

August 1991

Features

- 10A and 8.3A, 400V - 350V
- $r_{DS(on)} = 0.55\Omega$ and 0.80Ω
- Single Pulse Avalanche Energy Rated*
- SOA is Power-Dissipation Limited
- Nanosecond Switching Speeds
- Linear Transfer Characteristics
- High Input Impedance

Description

The IRF340, IRF341, IRF342, and IRF343 are n-channel enhancement-mode silicon-gate power field-effect transistors. IRF340R, IRF341R, IRF342R, and IRF343R types are advanced power MOSFETs designed, tested, and guaranteed to withstand a specified level of energy in the breakdown avalanche mode of operation. All of these power MOSFETs are designed for applications such as switching regulators, switching converters, motor drivers, relay drivers, and drivers for high-power bipolar switching transistors requiring high speed and low gate-drive power. These types can be operated directly from integrated circuits.

The IRF types are supplied in the JEDEC TO-204AA steel package.
