

Features

- Advanced Planar Technology
- Low On-Resistance
- Logic Level Gate Drive
- Dual N and P Channel MOSFET
- Dynamic dv/dt Rating
- 150°C Operating Temperature

Specifically designed for Automotive applications, this cellular design of HEXFET® Power MOSFETs utilizes the latest

processing techniques to achieve low on-resistance per silicon

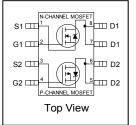

area. This benefit combined with the fast switching speed and ruggedized device design that HEXFET power MOSFETs are well known for, provides the designer with an extremely efficient and reliable device for use in Automotive and a wide variety of

Fast Switching

Absolute Maximum Ratings

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only; and functional operation of the device at these or any other condition beyond those indicated in the specifications is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions. Ambient temperature (TA) is 25°C, unless otherwise specified.

Notes:

- ① Repetitive rating; pulse width limited by max. junction temperature. (See Fig. 23)
- N-Channel $I_{SD} \le 2.4 A$, $di/dt \le 73 A/\mu s$, $V_{DD} \le V_{(BR)DSS}$, $T_J \le 150 ^{\circ} C$. P-Channel $I_{SD} \le$ -1.8A, di/dt \le 90A/ μ s, $V_{DD} \le V_{(BR)DSS}$, $T_J \le$ 150°C
- Pulse width ≤ 300µs; duty cycle ≤ 2%.

 When mounted on 1" square PCB (FR-4 or G-10 Material). For recommended footprint and soldering techniques refer to application note #AN-994
