AN26218A

UMTS triple band LNA-IC

■ Overview

- AN26218A is LNA-IC for 800 MHz / 1.7 GHz / 2.1 GHz Band Applications.
- Realizing high performance by using 0.18 μ m SiGeC Bi-CMOS process(fT = 90 GHz, fmax = 140 GHz).
- Each band is selectable and High/Low Gain-mode is changeable, controlled by integrated CMOS logic circuit.
- Achieving miniaturization by using small size package.

■ Features

- Low voltage operation +2.8 V typ.
- Low current consumption 3.3 mA typ. (High-Gain mode)
11 μ A typ. 2.1 GHz (Low-Gain mode)
25 μ A typ. 800 MHz / 1.7 GHz (Low-Gain mode)
- High gain(Gain) 16.7 dB typ. fRX = 2140 MHz (High-Gain mode)
16.7 dB typ. fRX = 884.5 MHz (High-Gain mode)
16.5 dB typ. fRX = 1862.5 MHz (High-Gain mode)
- Low noise figure(NF) 1.75 dB typ. fRX = 2140 MHz (High-Gain mode)
1.80 dB typ. fRX = 884.5 MHz (High-Gain mode)
1.65 dB typ. fRX = 1862.5 MHz (High-Gain mode)
- Low distortion 0.0 dBm typ. fRX = 2140 MHz (High-Gain mode)
(IIP3 +10 MHz offset) -5.0 dBm typ. fRX = 884.5 MHz (High-Gain mode)
-3.0 dBm typ. fRX = 1862.5 MHz (High-Gain mode)
- Small package(WLCSP)

■ Applications

- UMTS triple-band handset

■ Package

- 11 pin Wafer level chip size package (WLCSP)
Size : 1.16 mm × 1.56 mm (0.4 mm pitch)

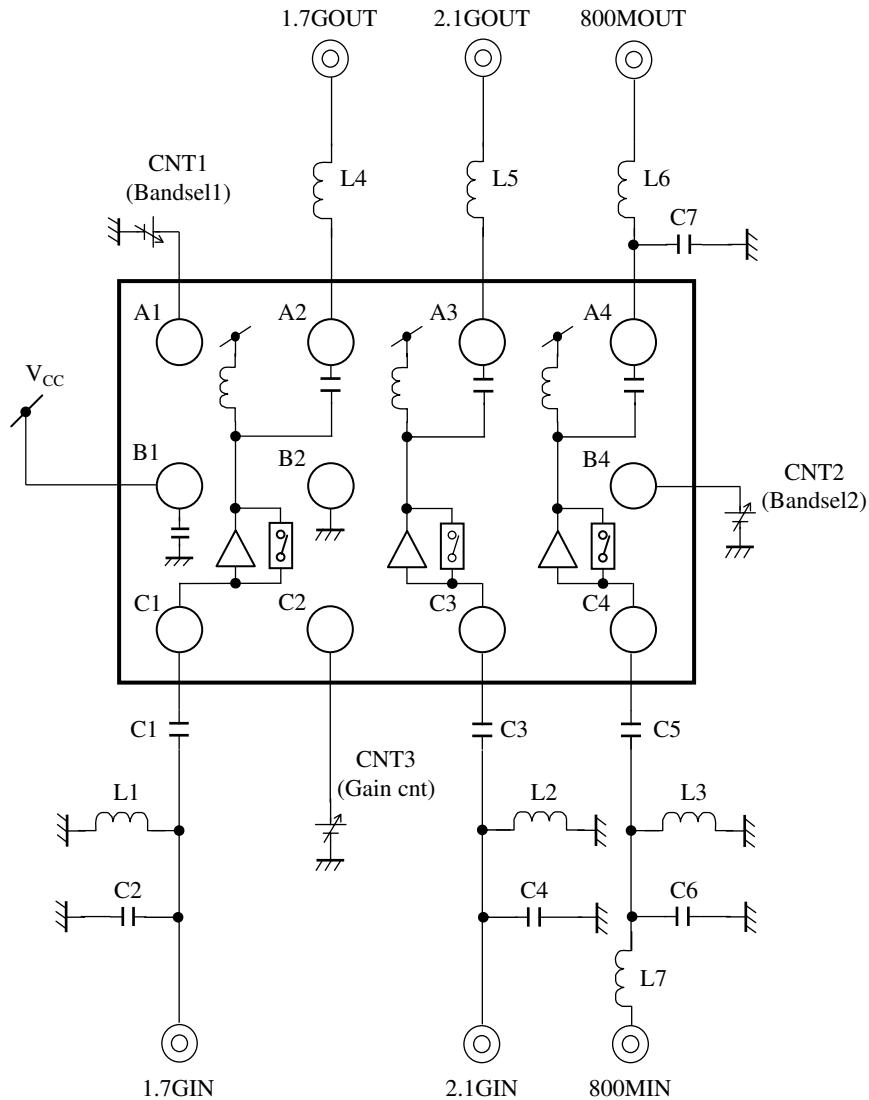

■ Type

- Bi-CMOS IC

2011-07-20		
Established	Revised	

■ Application Circuit Example (Block Diagram)

(Top View)

- Notes)
- This application circuit is an example. The operation of mass production set is not guaranteed. You should perform enough evaluation and verification on the design of mass production set. You are fully responsible for the incorporation of the above application circuit and information in the design of your equipment.
 - This block diagram is for explaining functions. Part of the block diagram may be omitted, or it may be simplified.
 - External components : See page 29.

■ Pin Descriptions

Pin No.	Pin name	Type	Description
A1	CNT1	Input	Band Selective SW1
A2	OUT1	Output	1.7 GHz RF Output
A3	OUT2	Output	2.1 GHz RF Output
A4	OUT3	Output	800 MHz RF Output
B1	V _{CC}	Power Supply	V _{CC}
B2	GND	Ground	GND
B4	CNT2	Input	Band Selective SW2
C1	IN1	Input	1.7 GHz RF Input
C2	CNT3	Input	High-Gain / Low-Gain Selective SW
C3	IN2	Input	2.1 GHz RF Input
C4	IN3	Input	800 MHz RF Input

Absolute Maximum Ratings

Note) Absolute maximum ratings are limit values which do not result in damages to this IC, and IC operation is not guaranteed at these limit values.

A No.	Parameter	Symbol	Rating	Unit	Notes
1	Supply voltage	V _{CC}	3.6	V	*1
2	Supply current	I _{CC}	20	mA	—
3	Power dissipation	P _D	50.8	mW	*2
4	Operating ambient temperature	T _{opr}	-30 to +85	°C	*3
5	Storage temperature	T _{stg}	-55 to +125	°C	*3

Notes) *1 : The values under the condition not exceeding the above absolute maximum ratings and the power dissipation.

*2 : The power dissipation shown is the value at T_a = 85°C for the independent (unmounted) IC package without a heat sink.

When using this IC, refer to the P_D-T_a diagram of the package standard and design the heat radiation with sufficient margin so that the allowable value might not be exceeded based on the conditions of power supply voltage, load, and ambient temperature.

*3 : Except for the power dissipation, operating ambient temperature, and storage temperature, all ratings are for T_a = 25°C.

Operating Supply Voltage Range

Parameter	Symbol	Range	Unit	Notes
Supply voltage range	V _{CC}	2.7 to 2.875	V	*1

Note) *1 :The values under the condition not exceeding the above absolute maximum ratings and the power dissipation.

■ Allowable Current and Voltage Range

- Notes) • Allowable current and voltage ranges are limit ranges which do not result in damages to this IC, and IC operation is not guaranteed within these limit ranges.
- Voltage values, unless otherwise specified, are with respect to GND.
 - Do not apply external currents or voltages to any pin not specifically mentioned.

Pin No.	Pin name	Rating	Unit	Notes
A1	CNT1	–0.3 to ($V_{CC} + 0.3$)	V	*2
A2	OUT1	–0.3 to ($V_{CC} + 0.3$)	V	*2
A3	OUT2	–0.3 to ($V_{CC} + 0.3$)	V	*2
A4	OUT3	–0.3 to ($V_{CC} + 0.3$)	V	*2
B4	CNT2	–0.3 to ($V_{CC} + 0.3$)	V	*2
C1	IN1	—	V	*1
C2	CNT3	–0.3 to ($V_{CC} + 0.3$)	V	*2
C3	IN2	—	V	*1
C4	IN3	—	V	*1

Notes) *1 : Do not apply more than 0 dBm at high gain mode (5 dBm at low gain mode) to RF input.

This is a RF signal input pin. Do not apply DC.

*2 : ($V_{CC} + 0.3$) V must not be exceeded 3.6 V.

■ Usage Notes

• Special attention and precaution in using

1. This IC is intended to be used for general electronic equipment [UMTS Triple – Band handset].

Consult our sales staff in advance for information on the following applications:

- Special applications in which exceptional quality and reliability are required, or if the failure or malfunction of this IC may directly jeopardize life or harm the human body.
- Any applications other than the standard applications intended.
 - (1) Space appliance (such as artificial satellite, and rocket)
 - (2) Traffic control equipment (such as for automobile, airplane, train, and ship)
 - (3) Medical equipment for life support
 - (4) Submarine transponder
 - (5) Control equipment for power plant
 - (6) Disaster prevention and security device
 - (7) Weapon
 - (8) Others : Applications of which reliability equivalent to (1) to (7) is required

It is to be understood that our company shall not be held responsible for any damage incurred as a result of or in connection with your using the IC described in this book for any special application, unless our company agrees to your using the IC in this book for any special application.

2. Pay attention to the direction of LSI. When mounting it in the wrong direction onto the PCB (printed-circuit-board), it might smoke or ignite.
3. Pay attention in the PCB (printed-circuit-board) pattern layout in order to prevent damage due to short circuit between pins. In addition, refer to the Pin Description for the pin configuration.
4. Perform a visual inspection on the PCB before applying power, otherwise damage might happen due to problems such as a solder-bridge between the pins of the semiconductor device. Also, perform a full technical verification on the assembly quality, because the same damage possibly can happen due to conductive substances, such as solder ball, that adhere to the LSI during transportation.
5. Take notice in the use of this product that it might break or occasionally smoke when an abnormal state occurs such as output pin V_{CC} short (Power supply fault), output pin-GND short (Ground fault), or output-to-output-pin short (load short) . And, safety measures such as an installation of fuses are recommended because the extent of the above-mentioned damage and smoke emission will depend on the current capability of the power supply.
6. When designing your equipment, comply with the range of absolute maximum rating and the guaranteed operating conditions (operating power supply voltage and operating environment etc.). Especially, please be careful not to exceed the range of absolute maximum rating on the transient state, such as power-on, power-off and mode-switching. Otherwise, we will not be liable for any defect which may arise later in your equipment.
Even when the products are used within the guaranteed values, take into the consideration of incidence of break down and failure mode, possible to occur to semiconductor products. Measures on the systems such as redundant design, arresting the spread of fire or preventing glitch are recommended in order to prevent physical injury, fire, social damages, for example, by using the products.
7. When using the LSI for new models, verify the safety including the long-term reliability for each product.
8. When the application system is designed by using this LSI, be sure to confirm notes in this book.
Be sure to read the notes to descriptions and the usage notes in the book.
9. Due to unshielded structure of this IC, under exposure of light, function and characteristic of the product cannot be guaranteed.
During normal operation or even under testing condition, please ensure that IC is not exposed to light.
10. Basically, chip surface is ground potential. Please design to ensure no contact between chip surface and metal shielding.
