SKY66121-11: 169 to 170 MHz Transmit / Receive Front-End Module

Applications

- Automated meter reading
- Advanced metering infrastructure
- ISM systems

Features

- Transmit output power: >+30 dBm
- High efficiency PA
- Receive loss with filter: 0.9 dB
- Sleep mode current: < 1 μ A
- Integrated control logic
- Small footprint MCM (16-pin, 4 x 4 mm) package (MSL3, 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Description

The SKY66121-11 is a high-performance, transmit / receive (Tx / Rx) front-end module (FEM). The device includes a power amplifier (PA) capable of more than +30 dBm of transmit output power ($V_{CC} = 3.6$ V).

All functionality can be controlled by a two-wire interface. The FEM can be placed in a deep “sleep” mode, drawing less than 1 μ A of current.

The receive chain consists of a low-loss single-pole, double-throw (SPDT) switch. Three separate V_{CC} pins enable maximum RF isolation.

The SKY66121-11 is packaged in a 16-pin, 4 x 4 mm Multi-Chip Module (MCM), which allows for a highly manufacturable low-cost solution.

A functional block diagram of the SKY66121-11 is shown in Figure 1. The 16-pin MCM package and pinout are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

Pin	Name	Description	Pin	Name	Description
1	CSD	Control, shutdown/sleep, active low	9	GND	Ground
2	TX	Transmit RF input	10	TX_IN	Transmit input. Externally filtered signal
3	CTX	Control, transmit modes	11	GND	Ground
4	RX	Receive RF output	12	GND	Ground
5	TX_ALT	Alternative transmit RF input	13	PA_OUT	PA output
6	GND	Ground	14	VCC2	Supply for second stage of PA
7	N/C	No connection	15	VCC0	Supply for logic, regulator, bias
8	ANT	Antenna I/O	16	VCC1	Supply for first stage of PA

Technical Description

The SKY66121-11 consists of a complete Tx/Rx chain with Tx/Rx switches contained in the module. An SPDT switch selects between receive and transmit paths. The module has a shutdown mode to minimize power consumption.

Two digital input control pins (CSD and CTX) are used to select between shutdown or Tx/Rx, respectively.

The transmit path contains a PA optimized for saturated performance. The PA can be passed through an external impedance matching network and harmonic filter before being fed through the SPDT switch. External inductors for each of the two PA stages provide maximum application flexibility.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY66121-11 are provided in Table 2. The recommended operating conditions are specified in Table 3 and electrical specifications are provided in Tables 4 through 7.

The state of the SKY66121-11 is determined by the logic provided in Table 8. Typical performance characteristics are shown in Figures 3 through 10.

Table 2. SKY66121-11 Absolute Maximum Ratings¹

Parameter	Symbol	Minimum	Maximum	Units
Supply voltage (Pins: VCC0, VCC1, VCC2)	VCC	-0.3	+4.4	V
Digital input voltage (Pins: CSD and CTX)	VCTL	-0.5	VCC	V
Receive RF input power, receive mode (Pin: ANT)	PIN_ANT		+15	dBm
Transmit RF input power, transmit mode (Pin: TX)	PIN_TX		-2	dBm
Output power	POUT		+31	dBm
Voltage standing wave ratio	VSWR		10:1	
Operating temperature	Tc	-40	+85	°C
Storage temperature	TSTG	-55	+150	°C

¹ Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

ESD HANDLING: Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD when handling or transporting. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD handling precautions should be used at all times.

Package Dimensions

The typical part marking for the SKY66121-11 is shown in Figure 13. The PCB layout footprint for the SKY66121-11 is provided in Figure 14. Figure 15 shows the package dimensions, and Figure 16 provides the tape and reel dimensions.

Package and Handling Information

Since the device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY66121-11 is rated to Moisture Sensitivity Level 3 (MSL3) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *PCB Design and SMT Assembly/Rework Guidelines for MCM-L Packages*, document number 101752.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format. The reel quantity is 3 Ku.
