0RQB-D0W12L

Isolated DC-DC Converter

The 0RQB-D0W12L is an isolated DC/DC converter that provide up to 200 W of output power from a wide input range (72 V, 96 V and 110 V typical).

The unit is designed to be highly efficient. Standard feature include remote on/off, input under-voltage lockout, over current and short circuit protection and overvoltage protection. Conformal coated PCB is used for environmental ruggedness.

RoHS Compliant

Key Features & Benefits

- 72/96/110 VDC Input / 12 VDC @ 16.7 A Output/1/4th Brick Converter
- Isolated
- Fixed Frequency
- High Efficiency
- Input Under Voltage Lockout
- Input Over Voltage Lockout
- OCP/SCP
- Output Over-voltage Protection
- Over Temperature Protection
- Approved to UL/CSA60950-1, 2nd +A2 version(TBD)
- Class II, Category 2, Isolated DC/DC Converter (refer to IPC-9592B)

Applications

- Industrial
- Railways
- Telecommunications

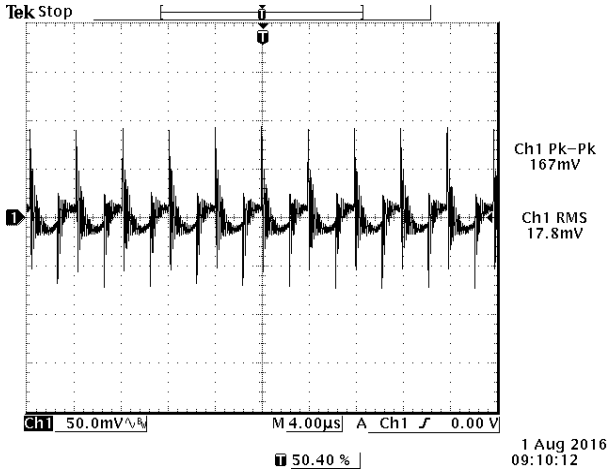
8. RIPPLE AND NOISE WAVEFORM



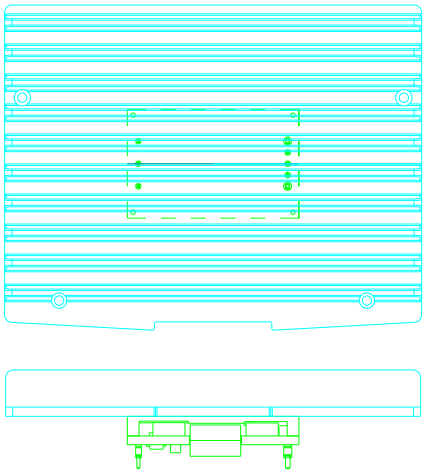
Note: Ripple and noise 110Vdc input, 12Vdc/16.7A output and Ta=25 deg C, and with a 1uF ceramic cap and 220uF electrolytic cap at output.

9. THERMAL DERATING CURVES

1. In order to make it convenient for safety and test engineer, each curve has 3 air velocity at most. It is better that the middle one is at the center of minimum and maximum. For example, 0-200-400, 0-100-200, 100-200-300

2. If the minimum air velocity is 0LFM or 50LFM, do not mark on the curve, just record as "Natural Convection"

Maximum junction temperature of semiconductors derated to 115 degree C.



HSK Dimension:142x110x16mm (16 includes baseplate and ribs)

TA is the temperature on the large heatsink rib

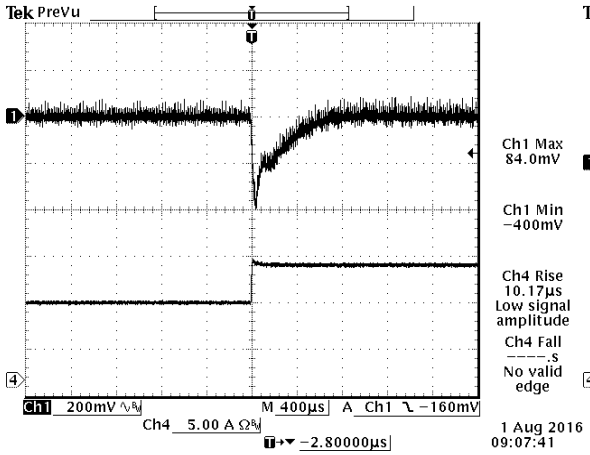
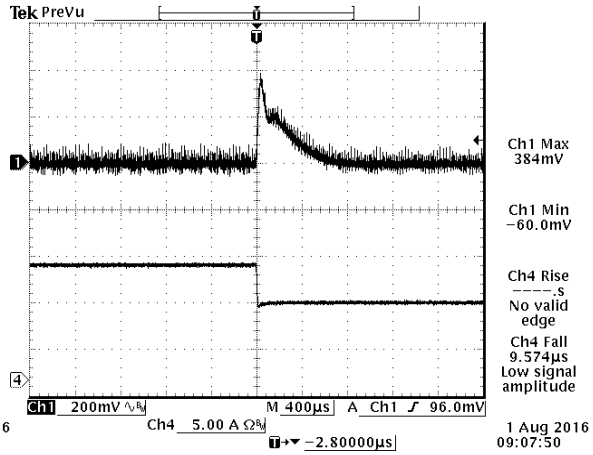
10. TRANSIENT RESPONSE WAVEFORMS

Transient Response: di/dt=0.1A/us, 1uF ceramic cap and 220uF electrolytic cap at output.



Vout= 12V 50%-75% Load Transients at Vin=110V, Ta=25 deg C



Vout= 12V 75%-50% Load Transients at Vin=110V, Ta=25 deg C

11. REMOTE SENSE

This module has remote sense compensation feature. It can minimizes the effects of resistance between moudle's output and load in system layout and facilitates accurate voltage regulation at load terminals or other selected point.

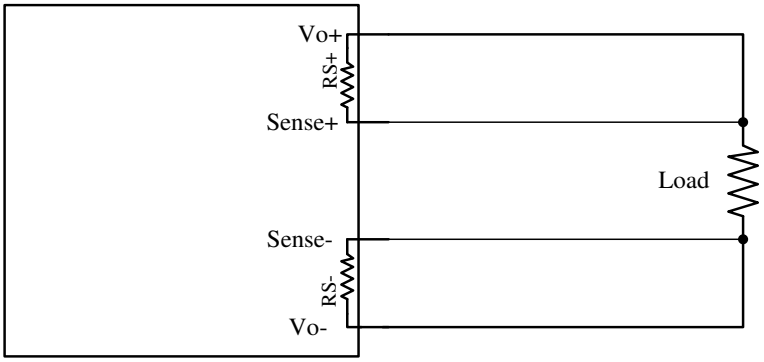
1. The remote sense lines carry very little current and hence do not require a large cross-sectional area.

2. This module compensates for a maximum drop of 4% of the nominal output voltage.

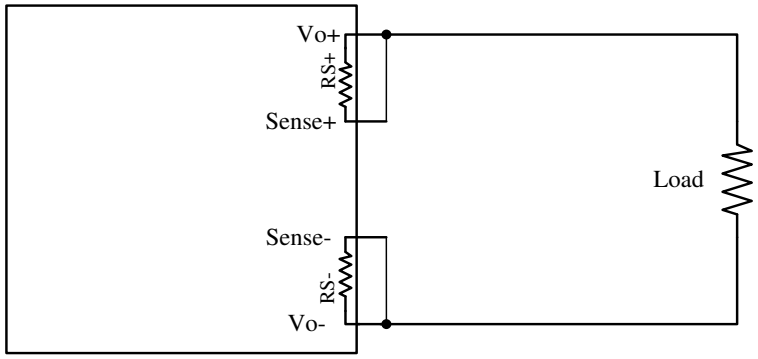
3. If the unit is already trimmed up, the available remote sense compensation range should be correspondingly reduced. The total voltage increased by trim and remote sense should not exceed 4% of the nominal output voltage.

4. When using remote sense compensation, all the resistance, parasitic inductance and capacitance of the system are incorpotated within the feedback loop of this module. The can make an effect on the module's compensation, affecting the stability and dyn

5. Recommend the connection of remote sense compensation as below figure. There are a resistor RS+ (100 ohm) from Vo+ to Sense+ and a resistor RS- (100 ohm)) from Vo- to Sense- inside of this module.

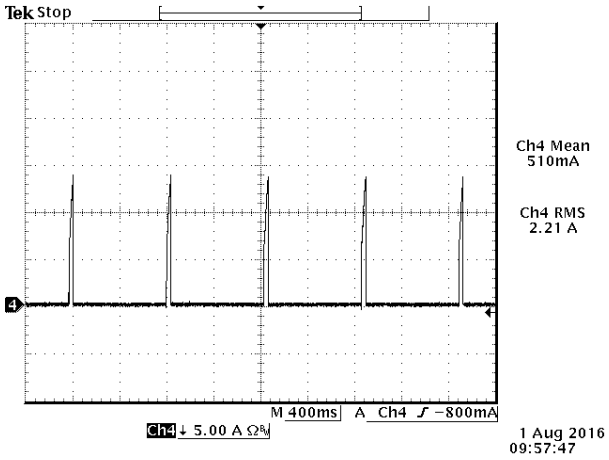


6. If not using remote sense compensation, please connect sense directly to output at module's pin, that is, connect sense+ to Vo+ and sense- to Vo- at module's pin, the shorter the better. see below figure.

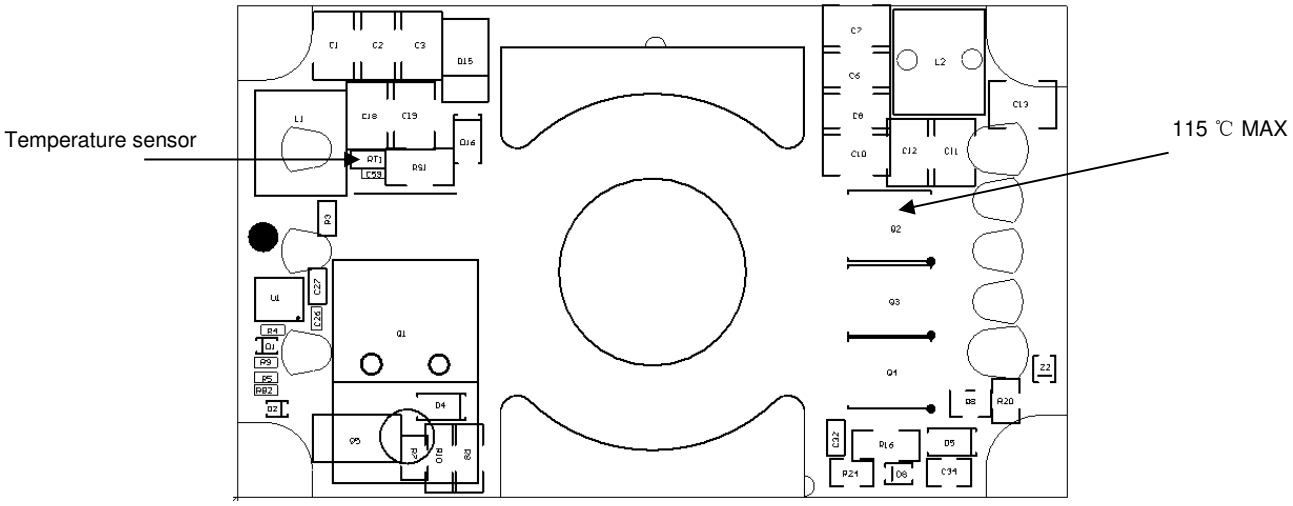


12. OVER CURRENT PROTECTION

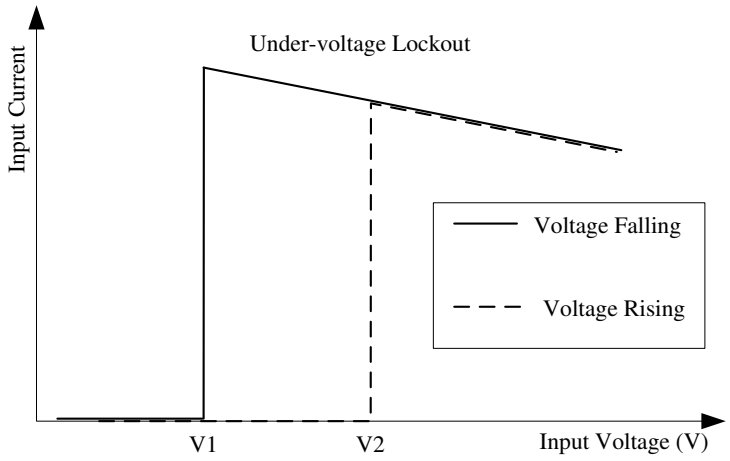
To provide protection in a fault output overload condition, the module is equipped with internal current-limiting circuitry and can endure current limiting for a few mili-seconds. If the overcurrent condition persists beyond a few milliseconds, the module will shut down into hiccup mode and restart once every 800mS. The module operates normally when the output current goes into specified range. The typical average output current is 0.51A during hiccup.



13. OVER TEMPERATURE PROTECTION



14. INPUT UNDER-VOLTAGE LOCKOUT



V1=38V

V2=40V
