

SY73551L

160MHz 1:4 LVCMOS/LVTTL
Fanout Buffer

General Description

The SY73551L is a high speed 1:4 LVCMOS/LVTTL fanout buffer. Its LVCMOS/LVTTL logic-compatible input is reproduced four times by LVCMOS/LVTTL outputs with less than 250ps of skew and only 63fs_{RMS} of additive phase jitter.

The non-inverting outputs have low impedance and are capable of driving 50Ω transmission lines. An output enable function provides the ability to tri-state the output signals.

The SY73551L operates from a 3.3V ±10% power supply and is guaranteed over the full industrial temperature range of -40°C to +85°C. It is available in an 8-pin SOIC package. The SY73551L is part of Micrel's Precision Edge[®] product line.

Datasheets and support documentation are available on Micrel's web site at: www.micrel.com.
