# **Pin Descriptions**

# Notes:

- 1. The module signal ground contacts, VeeR and VeeT, should be isolated from the module case.
- This contact is an open collector/drain output and should be pulled up to the Host\_Vcc with the resistor in the range 4.7kΩ-10kΩ. Pull-ups can be connected to one or several power supplies; however, the host board design shall ensure that no module contract has voltage exceeding module VccT/R+0.5V.
- 3. Tx\_Disable is an input contact with a  $4.7k\Omega$ -10k $\Omega$  pull-up resistor to the VccT inside the module.
- MOD\_ABS is connected to the VeeT or VeeR in the SFP+ module. The host may pull the contract up to Host\_Vcc with a resistor in the range from 4.7kΩ-10kΩ. MOD\_ABS is asserted "high" when the SFP+ module is physically absent from a host slot.
- 5. Internally pulled down per SFF-8431.
