

Features

- Built-in voice filter for cordless telephone, MSK MODEM (1200/2400bps), COMPANDOR, and scrambler circuit
- Low / wide operation voltage range (1.9 V to 5.5V)
- Built-in COMPANDOR output transient response circuit and time constant circuit
- No external component is needed for COMPANDOR
- Built-in buffer amplifier for ceramic receiver driving.
- Built-in electronic volume for microphone sensitivity and modulator/demodulator sensitivity
- Receiving level switchable in 8 steps (-12 to +9dB)
- Built-in muting function for voice transmitting and receiving
- External adjustment for the limiter level
- Built-in amplifier for transmission and reception gain adjustment
- Low power CMOS and power-down function
- Built-in 3.6864MHz oscillator circuit
- Scrambler circuit with frequency inversion. Two inversion frequencies can be selected.
- Bypassing the scrambler circuit available
- Built-in frame detection function for the MSK demodulator
- Control register and MSK MODEM data buffer controlled by serial interface
- Few external component is necessary resulting cost reduction and small set size.
- Package: 24 pin VSOP

Block Diagram

|--------------------|
| Description |
|--------------------|

The AK2368, a base-band LSI for cordless telephone, has built-in voice filters, a 2400bps MSK MODEM for data communication, a frame detection circuit, a COMPANDOR for noise reduction, and scrambler circuits.

The CMOS process provides low power operation. Application of 24 pin VSOP package with the feature of significant reduction of external component provides minimum mounting area. The time constant circuit for the COMPANDOR output transient response is built into the LSI.

The data transmission rate of MSK modem can be chosen from 2400bps or 1200bps. 2400bps data rate provides a high speed data transmission so that it is suitable for cordless telephone system which requires a rather complicated protocol control. On the other side, 1200bps data rate provides a higher bit error rate resulting high data reliability. Then it is suitable for low power radio system such as walkie-talkie because it is often used under weak electrical field condition.

An oscillation circuit with a 3.6864MHz crystal oscillator is built in, and no other frequency source is required for the MSK MODEM. The oscillator also can be used for the other DTMF generator etc.

The scrambler circuit uses the simple inversion method with inversion of the voice spectrum around the carrier frequency. Two inversion frequencies can be selected.

Built-in electronic volumes provided for transmission and reception part realize automatic adjustment of the microphone sensitivity and the modulator/demodulator sensitivity by external EEPROM and microprocessor.

The transmission part is composed of high-pass filter, compressor, pre-emphasis circuit, scrambler, limiter, MSK modulator, splatter filter, electronic volume control, etc.

The reception part is composed of band pass filter, de-emphasis circuit, de-scrambler, expander, buffer amplifier, MSK demodulator, frame detection circuit, electronic volume control, etc.

■ Pin Arrangement

24 pin VSOP

| |
|------------------------------|
| Circuit Configuration |
|------------------------------|

| Block | Function |
|-------------------|---|
| AMP1 | The operational amplifier for voice signal transmission gain adjustment and for the filter to eliminate aliasing noise by the SCF(switced capacitor filter) in the following stage. Use an external resistor and capacitor to set the gain less than 30dB and the cut-off frequency to about 10kHz. |
| TXHPF | The SCF circuit to eliminate the low frequency component less than 300Hz from the transmission voice signal. |
| Compressor | The circuit to compress the amplitude of the transmission voice signal. |
| Pre-emphasis | The circuit to emphasis the high-frequency component of the transmission voice signal to improve the S/N of the modulation signal. |
| Scrambler (Tx) | The circuit to inverse the transmission voice spectrum in regard to the carrier frequency. Carrier frequency can be selected from two frequencies by KEY. PCONT select to use the scrambler or the pre-emphasis circuit. |
| Limiter | The amplitude-limiting circuit to suppress the frequency deviation of the modulation signal. The limitation level can be adjusted by applying a DC voltage to the LIMLV pin. If the LIMLV pin is open, the default limitation level is applied. |
| Splatter filter | The SCF circuit to eliminate the high frequency component higher than 3kHz from the limiter output signal or the MSK modulator signal. |
| MSK modulator | The circuit to generate a MSK signal according to the received digital signal logic from the TDATA pin. |
| AMP2 | The operational amplifier to adjust the reception demodulation signal gain and for the filter to eliminate the aliasing noise of the SCF in the following stage. Set the gain to less than 30dB and the cut-off frequency to about 10kHz by external resistor and capacitor. |
| RXLPF | The SCF circuit to eliminate the high frequency component higher than 3kHz from the limiter output signal or the MSK modulator signal. |
| RXHPF | The SCF circuit to eliminate the low frequency component lower than 300Hz from the reception voice signal. |
| De-emphasis | The circuit to de-emphasis the emphasized signal by pre-emphasis circuit. |
| De-scrambler (Rx) | The circuit to re-inverse the spectrum of the scrambled receiving voice signal respect to the carrier frequency. Carrier frequency can be selected from two candidates by a KEY. The de-scrambler(Rx) or the de-emphasis circuit can be selected by PCONT. |
| Expander | The circuit to expand the signal amplitude compressed by the compressor. |

| Block | Function |
|----------------------------------|---|
| AMP3 | The operational amplifier used on the smoothing filter of the reception SCF output. Set the gain to 0dB and the cut-off frequency to about 20kHz by external resistor and capacitor. |
| MSKHPF | The SCF circuit to eliminate the low frequency component lower than 100Hz from the reception MSK signal. |
| MSK demodulator | The circuit to reproduce the 2400bps receiving data and the clock from the received MSK signal in the RXIN pin. |
| AMP4 AMP5 | The inverting and the non-inverting buffer amplifier to drive the ceramic receiver. |
| AGND | The circuit to generate the reference voltage for the internal analog signal. |
| Oscillation circuit | The circuit to oscillate the 3.6864 MHz reference clock using an external crystal oscillator and resistor. |
| VR1 | The volume to control the input amplitude of the transmission voice signal. The adjustment range is -8dB to +7dB by 1dB step. |
| VR2 | The volume to control the MOD output amplitude. The adjustment range is -4dB to +3.5dB by 0.5dB step. |
| VR3 | The volume to control the input amplitude of the reception demodulation signal. The adjustment range is -4dB to +3.5dB by 0.5dB step. |
| VR4 | The volume to control the receiving voice amplitude. The adjustment range is -12.8dB to +9.6dB by 3.2dB step. |
| Control register and data buffer | The control register controls the status of internal switches and internal volumes of the LSI by serial data consists of 2 address bits and 8 data bits. At the start up a power-on-reset circuit works and the default values are set to the control register. (see control register map.) The data buffer stores 8 bits of the MSK receiving data to smooth the signal interface with CPU. |

P i n / F u n c t i o n

| Pin No. | Pin name | I / O | Function |
|---------|----------|-------|--|
| 1 | AGNDIN | I | Analog ground input pin. Connect the capacitor to stabilize the analog ground. |
| 2 | TAGND | O | Analog ground pin for the transmission system. Connect the capacitor to stabilize the analog ground. |
| 3 | TXIN | I | Transmission voice input pin. This is the inverting input pin for AMP1. It composes a microphone amplifier with a external resistor and a capacitor. |
| 4 | TXINO | O | AMP1 output pin. |
| 5 | LIMLV | I | Limitation level adjustment pin. The limitation level can be adjusted by applying a DC voltage to this pin. The default limitation level is adopted if no voltage is applied. |

| Pin No. | Pin name | I / O | Function |
|---------|----------|-------|--|
| 6 | MOD | O | Output pin of the modulated transmission signal. A load impedance larger than 10k Ω can be driven. |
| 7 | VSS | - | Negative power supply pin. |
| 8 | TCLK | O | Clock output pin for the MSK data transmission. A 1.2/2.4kHz clock is put out by setting the internal register TDE to "0". If the register is set to "1", it goes "H" level. |
| 9 | TDATA | I | MSK transmission data input pin. Data are latched synchronizing with the TCLK rising edge. |
| 10 | DI/O | I / O | Serial data input and output pin. |
| 11 | RFD/FD | O | MSK signal reception flag output and Frame detection signal output pin. This pin puts out two types of information, depending on the status of the internal register FSL. If FSL is "1", it is MSK signal reception mode, so the pin reaches low after 8 bits of the MSK reception signal have been written to the data register. If FSL is "0", it is the frame detection signal output mode, so the low pulse is put out after a frame pattern is detected. |
| 12 | SCLK | I | Clock input pin for serial data I/O. |
| 13 | DIR | I | Serial data I/O control pin. |
| 14 | XOUT | I | Crystal oscillator connection pin. The reference clock IC is generated by connecting a 3.6864MHz crystal oscillator parallel to a 1M Ω resistor between this pin and XIN pin. In case of external clock operation, connect XOUT pin to VSS and apply the clock to XIN. |
| 15 | XIN | O | Crystal oscillator connection pin. |
| 16 | VDD | - | Positive power supply pin. |
| 17 | EXPOUT | O | Expander output pin. |
| 18 | RXAFIN | I | Reception voice input pin. This is the inverting input of AMP3. It composes a smoothing filter by external resistor and capacitor. |
| 19 | RXAF | O | Reception voice output pin. This is the output pin of AMP3. A load impedance more than 10k Ω can be driven. |
| 20 | BUFON | O | Receiver amplifier output pins. |
| 21 | BUFOP | O | Connect the ceramic receiver between these two pins. |
| 22 | RXINO | O | AMP2 output pin. |
| 23 | RXIN | I | Demodulated receiving signal input pin. This is the inverting input of AMP2. It composes a prefilter with external resistor and capacitor. |
| 24 | RAGND | O | Analog ground pin for the reception system. Connect the capacitor to stabilize analog ground. |

MSK modulator

Serial data input

Note) The timing to rewrite the internal registers TXAFSW and TDE is synchronized with the falling edge of DIR.

MSK demodulator

- Note 1) Internal node
- Note 2) Internal register
- Note 3) If the internal register FSL is "0", the status of "FD" is put out to the RFD/FD pin.
If the FCL is "1", the status of "RFD" is put out.

Control Register Map

■ Register composition

| | Address | | | Data | | | | | | | | |
|---|---------|----|----|--------------------------|-----|------|------|-------|------|-------------|-------------|--|
| | A2 | A1 | A0 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | |
| Control register 1 | 0 | 0 | 0 | FSL | BS2 | BS1 | FCLN | PCONT | TDE | TXAF -SW | RXAF -SW | |
| Volume register | 0 | 0 | 1 | 1 | 1 | 1 | 1 | RECSW | VR 4 | | | |
| Volume register | 0 | 1 | 0 | VR 2 | | | | VR 1 | | | | |
| Control register 2 + volume register | 0 | 1 | 1 | TC | EM | FRPT | KEY | VR 3 | | | | |
| Flame pattern register L | 1 | 0 | 0 | Flame pattern LSH | | | | | | | | |
| Flame pattern register H | 1 | 0 | 1 | Flame pattern MSH | | | | | | | | |
| Reception data register | | | | MSK MODEM reception data | | | | | | | | |

The reception data register is a read only register, and the others are write only registers.

The reception data register has no address information proceeding to the Data.

Set the all bits D4 to D7 of volume register address "001" to "1". If they are set to "0", it changed to test mode.

■ Register map

1) Control register 1

| Address | | | Data | | | | | | | | |

| 1 | 0 | 0 | 0 |
| 1 | 0 | 1 | +3.2 |
| 1 | 1 | 0 | +6.4 |
| 1 | 1 | 1 | +9.6 |

Note) By reset, the gain of all volumes are set to 0dB and RECSW bit is changed to "0".

4) Frame pattern register

| Address | | | Data | | | | | | | |
|-----------|----|----|------|-----|-----|-----|-----|-----|----|----|
| A2 | A1 | A0 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 |
| 1 | 0 | 0 | F7 | F6 | F5 | F4 | F3 | F2 | F1 | F0 |
| (Default) | | | 1 | 1 | 0 | 1 | 0 | 1 | 1 | 0 |
| 1 | 0 | 1 | F15 | F14 | F13 | F12 | F11 | F10 | F9 | F8 |
| (Default) | | | 1 | 1 | 0 | 0 | 0 | 1 | 0 | 0 |

The example of frame pattern setting

| Type of device | F15 | F14 | F13 | F12 | F11 | F10 | F9 | F8 | F7 | F6 | F5 | F4 | F3 | F2 | F1 | F0 |
|---|-----|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|----|
| Cordless telephone Call sign length 25 bit Base set | 1 | 1 | 0 | 0 | 0 | 1 | 0 | 0 | 1 | 1 | 0 | 1 | 0 | 1 | 1 | 0 |
| 28 bit Hand set | | | | | | | | | | | | | | | | |
| Cordless telephone Call sign length 25 bit Base set | 1 | 0 | 0 | 1 | 0 | 0 | 1 | 1 | 0 | 0 | 1 | 1 | 0 | 1 | 1 | 0 |
| 28 bit Hand set | | | | | | | | | | | | | | | | |
| Low power radio etc. | 0 | 0 | 0 | 1 | 1 | 0 | 1 | 1 | 1 | 0 | 1 | 0 | 1 | 0 | 0 | 0 |
| MPT1317/1327 SYNC | 1 | 1 | 0 | 0 | 0 | 1 | 0 | 0 | 1 | 1 | 0 | 1 | 0 | 1 | 1 | 1 |
| MPT1317/1327 SYNT | 0 | 0 | 1 | 1 | 1 | 0 | 1 | 1 | 0 | 0 | 1 | 0 | 1 | 0 | 0 | 0 |

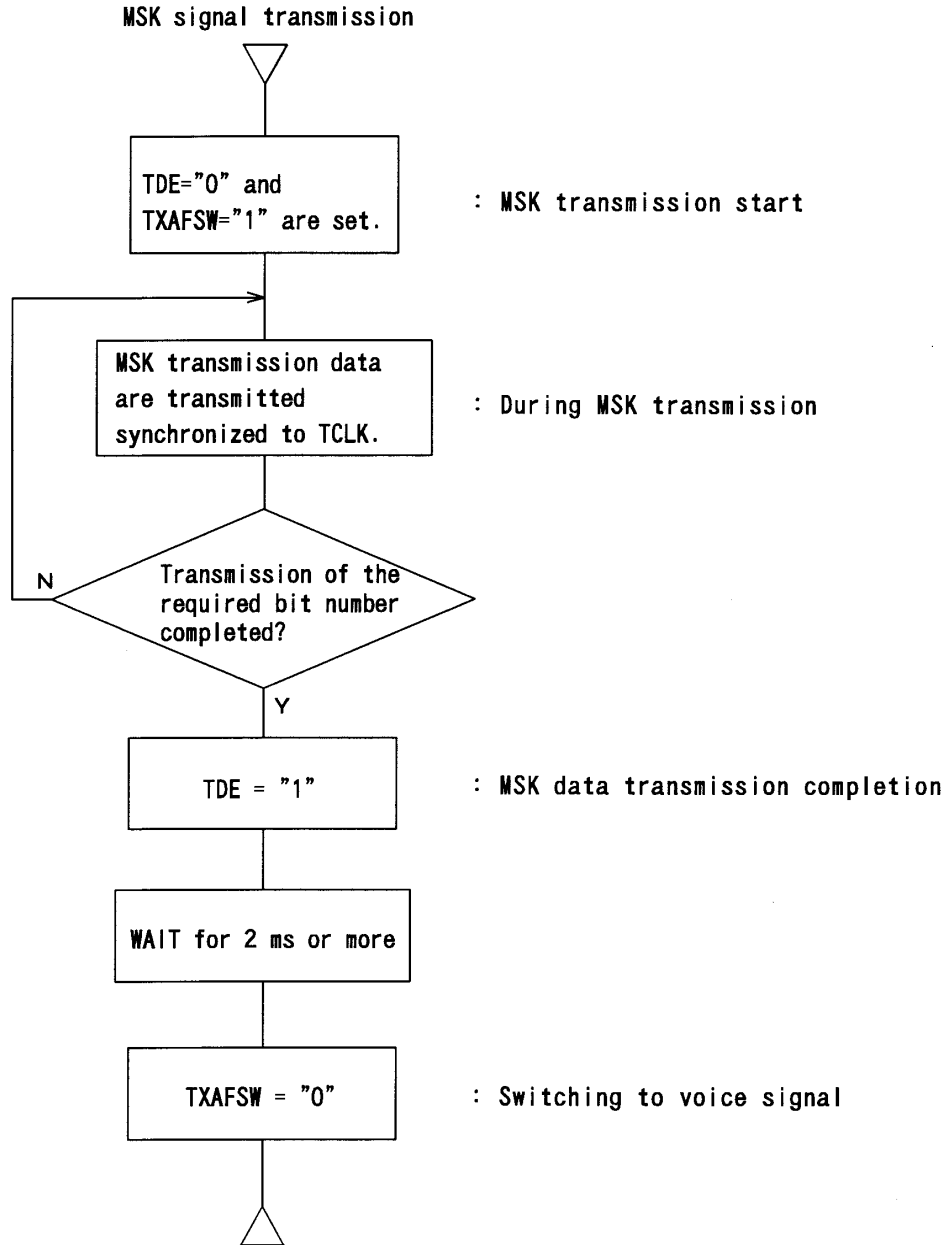

5) MSK MODEM reception data

| Data | | | | | | | |
|------|-----|-----|-----|-----|-----|-----|-----|
| D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 |
| RD7 | RD6 | RD5 | RD4 | RD3 | RD2 | RD1 | RD0 |

| Data name | Function |
|-----------|------------------------------------|
| RD0 | MSK reception data |
| ? | MSKSL="0" "1":1.2kHz "0":2.4kHz |
| RD7 | MSKSL="1" "1":1.2kHz "0":1.8kHz |
| | RD7 is the first received data. |

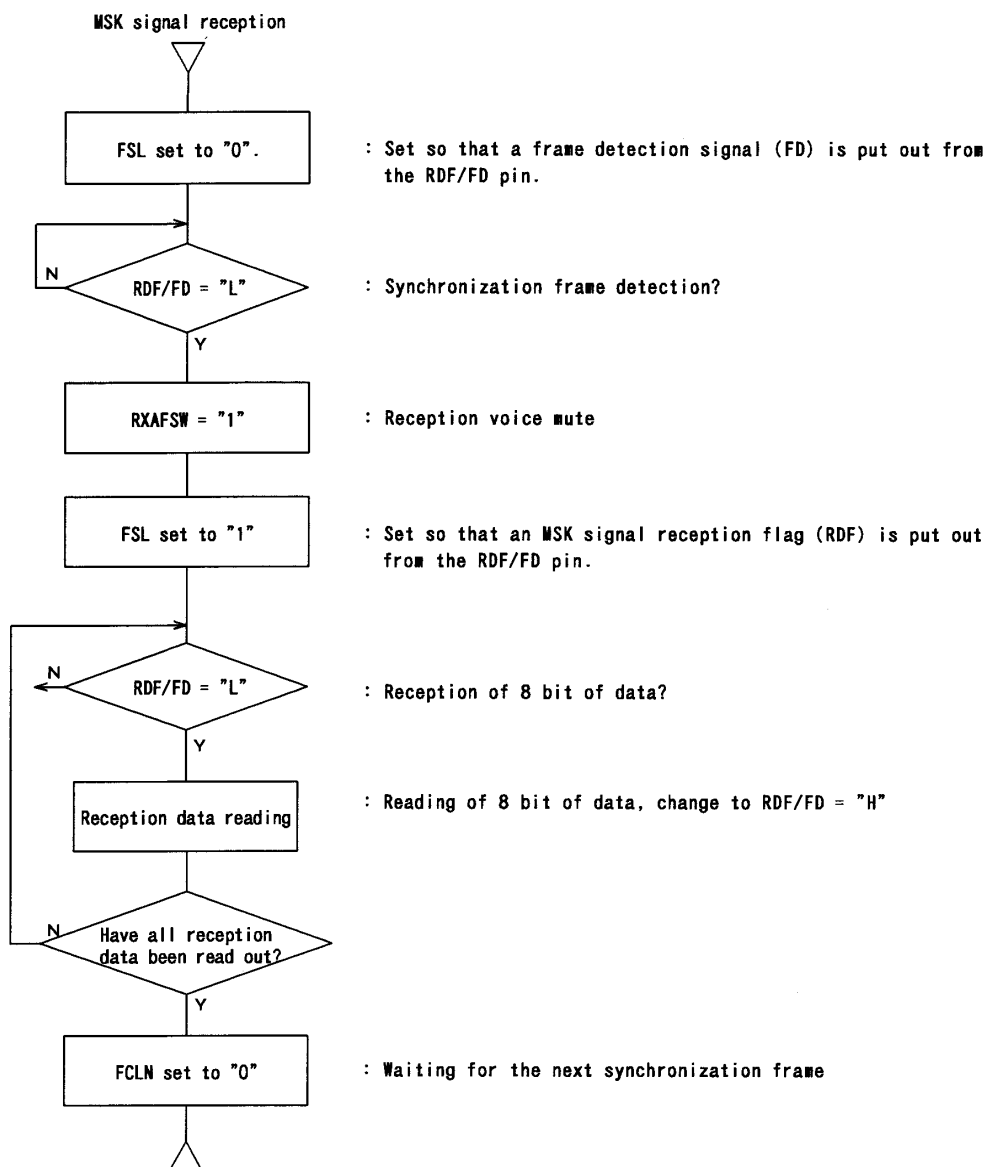

MSK Modem

MSK signal transmission flow

- (1) Set the serial register "TDE" to "0" and "TXAFSW" to "1", so that MSK transmission state is provided.
- (2) A 1200/2400Hz clock is put out from TCLK. Synchronizing with the rising edge of TCLK, AK2368 reads the MSK transmission data from TDATA pin and put out them to MOD pin.
- (3) After the transmission of the necessary number of signal bit, "TDE" of the serial register is set to "1".
- (4) Afterwards, before switching to a voice signal transmission mode, wait at least 2ms after "TDE" has set to "1" to complete the MSK signal final bit transmission. Then set TXAFSW register to "0".

MSK Signal Reception

- (1) If the internal register "FCLN" is "0", the internal nodes RDATA, RCLK are fixed to "1".
- (2) After a synchronization frame is detected, FD goes to "L" during the period "T", then FCLN is set to "1".
- (3) RDATA and RCLK which are internal nodes put out the data following to the synchronized frame pattern, and these are stored in the internal buffer.
- (4) CPU should write "1" to serial register RXAFSW and FSL to mute the received voice signal and put out MSK signal reception flag from RDF/FD pin. Also "1" should be written to FCLN.
- (5) After 8 bit of reception data have been entered to the internal buffer, RDF goes "L".
- (6) After the CPU detect that RDF/FD is "L", it puts out 8 clock bits to SCLK, then read 8 bit of reception data from the DI/O pin. With input of 8 clock bits to SCLK, RDF goes "H".
- (7) Afterwards, by repeating the steps (4) and (5) the necessary data bits are read.
- (8) After the necessary data have been read, DIR goes "H", "FCLN" is set to "0" via the serial interface, the internal nodes RDATA and RCLK are set to "1", then the system waits for the next synchronization frame.

Application Circuit Example

■ Application Circuit

◎ AMP 1

Use as a transmitting microphone amplifier. The gain should be less than 30dB. To eliminate high frequency noise component over than 100kHz from input signal, 1st order or 2nd order anti-aliasing filter is necessary. The following drawing is one example of the 2nd order anti-aliasing filter, which has 30dB gain and 10kHz cut-off frequency.

◎ Smoothing filter for MOD output signal

Realize low-pass filter to eliminate 115kHz clock signal component from MOD pin output signal. The following is one example of the 1st order low-pass filter which has 8.7kHz cut-off frequency. 10kΩ of the modulator load resistor(RL) provide 3.3dB signal attenuation.

◎ AMP 2

The amplifier for the receiving gain adjustment and anti-aliasing filtering to eliminate high frequency noise component over 100kHz. The gain should be less than 30dB. The following is an example of the 2nd order low pass filter, which has 20 dB gain and 40kHz cut-off frequency.

◎ AMP 3

The smoothing filter to eliminate 448kHz clock component from EXPOUT signal is provided by this amplifier. Also it works to adjust the receiving gain. Adding the other pass signal may be possible. The following is one example of the 1st order low-pass filter, which has 0dB gain, 19kHz cut-off frequency.

◎ AGND stabilizing capacitor

To stabilize the AGND potential, connect capacitors larger than $0.3 \text{ } \mu\text{F}$ between TAGND pin, RAGND pin and AVSS pin. Also between AGNDIN pin and AVSS pin some capacitor is necessary to reduce the ripple of the power.

◎ VDD stabilizing capacitor

To reduce the noise on VDD, connect capacitors between VDD and VSS.

◎Crystal oscillator

- Crystal resonator, resistor and capacitors should be connected as shown Fig.3 for on-chip oscillator operation.
- For external clock operation, if the high(H) level of the input clock signal amplitude equals to or is greater than 1.5V, and the low(L) level equals to or is smaller than 0.5V, then connection should be made as shown in Fig.4. If the input clock signal amplitude (peak-to-peak) equals to or is smaller than 1V, and equals to or is greater than 200mV, then AC coupling should be as illustrated in Fig.5.

Fig. 3

Fig. 4

fig. 5

◎Limit level adjusting resistor

The limiting level can be controlled externally by applying DC voltage to LIMIV pin. Applied DC voltage should be larger than TAGND, then the limiting level is shown as TAGND±Va(V), while Va is the voltage between LIMIV and TAGND. Keeping LIMIV pin open provides default limit level. See following example.

P a c k a g e

■ Marking

[Contents of XXXYZ]

XXX: Date of manufacture

Last digit of the year, week number of the year as 2 digits

Y: Production lot number

Z: Assembled place

■ Shape and dimensions of the package

24 pin VSOP

Note: Dimensions marked by * do not include residual resin.

Detail of part A

[Material] Resin: Low-stress type epoxy resin
Lead frame: Cu

Products described in this data sheet and product specifications are subject to change without notice due to product improvements. Please note that this company shall not be liable for the consequences of use under conditions other than those specified in this data sheet.
