CARRY LOOKAHEAD GENERATOR

DESCRIPTION — The '42 is a high speed lookahead carry generator. It is generally used with the 9341 (54/74181) 4-bit arithmetic logic unit to provide high speed lookahead over word lengths of more than four bits. The lookahead carry generator is fully compatible with all members of the TTL family.

- PROVIDES LOOKAHEAD CARRIES ACROSS A GROUP OF FOUR ALU'S
- MULTI-LEVEL LOOKAHEAD FOR HIGH SPEED ARITHMETIC OPERATION OVER LONG WORD LENGTHS

ORDERING CODE: See Section 9

FUNCTIONAL DESCRIPTION — The '42 lookahead carry generator accepts up to four pairs of active LOW Carry Propagate ($\overline{P}_0 - \overline{P}_3$) and Carry Generate ($\overline{G}_0 - \overline{G}_3$) signals and an active HIGH Carry input (C_n) and provides anticipated active HIGH carries ($C_{n+x}, C_{n+y}, C_{n+z}$) across four groups of binary adders. The '42 also has active LOW Carry Propagate (\overline{P}) and Carry Generate (\overline{G}) outputs which may be used for further levels of lookahead. The logic equations provided at the outputs are:

$$C_{n+x} = G_0 + P_0 C_n$$

$$C_{n+y} = G_1 + P_1 G_0 + P_1 P_0 C_n$$

$$C_{n+z} = G_2 + P_2 G_1 + P_2 P_1 G_0 + P_2 P_1 P_0 C_n$$

$$\overline{G} = \overline{G_3 + P_3 G_2 + P_3 P_2 G_1 + P_3 P_2 P_1 G_0}$$

$$\overline{P} = \overline{P_3 P_2 P_1 P_0}$$

Also, the '42 can be used with binary ALU's in an active LOW or active HIGH input operand mode. The connections (Figure a) to and from the ALU to the lookahead carry generator are identical in both cases. Carries are rippled between lookahead blocks. The critical speed path follows the circled numbers. There are several possible arrangements for the carry interconnects, but all achieve about the same speed. A 28-bit ALU is formed by dropping the last 93S41.
