

## Ultra-Small, Low Power MEMS Oscillator for Automotive

### Features

- Automotive AEC-Q100 Qualified
- Wide Frequency Range: 2 kHz to 80 MHz
- Ultra-Low Power Consumption: 1.3 mA/1  $\mu$ A (Active/Standby)
- Ultra-Small Footprints
  - 1.6 mm x 1.2 mm
  - 2.0 mm x 1.6 mm
  - 2.5 mm x 2.0 mm
- Frequency Select Input Supports Two Pre-Defined Frequencies
- High Stability:  $\pm 20$  ppm,  $\pm 25$  ppm,  $\pm 50$  ppm
- Wide Temperature Range
  - Automotive Grade 1:  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$
  - Automotive Grade 2:  $-40^{\circ}\text{C}$  to  $+105^{\circ}\text{C}$
  - Automotive Grade 3:  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$
- Excellent Shock and Vibration Immunity
  - Qualified to MIL-STD-883
- High Reliability
  - 20x Better MTF Than Quartz Oscillators
- Supply Range of 1.71V to 3.63V
- Short Sample Lead Time: <1 week
- Lead Free & RoHS Compliant

### Applications

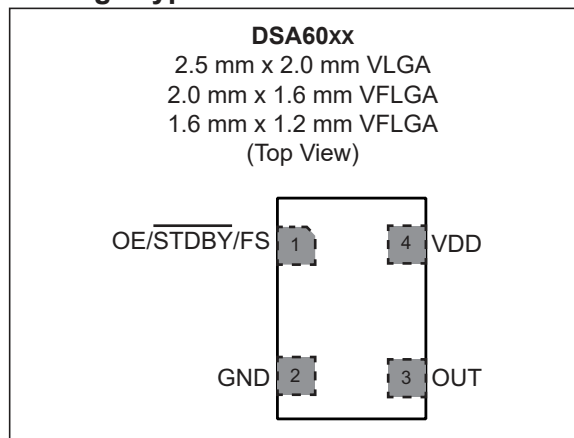

- Automotive Infotainment
- Automotive ADAS, Surround View Cameras
- In-Vehicle Networking, CAN bus, Ethernet

### General Description

The DSA60xx family of MEMS oscillators combines industry-leading low-power consumption, ultra-small packages with exceptional frequency stability, and jitter performance over temperature. The single-output DSA60xx MEMS oscillators are excellent choices for use as clock references in automotive applications in which small size, low power consumption, and long-term reliability are paramount. The device family is Automotive Grade AEC-Q100 qualified.

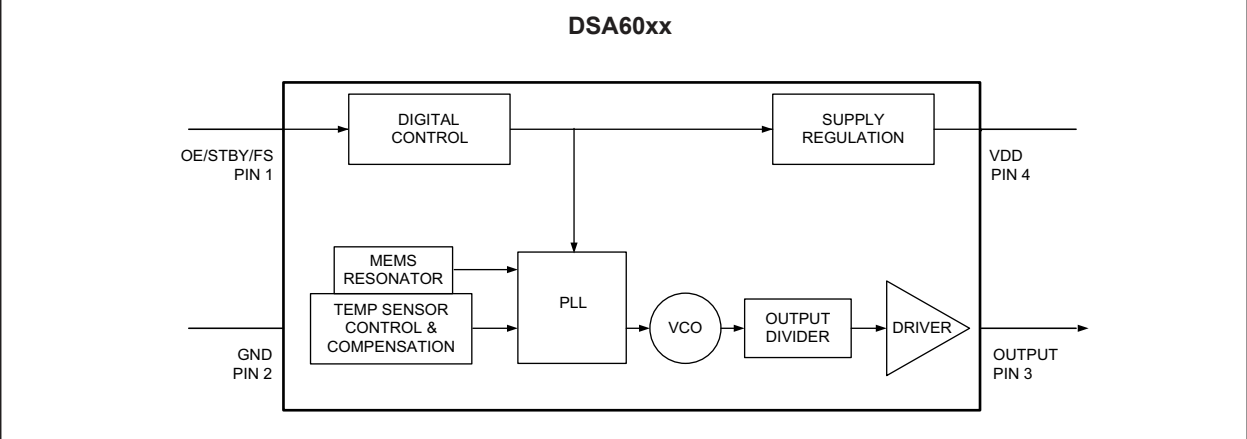

The DSA60xx family is available in ultra-small 1.6 mm x 1.2 mm, 2.0 mm x 1.6 mm and 2.5 mm x 2.0 mm packages. These packages are “drop-in” replacements for standard 4-pin CMOS quartz crystal oscillators.

## TEMPERATURE SPECIFICATIONS (Note 1)

Parameters	Sym.	Min.	Typ.	Max.	Units	Conditions
<b>Temperature Ranges</b>						
Maximum Junction Temperature	$T_J$	—	—	+150	°C	—
Storage Ambient Temperature Range	$T_S$	-55	—	+150	°C	—
Soldering Temperature	—	—	+260	—	°C	40 sec. max.

**Note 1:** The maximum allowable power dissipation is a function of ambient temperature, the maximum allowable junction temperature and the thermal resistance from junction to air (i.e.,  $T_A$ ,  $T_J$ ,  $\theta_{JA}$ ). Exceeding the maximum allowable power dissipation will cause the device operating junction temperature to exceed the maximum +150°C rating. Sustained junction temperatures above +150°C can impact the device reliability.

## 2.0 PIN DESCRIPTIONS

The DSA60xx is a highly configurable device and can be factory programmed in many different ways to meet the customer's needs. Microchip's ClockWorks® Configurator <http://clockworks.microchip.com/Timing/> must be used to choose the necessary options, create the final part number, data sheet, and order samples. The descriptions of the pins are listed in Table 2-1.

**TABLE 2-1: DSA60XX PIN FUNCTION TABLE**

Pin Number	Pin Name	Description
1	OE	Output Enable: H = Active, L = Disabled (High Impedance).
	$\overline{\text{STDBY}}$	Standby: H = Device is active, L = Device is in standby (Low Power Mode).
	FS	Frequency Select: H = Output Frequency 1, L = Output Frequency 2.
2	GND	Ground.
3	OUTPUT	Oscillator clock output
4	VDD	Power Supply: 1.71V to 3.63V.

An explanation of the different options listed in Table 2-1 follows.

### 2.1 Pin 1

This is a control pin and may be configured to fulfill one of six different functions. If not actively driven, a 10 kΩ pull-up resistor is recommended.

#### 2.1.1 OUTPUT ENABLE (OE)

Pin 1 may be configured as OE. Oscillator output may be turned on and off according to the state of this pin.

#### 2.1.2 $\overline{\text{STDBY}}$

Pin 1 may be configured as Standby. When the pin is low, both output buffer and PLL will be off and the device will enter a low power mode.

#### 2.1.3 FREQUENCY SELECT (FS)

Pin 1 may be configured as FS. The output may be set to one of two pre-programmed frequencies. The output clock frequencies can only be set to either kHz or MHz. A combination of kHz and MHz cannot be set.

### 2.2 Pins 2 through 4

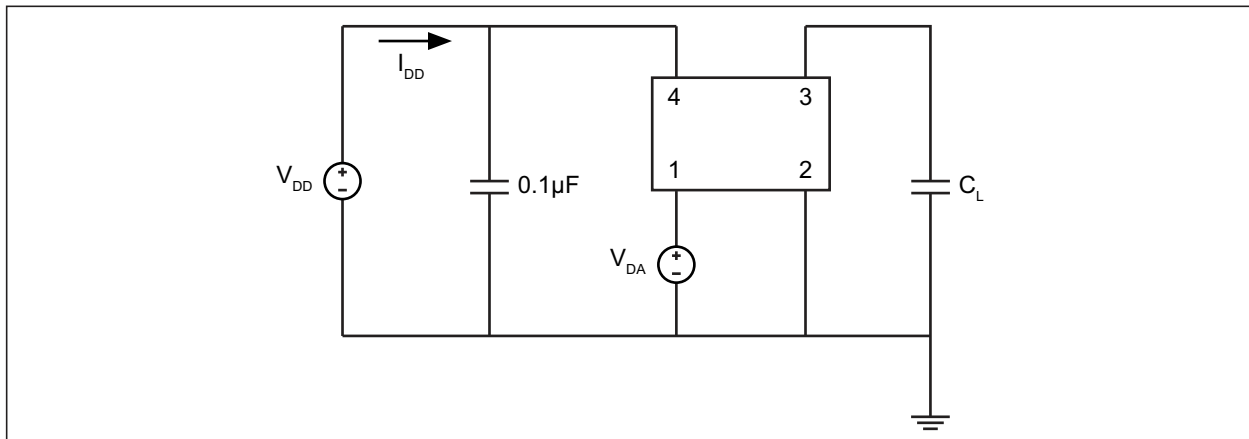

Pins 2 and 4 are the supply terminals, GND and VDD respectively. Pin 3 is the clock output, programmable to Standard and Low Drive strength settings. Visit ClockWorks® Configurator to customize your device.

NOTES:

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
