize internal device jitter, while configurable 0/25/50/100% pre-emphasis overcomes external ISI jitter effects of lossy backplanes and cables. The differential inputs interface to LVDS and Bus LVDS signals such as those on TI's 10-, 16-, and 18-bit Bus LVDS SerDes, as well as CML and LVPECL. The SCAN90CP02 can also be used with ASICs and FPGAs. The non-blocking crosspoint architecture is pin-configurable as a 1:2 clock or data splitter, 2:1 redundancy mux, crossover function, or dual buffer for signal booster and stub hider applications.

Integrated IEEE 1149.1 (JTAG) and 1149.6 circuitry supports testability of both single-ended LVTTTL/CMOS and differential LVDS PCB interconnect. The 3.3V supply, CMOS process, and LVDS I/O ensure high performance at low power over the entire industrial -40 to +85°C temperature range.

GND	See ⁽²⁾	5, 11, 15, 20, 26, 30		Ground reference to LVDS and CMOS circuitry. For the UQFN package, the DAP is used as the primary GND connection to the device. The DAP is the exposed metal contact at the bottom of the UQFN-28 package. It should be connected to the ground plane with at least 4 vias for optimal AC and thermal performance.

- (1) The LVDS outputs do not support a multidrop (BLVDS) environment. The LVDS output characteristics of the SCAN90CP02 device have been optimized for point-to-point backplane and cable applications.
- (2) Note that for the UQFN package GND is not an actual pin on the package, the GND is connected thru the DAP on the back side of the UQFN package.

PRE-EMPHASIS

The pre-emphasis is used to compensate for long or lossy transmission media. Separate pins are provided for each output to minimize power consumption. Pre-emphasis is programmable to be off or to preset values per Table 1.

Output Characteristics

The output characteristics of the SCAN90CP02 device have been optimized for point-to-point backplane and cable applications.

Input Interfacing

The SCAN90CP02 accepts differential signals and allow simple AC or DC coupling. With a wide common mode range, the SCAN90CP02 can be DC-coupled with all common differential drivers (i.e. LVPECL, LVDS, CML). The following three figures illustrate typical DC-coupled interface to common differential drivers.

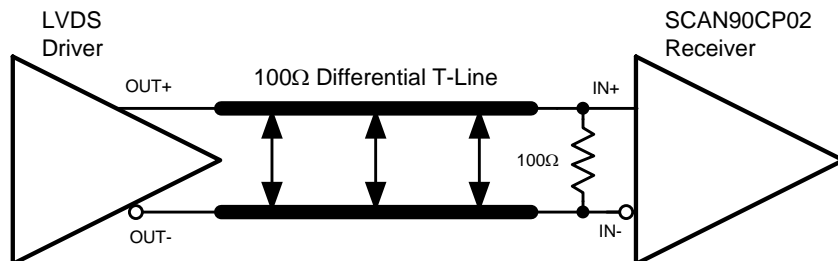

Figure 9. Typical LVDS Driver DC-Coupled Interface to SCAN90CP02 Input

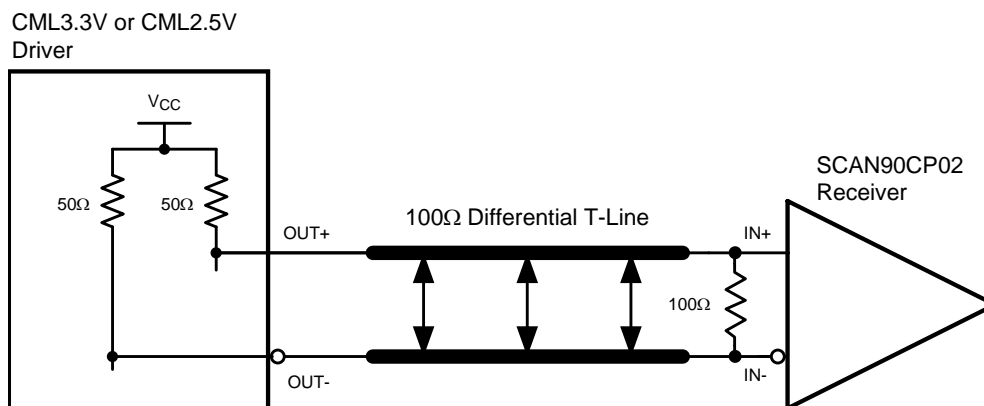

Figure 10. Typical CML Driver DC-Coupled Interface to SCAN90CP02 Input

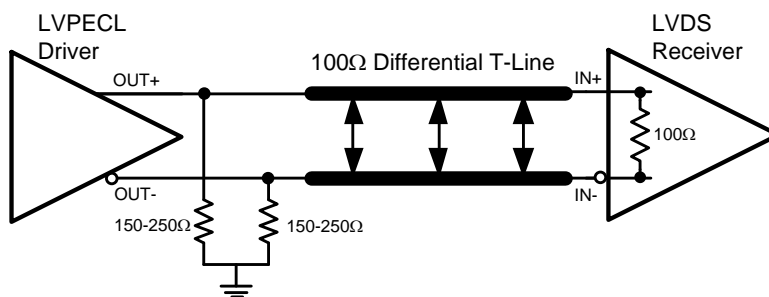

Figure 11. Typical LVPECL Driver DC-Coupled Interface to SCAN90CP02 Input

Output Interfacing

The SCAN90CP02 outputs signals that are compliant to the LVDS standard. Their outputs can be DC-coupled to most common differential receivers. Figure 12 illustrates typical DC-coupled interface to common differential receivers and assumes that the receivers have high impedance inputs. While most differential receivers have a common mode input range that can accommodate LVDS compliant signals, it is recommended to check respective receiver's data sheet prior to implementing the suggested interface implementation.

DESIGN-FOR-TEST (DFT) FEATURES

IEEE 1149.1 SUPPORT

The SCAN90CP02 supports a fully compliant IEEE 1149.1 interface. The Test Access Port (TAP) provides access to boundary scan cells at each LVTTTL I/O on the device for interconnect testing. Differential pins are included in the same boundary scan chain but instead contain IEEE1149.6 cells. IEEE1149.6 is the improved IEEE standard for testing high-speed differential signals.

Refer to the BSDL file located on TI's website for the details of the SCAN90CP02 IEEE 1149.1 implementation.

IEEE 1149.6 SUPPORT

AC-coupled differential interconnections on very high speed (1+ Gbps) data paths are not testable using traditional IEEE 1149.1 techniques. The IEEE 1149.1 structures and methods are intended to test static (DC-coupled), single ended networks. IEEE1149.6 is specifically designed for testing high-speed differential, including AC coupled networks.

The SCAN90CP02 is intended for high-speed signaling up to 1.5 Gbps and includes IEEE1149.6 on all differential inputs and outputs.

FAULT INSERTION

Fault Insertion is a technique used to assist in the verification and debug of diagnostic software. During system testing faults are "injected" to simulate hardware failure and thus help verify the monitoring software can detect and diagnose these faults. In the SCAN90004 an IEEE1149.1 "stuck-at" instruction can create a stuck-at condition, either high or low, on any pin or combination of pins.

A more detailed description of the stuck-at feature can be found in Texas Instruments Applications note AN-1313([SNLA060](#)).

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
