# **Safety Precautions**

#### 

This may occasionally cause electric shock, fire, or malfunction. Never disassemble, repair, or modify the H2C.

This may occasionally cause electric shock, fire, or malfunction. Do not allow metal fragments or lead wire scraps to fall inside the H2C.

# Precautions for Safe Use

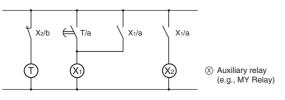

Observe the following items to ensure the safe use of this product.

### **Environmental Precautions**

- Store the H2C within the specified ratings. If the H2C has been stored at temperatures -10°C or lower, let it stand for 3 hours or longer at room temperature before turning ON the power supply.
- Use the H2C within the specified ratings for operating temperature and humidity.
- Do not operate the H2C in locations subject to sudden or extreme changes in temperature, or locations where high humidity may result in condensation.
- Do not use the H2C in locations subject to vibrations or shock. Extended use in such locations may result in damage due to stress.
- Do not use the H2C in locations subject to excessive dust, corrosive gas, or direct sunlight.
- Install the H2C well away from any sources of static electricity, such as pipes transporting molding materials, powders, or liquids.
- The H2C is not waterproof or oil resistant. Do not use it in locations subject to water or oil.
- The life expectancy of internal components may be reduced if the H2C is mounted side-by-side.
- Do not use organic solvents (such as paint thinner or benzine), strong alkaline, or strong acids because they will damage the external finish.

## Usage Precautions

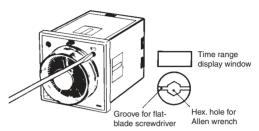

- Install a switch or circuit breaker that allows the operator to immediately turn OFF the power, and label it to clearly indicate its function.
- Be sure to wire the terminals correctly.
- Do not install input lines in the same duct or conduit as power supply or other high-voltage lines. Doing so may result in malfunction due to noise. Separate the input lines from highvoltage lines.
- Internal elements may be destroyed if a voltage outside the rated voltage is applied.
- Maintain voltage fluctuations in the power supply within the specified range.
- Use a switch, relay, or other contact so that the rated power supply voltage will be reached within 0.1 s. If the power supply voltage is not reached quickly enough, the H2C may malfunction or outputs may be unstable.
- Leaving the H2C with outputs ON at a high temperature for a long time may hasten the degradation of internal parts (such as electrolytic capacitors). Therefore, use the H2C in combination with relays and avoid leaving the H2C for more than 1 month with an output turned ON.

# Precautions for Correct Use

### How to Change the Time Range

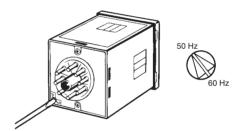

Change the time range by turning the knob clockwise using a flatblade screwdriver or an Allen wrench. There are five possible settings. The selected time is displayed in the time range display window above the knob.

Do not change the time range while the timer is in operation.

### How to Select Power Frequency

Before using the timer, set the frequency selector located at the rear panel to the proper power frequency (50 to 60 Hz).

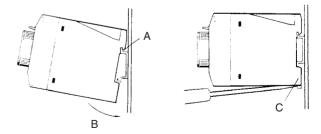

#### How to Mount the Timer on Mounting Track

#### Mounting

First hook portion A of the timer to the mounting track, then press the timer in direction B.

#### Dismounting

Pull out portion C with a round-blade screwdriver and remove the timer from the mounting track.

### **Electrical Set**

The motor and clutch do not need to be reset simultaneously.

Use the voltage applied to the clutch for resetting with the H2C- $\Box$ R. Do not allow power to be continuously applied to the motor and clutch for extended periods of time.

### **Others**

Do not turn the operation time setting knob beyond the range of the scale. To achieve higher accuracy in setting, measure the operation time while turning the operation time setting knob.

The deviation and setting error for the operation time shows the percent of FS. The absolute value of the deviation and setting error will not change even if the set time is changed. The time specifications should therefore be selected to use the operation time as close to FS as possible.

At high temperatures, the operation voltage will be 90% or less if voltage is applied continuously after timeout. Be sure to keep the voltage within the allowable voltage fluctuation range.

### Precautions for EN61812-1

The H2C (except for H2C-F $\Box$ ) as a built-in timer conforms to EN61812-1, provided that the following conditions are satisfied.

#### Handling

Before dismounting the H2C from the Socket, make sure that no voltage is imposed on any terminal of the H2C.

Applicable Sockets: P2CF-OO, P2CF-OO-E, PF085A, PLOO.

#### Wiring

Basic insulation is ensured between the motor circuit, clutch circuit, and control output circuit. (However, the H2C-8 motor circuit and clutch circuit use the same input.) Basic insulation is also ensured between the output circuits of models with instantaneous output.

Basic insulation: Overvoltage category III, pollution degree 1 (See note.)

Operating parts: Reinforced insulation (double insulation) (with a clearance of 5.5 mm and a creepage distance of 5.5 mm at 240 VAC)

Output parts: Basic insulation

(with a clearance of 3.0 mm and a creepage distance of 3.0 mm at 240 VAC)

Note: Overvoltage category II, pollution degree 1 if the Timer is mounted to the PL11 Socket.
