

Evaluating the AD7176-2 24-Bit, 250 kSPS Sigma-Delta ADC with 20 μ s Settling

FEATURES

- Full featured evaluation board for the [AD7176-2](#)
- PC control in conjunction with the system demonstration platform ([EVAL-SDP-CB1Z](#))
- PC software for control and data analysis (time domain)
- Standalone capability

EVALUATION KIT CONTENTS

- [EVAL-AD7176-2SDZ](#) evaluation board
- AD717x Eval+ software CD
- 7 V to 9 V ac to dc adapter
- Plastic screw washer set

EQUIPMENT NEEDED

- DC signal source
- PC running Windows® XP to Windows 10
- USB cable

DOCUMENTS NEEDED

- [AD7176-2](#) data sheet
- [EVAL-AD7176-2SDZ](#) user guide

GENERAL DESCRIPTION

The [EVAL-AD7176-2SDZ](#) evaluation kit features the [AD7176-2](#) 24-bit, 250 kSPS analog-to-digital converter (ADC). A 7 V to 9 V external bench top supply is regulated to 5 V and 3.3 V to supply the [AD7176-2](#) and support all necessary components. The [EVAL-AD7176-2SDZ](#) evaluation board connects to the USB port of the PC by connection to the [EVAL-SDP-CB1Z](#) controller board.

The AD717x Eval+ software fully configures the [AD7176-2](#) device functionality via an interactive block diagram and a user accessible register interface and provides dc time domain analysis in the form of waveform graphs, histograms, and associated noise analysis for ADC performance evaluation.

Full specifications for the [AD7176-2](#) are available in the product data sheet, which must be consulted in conjunction with this user guide when using the [EVAL-AD7176-2SDZ](#) evaluation board.

EVAL-AD7176-2SDZ QUICKSTART GUIDE

To begin using the [EVAL-AD7176-2SDZ](#) evaluation board, do the following:

1. Disconnect the [EVAL-SDP-CB1ZSDP-B](#) evaluation board from the USB port of the PC. Install the **AD717x Eval+** software from the enclosed CD. Restart the PC after installation.
2. Connect the [EVAL-SDP-CB1Z](#) evaluation board to the [EVAL-AD7176-2SDZ](#) evaluation board as shown in Figure 2.
3. Screw the two evaluation boards together using the plastic screw washer set included in the evaluation board kit to ensure that the evaluation boards are connected firmly together.
4. Connect the external 9 V power supply to the J5 connector of the [EVAL-AD7176-2SDZ](#) evaluation board, as shown in Figure 2. Set LK2 to Position B.
5. Connect the [EVAL-SDP-CB1Z](#) evaluation board to the PC using a USB cable. If you are using Windows XP, you may need to search for the [EVAL-SDP-CB1Z](#) drivers. Choose to automatically search for the drivers for the [EVAL-SDP-CB1Z](#) evaluation board if prompted by the operating system.
6. Launch the **AD717x Eval+** software from the **Analog Devices** subfolder in the **Programs** menu.

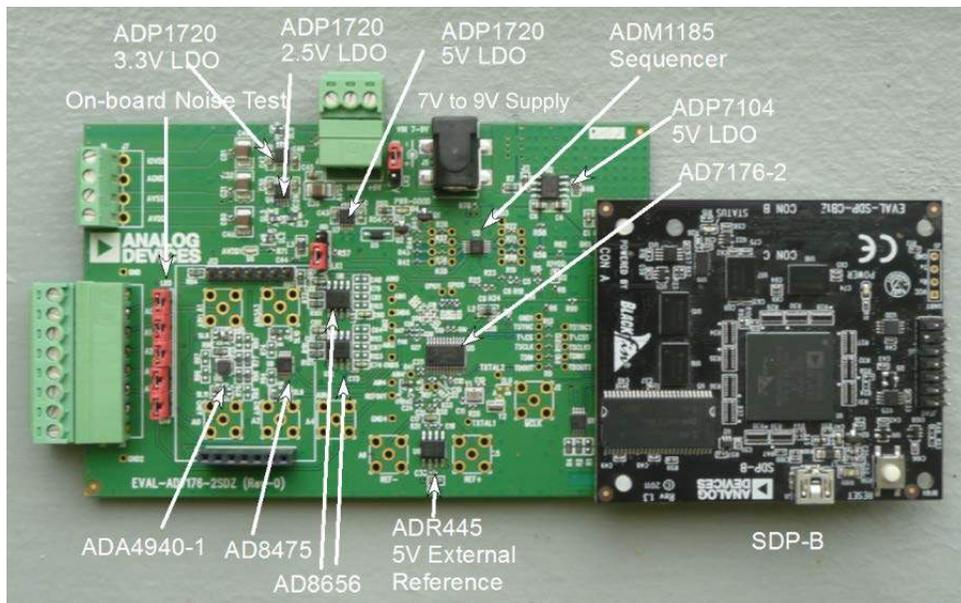

Figure 2. Setting Up the [EVAL-AD7176-2SDZ](#) Hardware Configuration

EVALUATION BOARD HARDWARE

DEVICE DESCRIPTION

The [AD7176-2](#) is a low noise, fast settling, multiplexed, 2-/4-channel (fully differential/pseudo differential) Σ - Δ ADC. The [AD7176-2](#) has a maximum channel to channel scan rate of 50 kSPS (20 μ s) for fully settled data. The output data rates range from 5 Hz to 250 kHz.

Complete specifications for the [AD7176-2](#) are provided in the product data sheet and must be consulted in conjunction with this user guide when using the [EVAL-AD7176-2SDZ](#) evaluation

board. Full details about the [EVAL-SDP-CB1Z](#) evaluation board are available on the Analog Devices, Inc., website.

HARDWARE LINK OPTIONS

The default link and solder link options are listed in Table 1. By default, the [EVAL-AD7176-2SDZ](#) evaluation board is configured to operate from the external bench top power supply via Connector J4. The supply required for the [AD7176-2](#) comes from the on-board [ADP1720](#) low dropout (LDO) generators, which generate input voltages from J4.

Table 1. Default Link and Solder Link Options

Link No.	Default Option	Description
LK1	A	Connects the AVDD1 voltage to the power supply sequencer, ADM1185 . When AVDD1 equals 5 V, LK1 must be in Position A. When AVDD1 equals 2.5 V, LK1 must be in Position B.
LK2	A	Selects the connector for the external 7 V to 9 V power supply. In Position A, LK2 selects the external 7 V to 9 V power supply to come from Connector J4. In Position B, LK2 selects the external 7 V to 9 V power supply to come from Connector J5.
LK5 to LK9	Inserted	Inserting LK5 to LK9 sets up the on-board noise test. In this mode, all inputs are shorted to the REFOUT pin.
SL1	A	Sets the voltage applied to the AVDD2 pin. In Position A, SL1 sets the voltage applied to the AVDD2 pin to be the same voltage applied to the AVDD1 pin. In Position B, SL1 sets the voltage applied to the AVDD2 pin to be a 3.3 V supply from the ADP1720ARMZ-3.3-R7 (U10) regulator or from an external voltage. AVDD2 cannot be set to 3.3 V when AVDD1 equals 2.5 V and AVSS equals -2.5 V.
SL2	A	Sets the voltage applied to the AVDD1 pin. In Position A, SL2 sets the voltage applied to the AVDD1 pin to be a 5 V supply from the ADP1720ARMZ-5-R7 (U7) regulator or a 2.5 V supply from the ADP1720ARMZ-R7 (U4) regulator. In Position B, SL2 sets the voltage applied to the AVDD1 pin to be supplied from an external voltage source via Connector J9. When AVDD1 equals 2.5 V, AVSS can be set to -2.5 V using an external supply connected to Connector J9. The AVSS to AGND solder links must be removed when a split power supply is used.
SL3, SL7	A, A	With SL3 and SL7 in Position A, AVDD1 is supplied with 5 V from ADP1720ARMZ-5-R7 (U7) regulator. With SL3 and SL7 in Position B, AVDD1 is supplied with 2.5 V from the ADP1720ARMZ-R7 (U4) regulator.
SL4	A	With SL4 in Position A, the AIN4 analog input on the AD7176-2 device is connected to Connector J8. With SL4 in Position B, the AIN4 analog input is connected to the REFOUT pin of the AD7176-2 . With SL4 in Position C, the AIN4 analog input is connected to ground for use with four pseudo differential inputs, if required.
SL5	B	With SL5 in Position A, the IOVDD supply is provided from an external source via Connector J9. With SL5 in Position B, the 3.3 V supply is generated by the ADP1720ARMZ-3.3-R7 (U10) regulator. The evaluation system operates with 3.3 V logic.
SL6	Not Inserted	Allows an external crystal (XTAL) or clock to be used as the clock source for the AD7176-2 . With SL6 not inserted, a crystal is connected to the AD7176-2 . With SL6 in Position B, an external clock source can be supplied to the ADC.
SL8	B	With SL8 in Position A, the AIN1 analog input on the AD7176-2 device is connected to Connector J8. With SL8 in Position B, the analog input applied via Connector J8 is buffered using the AD8656 before being applied to the AIN1 pin. With SL8 in Position C, the analog input path includes the ADA4940-1 differential amplifier. In conjunction with AIN0, a single-ended to differential driver is implemented. With SL8 in Position D, AIN1 is connected to Header J10.

Link No.	Default Option	Description
SL9	B	With SL9 in Position A, the AIN2 analog input on the AD7176-2 device is connected to Connector J8. With SL9 in Position B, the analog input applied via Connector J8 is buffered using the AD8656 before being applied to the AIN2 pin. With SL9 in Position C, the analog input path includes the AD8475 amplifier. In conjunction with AIN3, an attenuating single-ended to differential driver is implemented.
SL10	B	With SL10 in Position A, the AIN3 analog input on the AD7176-2 device is connected to Connector J8. With SL10 in Position B, the analog input applied via Connector J8 is buffered using the AD8656 before being applied to the AIN3 pin. With SL10 in Position C, the analog input path includes the AD8475 amplifier. In conjunction with AIN2, an attenuating single-ended to differential driver is implemented.
SL11	B	With SL11 in Position A, the AIN0 analog input on the AD7176-2 device is connected to Connector J8. With SL11 in Position B, the analog input applied via Connector J8 is buffered using the AD8656 before being applied to the AIN0 pin. With SL11 in Position C, the analog input path includes the ADA4940-1 differential amplifier. In conjunction with AIN1, a single-ended to differential driver is implemented. With SL11 in Position D, AIN0 is connected to Header J10.
AVSS to AGND		When AVSS and AGND are inserted, AVSS is tied to AGND. When AVSS is set to -2.5 V, these links must be removed.

SOCKETS AND ON-BOARD CONNECTORS

Table 2. Connector Details

Connector	Function	Connector Type	Manufacturer	Manufacturer Number	Order Code ¹
J1	Connector to the EVAL-SDP-CB1Z	120-way connector, 0.6 mm pitch	Hirose	FX8-120S-SV(21)	FEC1324660
J2	External MCLK input	Straight printed circuit board (PCB), surface-mount Type B/Type A (SMB/SMA) jack	TE Connectivity	1-1337482-0	Not applicable
J3	External bench top voltage supply for the EVAL-AD7176-2SDZ	Power socket block, 3-pin, 3.81 mm pitch	Phoenix Contact	MC 1,5/3-G-3,81	FEC3704737
J5	External ac to dc adapter input for the EVAL-AD7176-2SDZ , 7 V to 9 V	DC power connectors, 2 mm surface-mount technology (SMT) power jack	Kycon	KLDX-SMT2-0202-A	MOUSER 806-KLDX-SMT20202A
J6	Analog input terminal block, wired connection to external source or sensor	Power socket block, 8-pin, 3.81 mm pitch	Phoenix Contact	MC 1,5/8-G-3,81	FEC3704774
J9	External bench top voltage supply option for AVDD1/AVDD2, IOVDD, and AVSS inputs on the AD7176-2	Screw terminal block, 3.81 mm pitch	Phoenix Contact	MKDS 1/4-3.81	FEC3704592
J10	External amplifier connector	7-way, 2.54 mm pin header	Samtec	SSW-107-01-T-S	FEC1803478
J13	Connects to AIN0/AIN1 analog inputs of ADC	7-way, 2.54 mm socket	Samtec	TLW-107-05-G-S	FEC1668499
A0 to A4	Analog inputs to ADC	Straight PCB mount SMB/SMA jack	TE Connectivity	1-1337482-0	Not applicable

¹ Order codes starting with FEC are for Farnell.

POWER SUPPLIES

The [EVAL-AD7176-2SDZ](#) evaluation board requires that an external power supply, either a bench top supply or a wall wart (dc plug) supply, be applied to J4 or J5 (see Table 3 for more information). Linear regulators generate the required power supply levels from the applied power supply (V_{IN}) rail. The regulators used are the 5 V [ADP1720](#) (U7) and the 2.5 V [ADP1720](#) (U4), which supply 5 V and 2.5 V, respectively, to AVDD1 and AVDD2 of the ADC. The 3.3 V [ADP1720](#) (U10) delivers 3.3 V to the IOVDD pin of the [AD7176-2](#).

When a split power supply is used, the AVSS voltage must be applied from an external source via Connector J9. AVDD1/AVDD2 and IOVDD can also be provided via Connector J9. However, the 7 V to 9 V supply is still required because the on-board reference ([ADR445](#)) is supplied from this power supply.

Each supply is decoupled at the point where it enters the [EVAL-AD7176-2SDZ](#) evaluation board and again at the point where it connects to each device (see the schematics shown in Figure 27 to Figure 31 to identify decoupling points).

SERIAL INTERFACE

The [EVAL-AD7176-2SDZ](#) evaluation board connects via the SPI to the Blackfin® [ADSP-BF527](#) on the [EVAL-SDP-CB1Z](#) evaluation board. There are four primary signals: CS, SCLK,

DIN, and DOUT/ \overline{RDY} (all are inputs, except for DOUT/ \overline{RDY} , which is an output).

To operate the [EVAL-AD7176-2SDZ](#) evaluation board in standalone mode, the [AD7176-2](#) serial interfacelines can be disconnected from the 120-pin header of the [EVAL-SDP-CB1Z](#) evaluation board by removing the 0 Ω links, R9 through R13. The test points can then be used to fly wire the signals to an alternative digital capture setup.

ANALOG INPUTS

The two ways to apply the [EVAL-AD7176-2SDZ](#) evaluation board primary analog inputs include the following:

- J8, the green screw in the terminal connector on the right side of the board.
- The A0 to A4 SMB/SMA footprints on the [EVAL-AD7176-2SDZ](#) evaluation board.

The AIN0 to AIN3 analog inputs are routed via the [AD8656](#) buffers to the associated input pins on the [AD7176-2](#), and the AIN4 analog input is connected to Connector J8 if LK5 to LK9 are removed, disabling the on-board noise test. The buffers are configured for a gain of 2.

The [AD717x Eval+](#) software is set up to analyze dc inputs to the ADC.

Table 3. Required External Power Supply¹

V_{IN} Applied	Voltage Range (V)	Function
J4	7 to 9	Bench top supply to the EVAL-AD7176-2SDZ evaluation board. Supplies LDOs that create 5 V, 2.5 V, and 3.3 V rails. The J4 supply also supplies the ADR445 external reference. Ensure that LK2 is set to Position A when the external power supply is applied to this connector.
J5	7 to 9	Wall wart (dc plug) supply to the EVAL-AD7176-2SDZ evaluation board. Supplies LDOs that create 5 V, 2.5 V, and 3.3 V rails. The J5 supply also supplies the ADR445 external reference. Ensure that LK2 is set to Position B when the external power supply is applied to this connector.

¹ Only a single supply is required, either J4 or J5. This supply can be selected using LK2.

REFERENCE OPTIONS

The [EVAL-AD7176-2SDZ](#) evaluation board includes an external 5 V reference (the [ADR445](#)) and an internal 2.5 V reference. The default operation on the [AD7176-2](#) uses the internal 2.5 V reference.

The reference used for a conversion is selected by choosing the reference in the SETUPCONx registers associated with Setup 1, Setup 2, Setup 3, and Setup 4.

Switch between using the internal reference and external reference by accessing the [AD7176-2](#) register map via the [AD717x Eval+](#) software.

USING THE ON-BOARD AMPLIFIERS

The [EVAL-AD7176-2SDZ](#) evaluation board contains three front-end configurations. The [AD8656](#) is provided for buffering the analog inputs of the [AD7176-2](#). By default, the [AD8656](#) is configured for a gain of 2, and the front end is selected on the [EVAL-AD7176-2SDZ](#) evaluation board. The [ADA4940-1](#) amplifier provides a single-ended to differential driver, whereas the [AD8475](#) is configured to operate as an attenuating single-ended to differential driver. Figure 3 shows the location of the resistor and capacitor (R/C) components on the [EVAL-AD7176-2SDZ](#) evaluation board. Figure 4 and Figure 5 highlight the R/C components populated on the [EVAL-AD7176-2SDZ](#) evaluation board for each amplifier, and Table 4 to Table 6 list the component values.

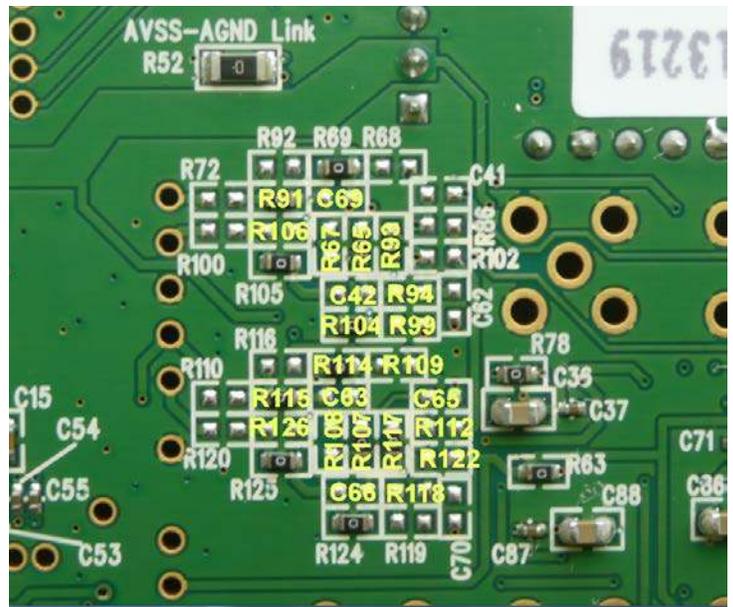

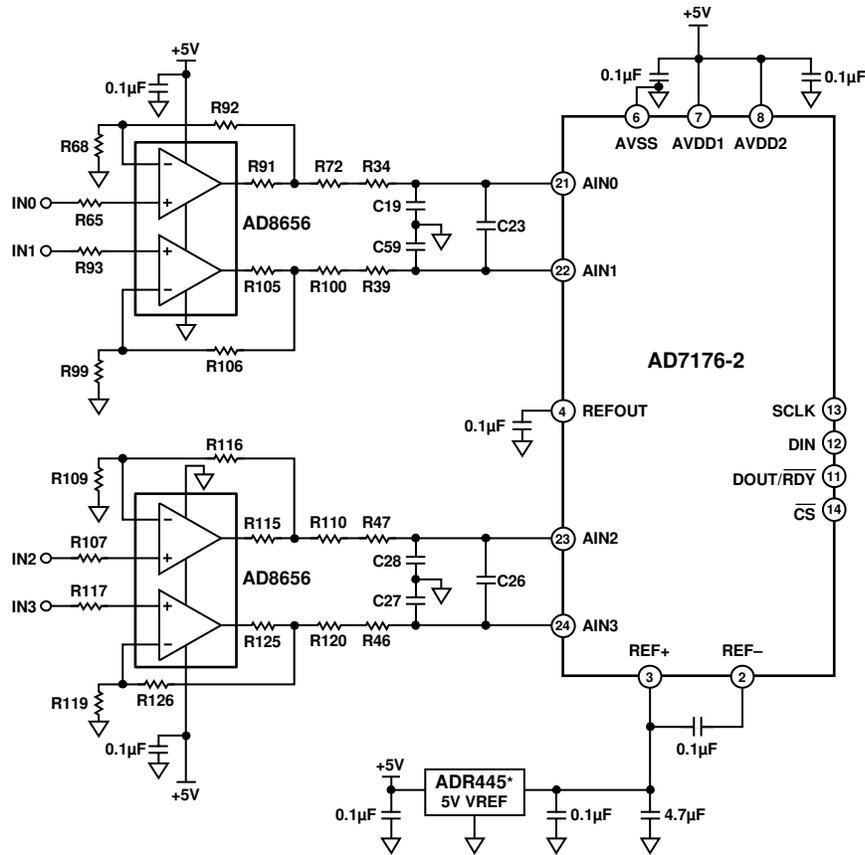

Figure 3. Identification of R/C Components for the Amplifiers

*USING ADR444 (4.096V REFERENCE) IN PLACE OF THE ADR445 ALLOWS THE ENTIRE CIRCUIT TO BE OPERATED FROM A SINGLE +5V SUPPLY RAIL.

EVALUATION BOARD SOFTWARE SOFTWARE INSTALLATION

The **EVAL-AD7176-2SDZ** evaluation kit includes software on a CD. Double click the **setup.exe** file from the CD to run the installer. The default installation location for the software is **C:\Program Files (x86)\Analog Devices\AD717xEval+**.

Install the **AD717x Eval+** software before connecting the **EVAL-AD7176-2SDZ** evaluation board and the **EVAL-SDP-CB1Z** evaluation board to the USB port of the PC to ensure that the evaluation system is correctly recognized when connected to the PC. Install the following two parts:

1. **AD717x Eval+** software installation
2. **AD717x Eval+ Dependencies**
 - a. **EVAL-SDP-CB1Z** board drivers
 - b. **Ssrc SVG Plugin**
 - c. Microsoft **.NET Framework 3.5**

WARNING

To ensure that the PC correctly recognizes the evaluation system, the evaluation software drivers must be installed before connecting the **EVAL-AD7176-2SDZ** evaluation board and the **EVAL-SDP-CB1Z** evaluation board to the USB port of the PC.

INSTALLING THE AD717X EVAL+ SOFTWARE

To install the **AD717x Eval+** software, take the following steps:

1. With the **EVAL-SDP-CB1Z** evaluation board disconnected from the USB port of the PC, insert the CD into the CD ROM drive.
2. Double click the **setup.exe** file to begin the evaluation board software installation. The default installation location for the software is **C:\Program Files\Analog Devices\AD717x Eval+**.
3. A dialogue box appears asking for permission to allow the program to make changes to the PC (see Figure 6). Click **Yes**.

Figure 6. **User Account Control**, Permission Dialog Box

4. Select a location to install the software and click **Next**. Figure 7 shows the default locations displayed when the dialogue box opens. To select another location, click **Browse**.

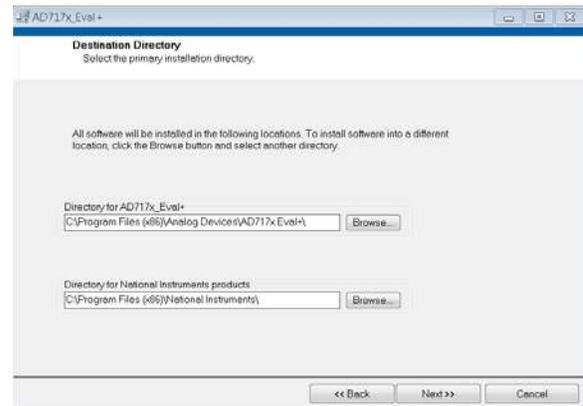

Figure 7. **AD717x Eval+**, Selecting the Location for Software Installation

5. A license agreement appears. Read the agreement, select **I accept the License Agreement**, and click **Next**.

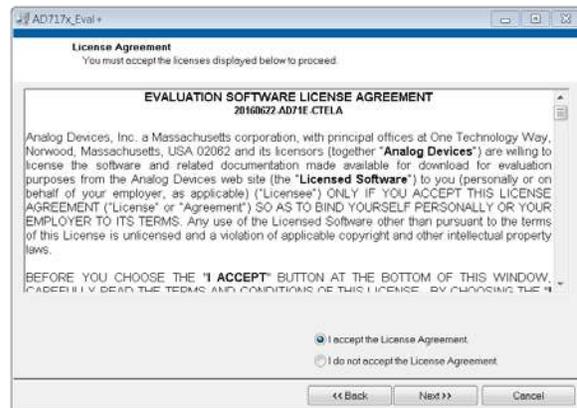

Figure 8. **AD717x Eval+**, Accepting the License Agreement

6. A summary of the installation displays. Click **Next** to continue.

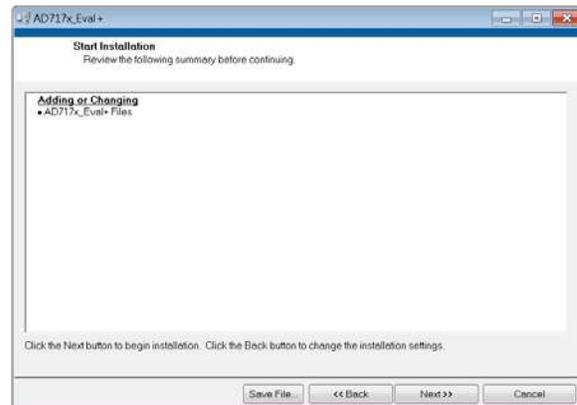

Figure 9. **AD717x Eval+**, Reviewing a Summary of the Installation

- The message in Figure 10 appears when the installation is complete. Click **Next** to continue.

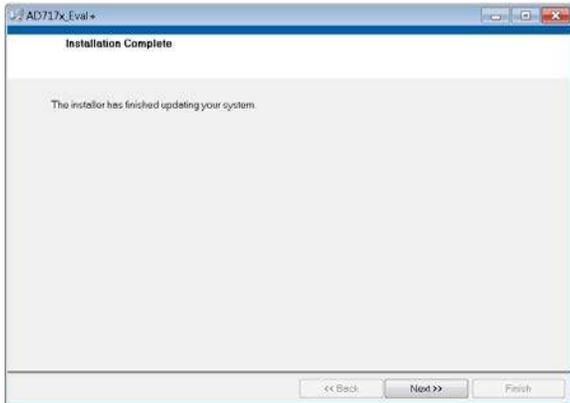

Figure 10. AD7176x Eval+ Installation Complete

INSTALLING THE EVAL+ DEPENDENCIES

After the installation of the evaluation software is complete, use the following procedure to install the **Eval+ Dependencies**:

- With the **EVAL-SDP-CB1Z** evaluation board still disconnected from the USB port of the PC, make sure all other applications are closed, and then click **Install**.

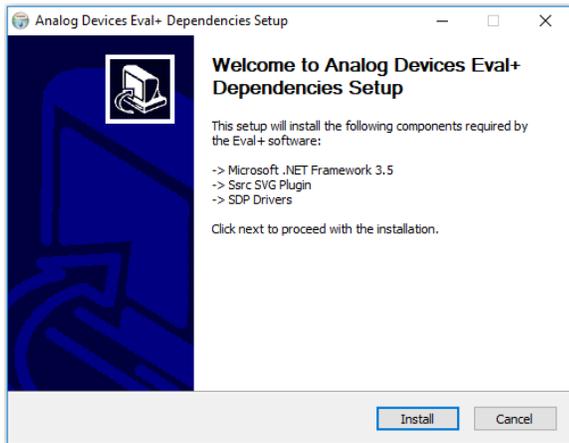

Figure 11. Eval+ Dependencies Setup, Beginning the Drivers Installation

- The **Src SVG Plugin** installs first, the **SDP Drivers**, and finally the **.NET Framework 3.5**.
- If you are using Windows 8 or Windows 10, see the **Installing .NET Framework 3.5 on Windows 8/Windows 10** section.
- To complete the drivers installation and close the installation setup wizard, click **Close**.

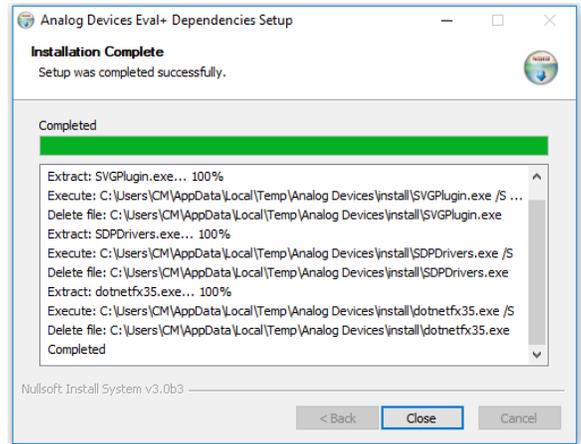

Figure 12. Eval+ Dependencies Setup, Completing the Drivers Setup Wizard

- Before using the **EVAL-AD7176-2SDZ** evaluation board, you must restart the PC.

Figure 13. Restarting the PC

INSTALLING .NET FRAMEWORK 3.5 ON WINDOWS 8/WINDOWS 10

Windows 8 and Windows 10 have a built in installer for the **.NET Framework 3.5**. To run this, an internet connection is needed, as well as administrator privileges. If the following steps do not work, contact a system administrator:

- When the **Eval+ Dependencies** installer reaches the **.NET Framework 3.5**, the window shown in Figure 14 appears.

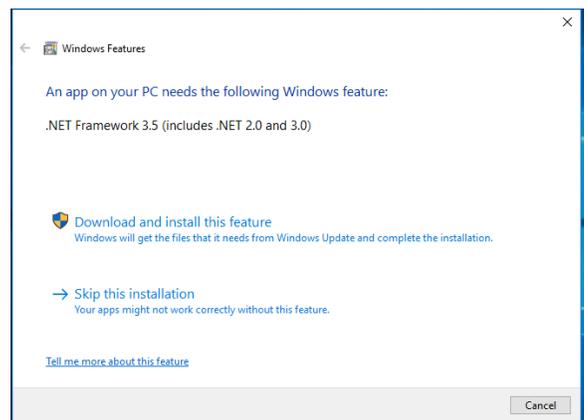

Figure 14. Windows 8/10 .NET Framework 3.5 Installation

- Follow the steps in the installation setup wizard to complete the installation.
- If the wizard does not appear, then **.NET Framework 3.5** may already be installed. To check, open **Control Panel > Programs > Programs and Features** and select **Turn**

Windows features on or off. In the window that appears, look for **.NET Framework 3.5** and check that it is enabled.

SETTING UP THE SYSTEM FOR DATA CAPTURE

After completing the steps in the Evaluation Board Hardware and the Software Installation sections, set up the system for data capture using the following:

1. Allow the **Found New Hardware Wizard** to run after the [EVAL-SDP-CB1Z](#) evaluation board is connected to the PC. If using Windows XP, search for the [EVAL-SDP-CB1Z](#) drivers. Choose to automatically search for the drivers if prompted by the operating system.
2. Check that the [EVAL-AD7176-2SDZ](#) evaluation board is connecting to the PC correctly using the **Device Manager**. Access the **Device Manager** by completing the following steps:
 - a. Right click **My Computer** and then click **Manage**.
 - b. A dialog box appears asking for permission to allow the program to make changes to the PC. Click **Yes**.
 - c. The **Computer Management** window appears. Click **Device Manager** from the list of **System Tools** (see Figure 15).
 - d. The [EVAL-SDP-CB1Z](#) evaluation board appears under **ADI Development Tools**, which indicates that the driver software has installed and that the [EVAL-SDP-CB1Z](#) evaluation board is connecting to the PC correctly.

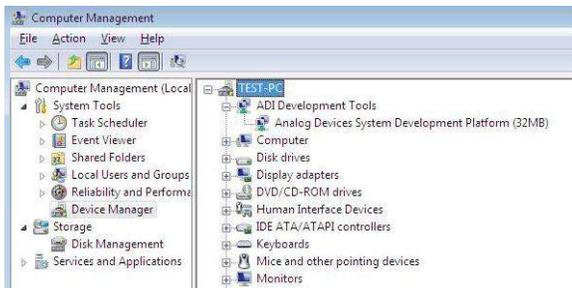

Figure 15. **Device Manager**, Checking the Board Connects to the PC Correctly

LAUNCHING THE SOFTWARE

After completing the steps in the Setting Up the System for Data Capture section, launch the **AD717x Eval+** software using the following steps:

1. From the **Start** menu, click **Programs > Analog Devices > AD717x_Eval+ > AD717x Eval+**.
2. The dialogue box in Figure 16 appears. Select **AD7176-2 Evaluation Board**. The main window of the software box displays as shown in Figure 19.

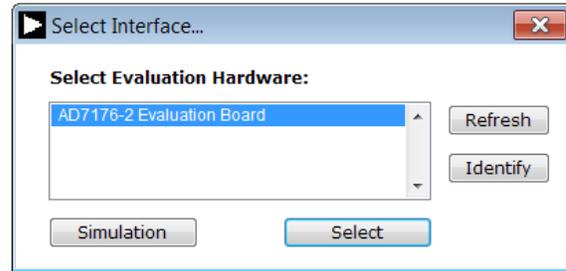

Figure 16. [AD7176-2](#) Evaluation Board Selection

3. If the [EVAL-AD7176-2SDZ](#) evaluation system is not connected to the USB port via the [EVAL-SDP-CB1Z](#) evaluation board when the software is launched, the software displays the dialog box shown in Figure 17. Connect the [EVAL-SDP-CB1Z](#) evaluation board to the USB port of the PC. Wait a few seconds, click **Refresh** and the option shown in Figure 16 appears.

Figure 17. Evaluation Board Selection, No Board Connected

4. The **AD717x Eval+** can also be used without connecting hardware. Click the **Simulation** button and the options shown in Figure 18 appear. The **Simulation** mode uses a software model and allows the [AD7172-2](#), [AD7172-4](#), [AD7173-8](#), [AD7175-2](#), [AD7175-8](#), [AD7176-2](#), or [AD7177-2](#) to be evaluated.

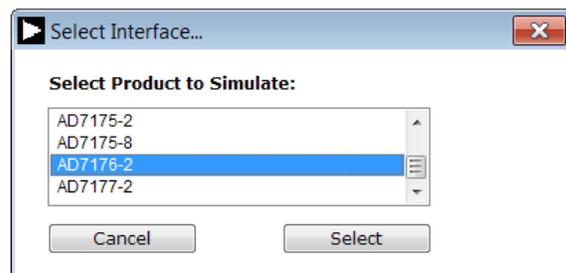

Figure 18. Evaluation Board Selection Simulation

EVALUATION BOARD SOFTWARE OPERATION

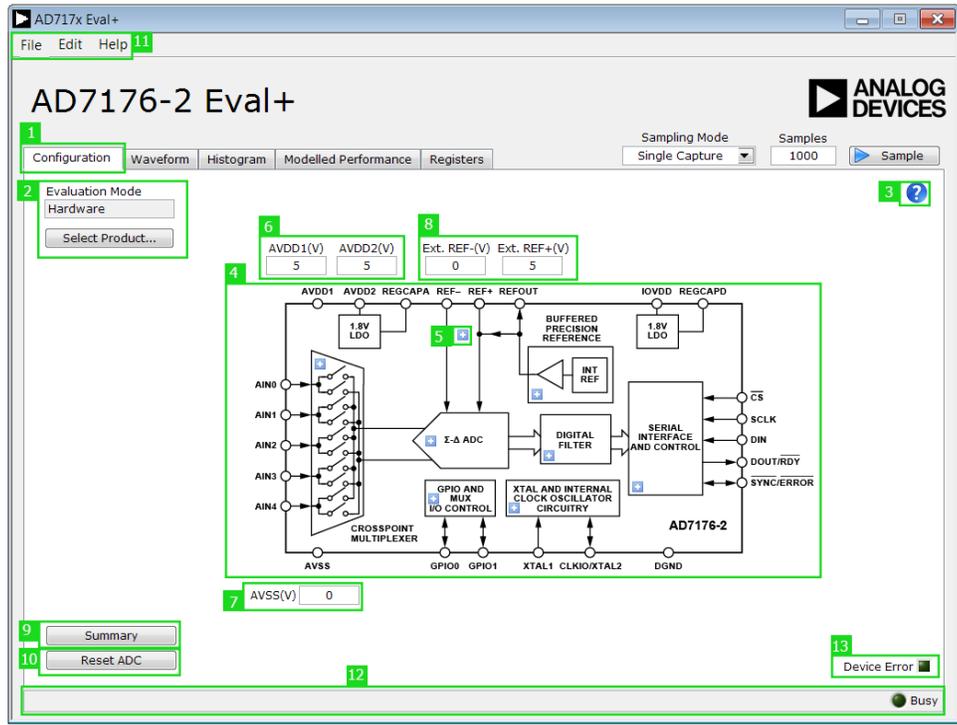

Figure 19. Configuration Tab of the AD7176-2 Evaluation Software in Hardware Mode

OVERVIEW OF THE MAIN WINDOW

The main window of the AD717x Eval+ software displays the significant control buttons and analysis indicators of the AD717x Eval+ software. This window is divided into five tabs.

- **Configuration** (1)
- **Waveform** (18)
- **Histogram** (28)
- **Modelled Performance** (31)
- **Registers** (45)

Configuration (1) Tab

Figure 19 shows the **Configuration** (1) tab when **Hardware** mode is selected, and Figure 20 shows the **Configuration** (1) tab when **Simulation** mode is selected. The controls highlighted in Figure 20 are only available in **Simulation** mode.

Select Product/Evaluation Mode (2)

The **Evaluation Mode** (2) indicator displays the current evaluation mode. To switch between modes, click the **Select Product** (2) button and the dialog box shown in Figure 16 appears.

Tutorial Button (3)

Click the tutorial button (3) to open a tutorial and additional information on using the AD717x Eval+ software.

Functional Block Diagram (4)

The functional block diagram (4) of the ADC shows each of the separate functional blocks within the ADC. Clicking a configuration button on any of the functional blocks opens the configuration pop up window for the block selected. Not all blocks have a configuration button.

Configuration Pop Up Button (5)

Each configuration pop up button (5) opens a different window that allows the configuration of the relevant functional block.

Analog and Digital Supply Voltages (6, 7, and 14)

Use these input fields to record the supply voltage levels selected for the AD7176-2. Checks are performed to ensure that the power supply voltage levels entered are within the specified limits. These power supply voltage levels are also used for the modeled performance to calculate the power dissipation.

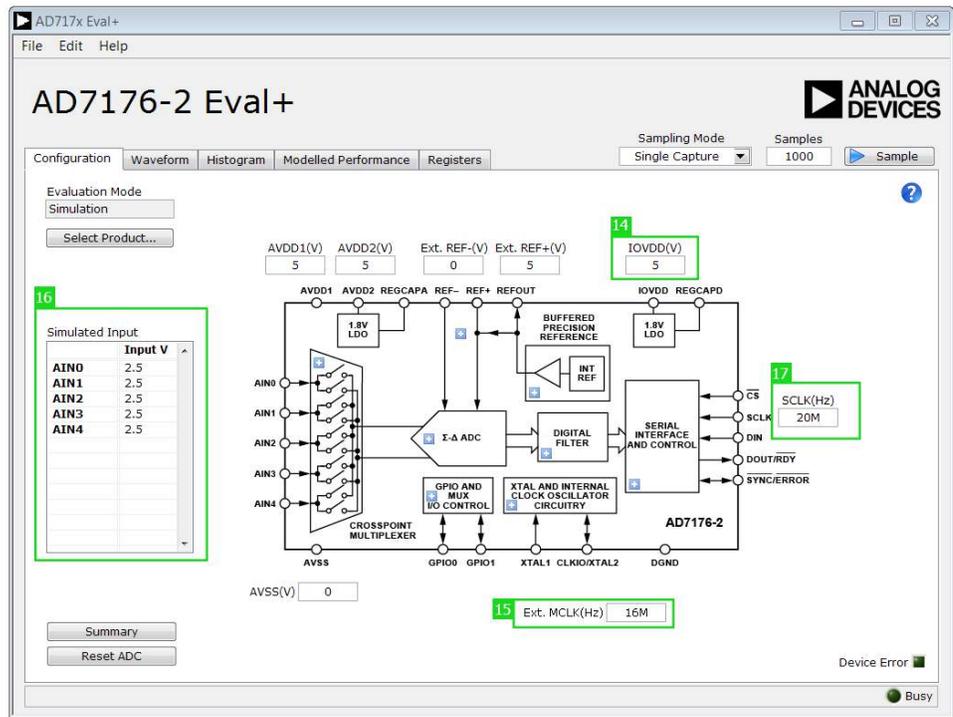

Figure 20. Configuration Tab of the AD7176-2 Evaluation Software in Simulation Mode

External Reference (Ext. REF-(V) and Ext. REF+(V)) (8)

The **Ext. REF-(V)** (8) and **Ext. REF+(V)** (8) input fields set the positive and negative external reference voltage values (see Figure 19). The difference is used in calculating the results for both the **Waveform** (18) and **Histogram** (28) tabs, shown in Figure 21 and Figure 22, respectively. The **EVAL-AD7176-2SDZ** evaluation board has an external 5 V **ADR445** reference that can be bypassed by removing R32. Change the external reference voltage value in **Ext. REF-(V)** (8) and **Ext. REF+(V)** (8) to ensure correct calculation of results in the **Waveform** (18) and **Histogram** (28) tabs.

Register Configuration Summary (9)

Click the **Summary** (9) button to display the selected configuration of the **AD7176-2**. Configurations include channel configuration, information on each of the individual setups, as well as information on any error present (see Figure 19).

Reset ADC (10)

Click the **Reset ADC** (10) button, shown in Figure 19, to perform a software reset of the **AD7176-2**. The **AD7176-2** does not have a hardware reset pin. To perform a hard reset, the power must be removed from the **EVAL-AD7176-2SDZ** evaluation board. The software reset has the same effect as a hard reset.

Menu Bar (11)

The menu bar (11), shown in Figure 19, has three sections: **File**, **Edit**, and **Help**.

File

Three options are available in the **File** menu: **Save**, **Load**, and **Exit**

Save

In **Save**, register configurations or waveform data can be saved. Register configurations can be saved as a JSON file or a header file. If the configuration is only used in the **AD717x Eval+** software environment, the recommended setting to use is the JSON. Waveforms are saved as .csv files, and there is a prompt to save the register configuration as well.

Load

In **Load**, saved register configurations or waveform data can be loaded. To load a header file into **AD717x Eval+**, the header must be in the same format as one that is saved from **AD717x Eval+**. The header file can be used when developing firmware. When loading the waveform data, there is a prompt to load the register configuration so that the software can correctly analyze the data.

Exit

Click **Exit** to close the **AD717x Eval+** software.

Edit

Two options are available in the **Edit** dropdown menu: **Change Product Selection** and **Reset ADC**. **Change Product Selection** performs the same action as the **Select Product** (2) control and **Reset ADC** performs the same action as the **Reset ADC** (10) button (see Figure 19).

Help

The **Help** dropdown menu provides links to extra information about the [AD7176-2](#), which includes links to the product page, [EVAL-AD7176-2SDZ](#) evaluation board user guide, data sheet, and No OS drivers. Selecting the **AD717x Eval+** tutorial opens the tutorial outlined in the Tutorial Button (3) section. For details on the version of the software, the **About** option opens a dialog box displaying the current version of the software and the relevant licenses.

Status Bar (12)

The status bar (12) displays the busy indicator and status updates, such as **Analysis Completed** and **Reset Completed** during software use (see Figure 19).

Device Error (13)

The **Device Error** (13) light emitting diode (LED) icon, shown in Figure 19, illuminates when a when an ADC error is detected or when a cyclic redundancy check (CRC) error occurs. The CRC functionality on the [AD7176-2](#) is disabled by default and must be enabled for this indicator to work. More specific information on the error can be found in the Register Configuration Summary (9) section.

External MCLK Frequency (15)

This field sets the external MCLK frequency (15) (see Figure 20). The external MCLK frequency is only visible on the front panel when an external clock source is selected by the ADC. The external MCLK frequency is used by the functional model for the **Modelled Performance** (31) tab, shown in Figure 23.

Analog Input Voltage (16)

These input fields are only available when the **AD717x Eval+** software is executed in **Simulation** mode. These inputs allow

the analog input voltages (16) to be set and can be changed at any time while in **Simulation** mode (see Figure 20).

External SCLK Frequency (17)

This input field sets the external **SCLK** frequency (17) for the SPI interface. This field is only available in **Simulation** mode to determine if the **SCLK** frequency (17) is within the permitted range (see Figure 20).

WAVEFORM TAB (18)

Figure 21 shows the **Waveform** (18) tab of the **AD717x Eval+** Software.

Sampling Mode (19)

This control, shown in Figure 21, is unrelated to the ADC mode. A defined sample set can be captured in a single capture, or batches of samples can be continuously gathered in a repeated capture. Data logging that runs like repeated capture but posts the results to a .csv file can also be selected. When saving, the .csv file prompts to save the register configuration, which is necessary for the analysis of the data to load back into the software.

Samples (20)

The **Samples** (20) numeric control sets the number of **Samples** (20) gathered per batch. Single capture returns the number entered in the **Samples** (20) control. A repeated capture keeps returning batches of the number in **Samples** (20) until stopped (see Figure 21).

Sample (21)

Click the **Sample** (21) button to start gathering ADC results. Results appear in the **Waveform** (22) graph. Both the **Sample** (21) button and the **Waveform** (22) graph are shown in Figure 21.

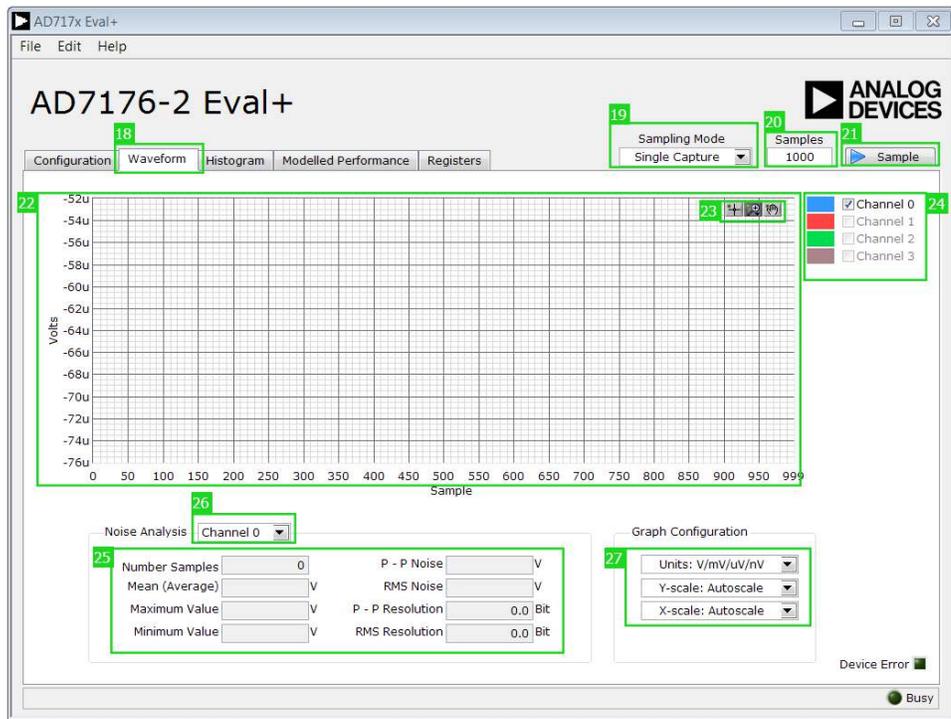

Figure 21. **Waveform** Tab of the AD7176-2 Evaluation Software

Waveform Graph and Controls (22 and 23)

The data **Waveform** (22) graph shows each successive sample of the ADC output. Zoom in on the data using the control toolbar (23). Click the x-axis and y-axis to change the scales on the graph. (see Figure 21).

Channel Selection (24)

The channel selection (24) control, shown in Figure 21, allows you to choose which channels display on the data **Waveform** (22) graph. These controls only affect the display of the channels and do not have any effect on the channel settings in the ADC register map.

Noise Analysis (25)

The **Noise Analysis** (25) section displays the results of the **Noise Analysis** (25) for the selected analysis channel; this section includes both noise and resolution measurements (see Figure 21).

Analysis Channel (26)

The **Noise Analysis** (25) section and **Histogram** (29) graph (see Figure 22) show the analysis of the channel selected via the analysis channel dropdown menu, shown in Figure 21.

Display Units and Axis Controls (27)

Click the **Units** (27) dropdown menu to select the unit the data displays in the graph. This control affects both the **Waveform** (22) graph and the **Histogram** (29) graph. The axis controls can switch between **Dynamic** and **Fixed**. When **Dynamic** is selected, the axis automatically adjusts to show the entire range of the ADC results after each batch of samples. When **Fixed** is selected, the axis ranges can be programmed. The axis ranges do not automatically adjust after each batch of samples (see Figure 21).

HISTOGRAM TAB (28)

Figure 22 shows the **Histogram** (28) tab of the AD717x Eval+ software.

Histogram Graph and Controls

The data **Histogram** (29) graph shows the number of times each sample of the ADC output occurs. The control toolbar (30) in the **Histogram** (29) graph allows you to zoom in on the data. Click the x-axis and y-axis to change the scales on the graph (see Figure 22).

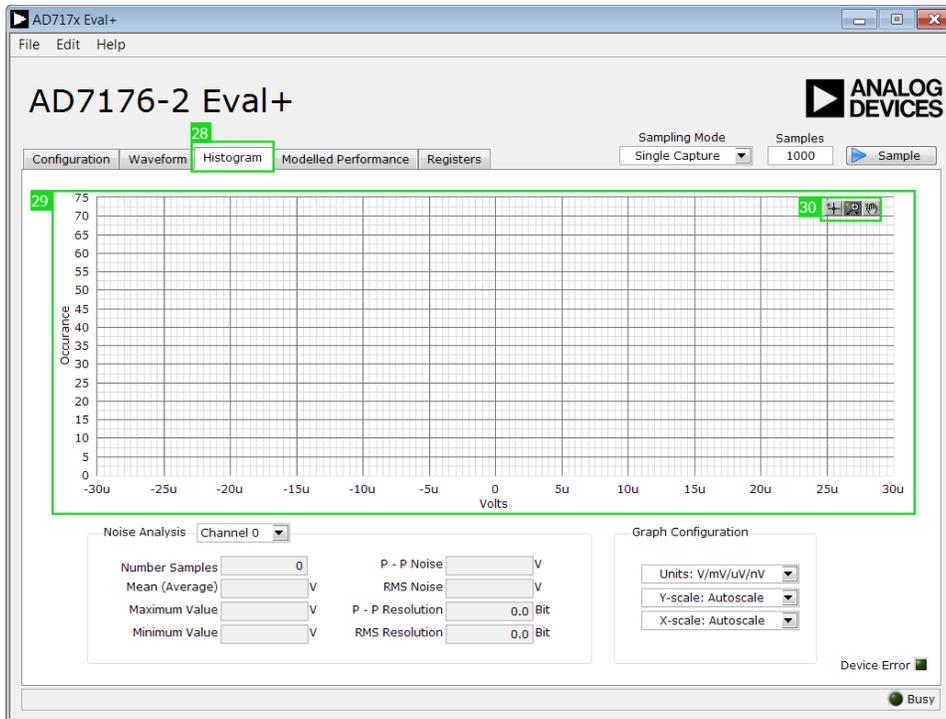

Figure 22. Histogram Tab of the AD7176-2 Evaluation Software

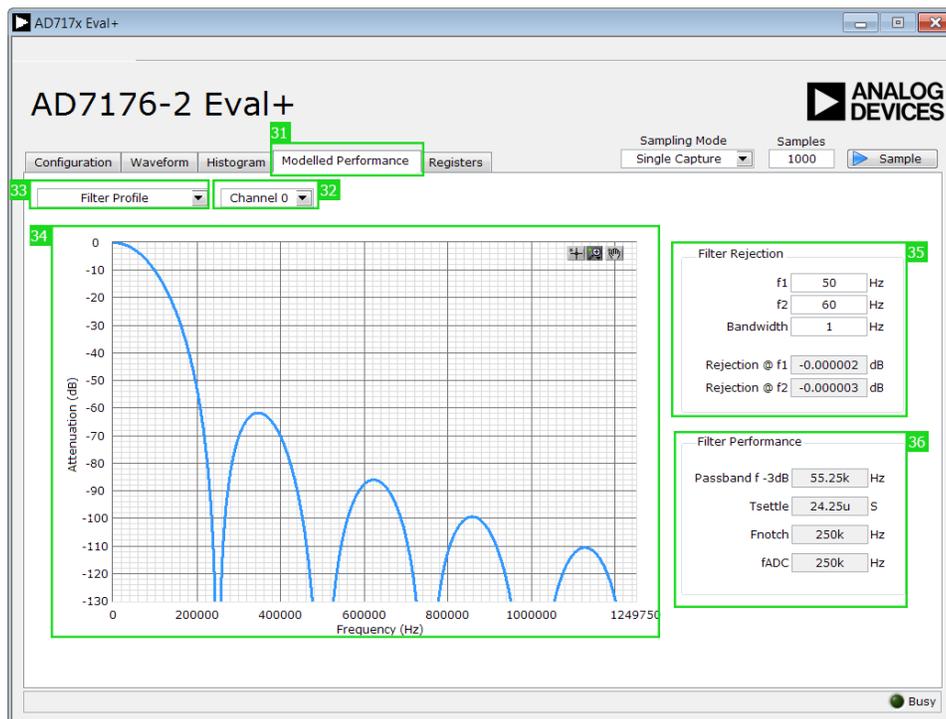

Figure 23. Filter Profile of the AD7176-2 Evaluation Software

MODELLED PERFORMANCE TAB (31)

The **Modelled Performance** (31) tab shows a number of ADC performance parameters, which are calculated using the ADC functional model. There are three main sections to the **Modelled Performance** (31) tab: **Filter Profile** (33), **Filter Step Response** (37) (see Figure 24), and **Timing Diagram / Power** (42) (see

Figure 25). These can be selected using the dropdown menu (33) (see Figure 23).

Analysis Channel (32)

The analysis channel (32) dropdown menu selects the channel to be evaluated by the functional model (see Figure 23).

Filter Profile (33)

This dropdown menu gives the ability to switch between the three sections of the **Modelled Performance** (31) tab. Figure 23 shows the tab when **Filter Profile** (33) is selected.

Filter Profile Graph (34)

This graph shows the frequency response for the selected digital filter. The graph controls give the ability to zoom in on the data. Click the x-axis and y-axis to change the scales on the graph (see Figure 23).

Filter Rejection (35)

This section shows the rejection/attenuation of the digital filter over the **Rejection @ f1** bandwidth and the **Rejection @ f2** bandwidth in decibels. The **f1**, **f2**, and **Bandwidth** values can be changed (see Figure 23).

Filter Performance (36)

This section shows timing information about the data rate of the selected output. The **Filter Performance** (36) shows the ADC initial settling time (**Tsettle**), the first frequency notch (**Fnotch**), and the actual sampling frequency (**fADC**) (see Figure 23).

Filter Step Response (37)

This dropdown menu gives the ability to switch between the three sections of the **Modelled Performance** (31) tab (see see Figure 23). Figure 24 shows the tab when **Filter Step Response** (37) is selected.

Step Response Graph (38)

This graph shows how long the filter takes to settle when the voltage is stepped from one voltage to the next. For this analysis, it is assumed the ADC is continuously converting on only one channel (see Figure 24).

Step Configuration (39)

Step Configuration (39) gives the ability to set the **Voltage before Step**, the **Voltage after Step**, and the **Step Position**. **Step Position** is set as a percentage where 0% is 1/fADC and 100% is 2/fADC (see Figure 24).

Step Response (40)

This section shows timing information about the data rate of the output selected output. The **Step Response** (40) shows the actual sampling frequency, **fADC**, the ADC initial settling time (**tSettle**), and the settling time between conversions, **1/fADC** (see Figure 24).

Graph Units (41)

Use this control to switch the step response between **Percentages**, **Volts**, and **Codes** (see Figure 24).

Figure 24. Filter Step Response of the AD7176-2 Evaluation Software

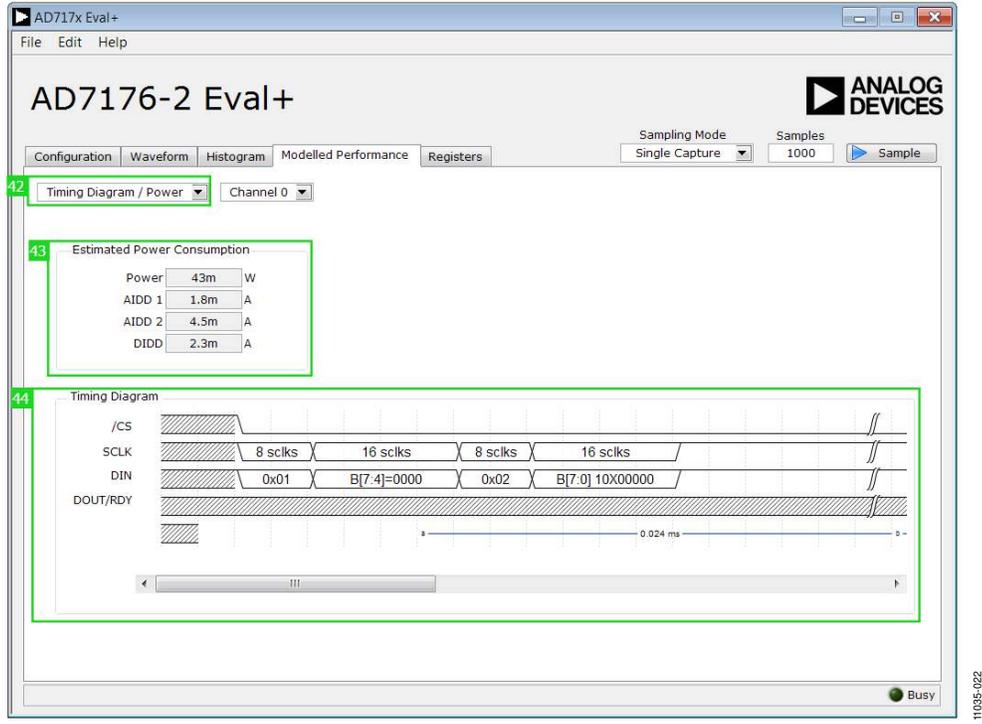

Figure 25. **Timing Diagram / Power** of the **AD7176-2** Evaluation Software

Timing Diagram / Power (42)

This dropdown menu gives the ability to switch between the three sections of the **Modelled Performance** (31) tab. Figure 25 shows the tab when **Timing Diagram / Power** (42) is selected.

Estimated Power Consumption (43)

This section shows the total power consumption of the device in the current configuration as well as the current consumption on each of the power supply rails. Note that the **Estimated**

Power Consumption (43) feature is for continuous conversion mode only, and no other mode of operation is supported (see Figure 25).

Timing Diagram (44)

This graph shows the digital interface **Timing Diagram** (44) for the current configuration. The graph shows the timing for both the configuration of the ADC and the subsequent data reads from the ADC (see Figure 25).

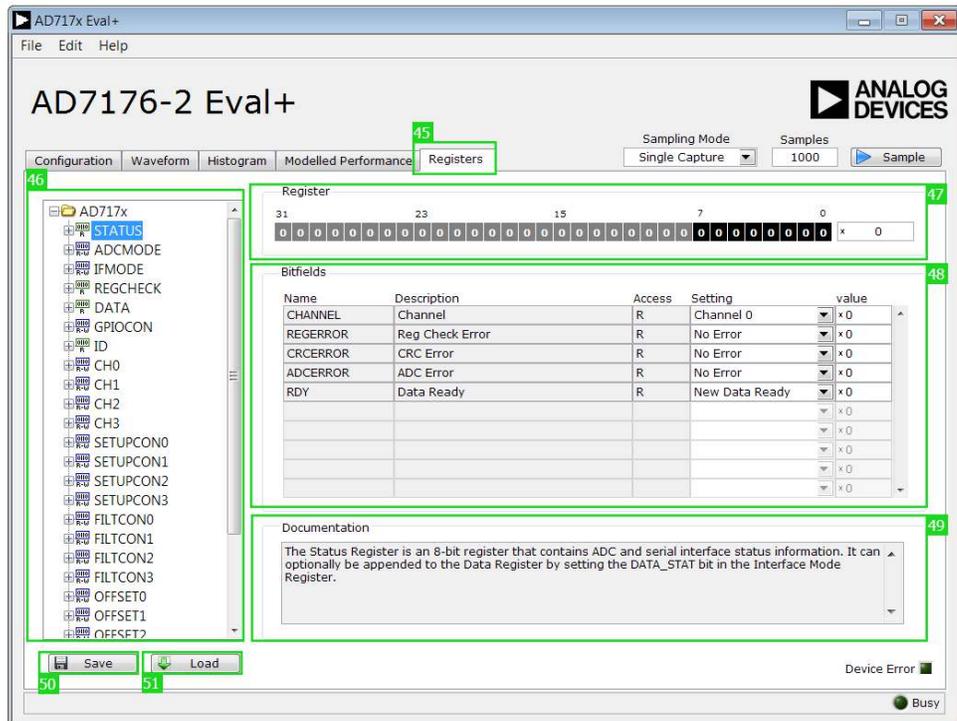

Figure 26. **Registers** Tab of the *AD7176-2* Evaluation Software

REGISTERS TAB (45)

Figure 26 shows the **Registers** (45) tab.

Register Tree (46)

This control shows the full register map in a tree. Each register is shown. Click the expand button next to each register to show all the **Bitfields** (48) contained within that register.

Register (47)

The **Register** (47) control allows you to change the individual bit of the register selected in the register tree (46) by clicking the bits, or by programming the register value directly into the number control field on the right.

Bitfields (48)

This list shows all the **Bitfields** (48) of the register selected in the register tree (46). Change the values by using the dropdown

menu or by directly entering a value into the number control field on the right.

Documentation (49)

The **Documentation** (49) field contains the **Documentation** (49) for the register or bit field selected in the register tree (46).

Save (50) and Load (51)

The **Save** (50) and **Load** (51) buttons allow the user to save the current configuration of the *AD7176-2* by saving off of the register map setting to a file and load the setting from that same file. When using these buttons, the register configurations are saved and loaded as JSON files.

EXITING THE SOFTWARE

To exit the software, click the close button at the top right corner of the *AD717x Eval+* software (see Figure 26).

NOTES

**ESD Caution**

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
