

MIPI DigRF 3G and v4 Decode

Key Features

- **DigRF v4 Decodes**
 - Low-speed (26 Mb/s)
 - Medium-speed (1248 Mb/s)
 - High-speed (1456 Mb/s)
- **DigRF v3 Decodes**
 - Low-speed (6.5 Mb/s)
 - Medium-speed (26 Mb/s)
 - High-speed (312 Mb/s)
- **Convert DigRF 3G and v4 I and Q digital data to corresponding analog waveforms**
- **Correlate analog waveforms with protocol decode on one screen**
- **View decoded data in hexadecimal format**
- **Decode information expands as the time base is adjusted or zoomed**
- **Convenient table display with quick “Zoom to byte” capability**
- **Quick search capability for specific message packets**

View an entire DigRF 3G burst using intuitive decoding and table display. Click the table to view a zoom of a particular packet.

The DigRF 3G and v4 decode are the ideal tools for powerful system level protocol debug as well as problem solving for signal quality issues. The DigRF decodes add a unique set of tools to your oscilloscope, simplifying how you design and debug MIPI digital RF systems.

The Most Intuitive Decode

MIPI DigRF decodes use color-coded overlays on various sections of the protocol for an easy-to-understand visual display. Depending on the time base or the amount of zoom, the decode information is condensed or expanded to better assist in understanding events during short or long acquisitions.

The Single Tool Enhances Productivity

The MIPI DigRF 3G decode solutions concentrates all your information in one place. Viewing the application layer of DigRF 3G and v4 signals on top of the physical layer provides a unique view that bus analyzers cannot. Measurements such as IVRms, QVRms, PIQ, IDC, and QDC can be applied to the DigRF v4 signals for greater understanding.

Complete Compliance and Debug

For a complete MIPI toolset, LeCroy offers a D-PHY compliance and decode package. QPHY-MIPI-DPHY provides automated compliance testing to the MIPI Alliance specification for D-PHY version 1.00.00. The D-PHY decode solution provides a simple and powerful debug solution for D-PHY, CSI-2 and DSI signals.

MULTI-DOMAIN ANALYSIS, POWERFUL SEARCH TOOLS

1. Convert Digital RF Signal to RF View

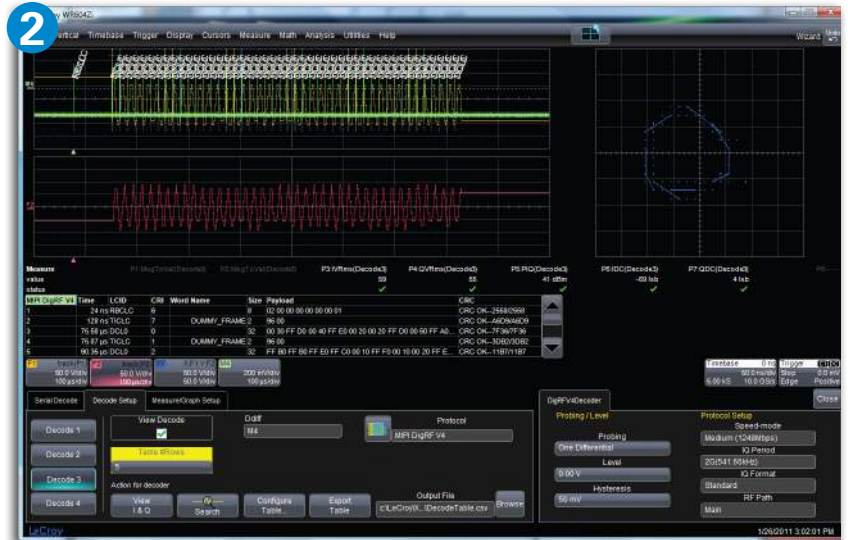

With the addition of the PROTObus MAG Serial Debug Toolkit, DigRF 3G and v4 I and Q digital data payload fields may be quickly converted into a corresponding I and Q analog waveform representation for easy analysis and debug. View the I, Q or both waveforms in the time domain, and perform time / delay measurements on I and Q signals.

Convert the digital I and Q DigRF 3G signals into corresponding analog waveforms for easy analysis.

2. Constellation Diagram

View the constellation diagram of the DigRF v4 signal for a visual representation of interference or distortion in the acquired signal.

DigRF v4 Constellation diagram shows information such as gaussian noise, Phase noise, and attenuation.

3. Convenient Table Display Summarizes Results

Turn your oscilloscope into a protocol analyzer with the table display of protocol information. Custom configure the table to display the information you want, and export table data into an Excel file. Touch the message in the table and automatically zoom for detail. In all cases, the table never obscures your waveform.

Display your values in an easy to understand table. Touch a row to zoom or export to Excel with one button push.

4. Search and Zoom

Search through a long record of decoded data by entering any of the available search criteria by entering a value or simply finding the next occurrence.

Customer Service

LeCroy oscilloscopes and probes are designed, built, and tested to ensure high reliability. In the unlikely event you experience difficulties, our digital oscilloscopes are fully warranted for three years and our probes are warranted for one year.

This warranty includes:

- No charge for return shipping
- Long-term 7-year support
- Upgrade to latest software at no charge
