

MMZ2012 Series Ferrite Bead Kit

Consumer Grade Ferrite Chip Bead Kit

The TDK MMZ2012 Series ferrite chip beads are used to suppress noise in signal line circuits. They are effective at reducing noise simply by being placed into the circuit in series. Multilayer chip beads consist of ferrite material and a conductive paste layered together. static characteristics of a chip bead are typically described as the impedance value Z at a frequency of 100MHz. While several different chip beads could have the same impedance value at 100MHz, it is important to look at their individual frequency characteristics to determine which bead will work best for the circuit within the required frequency range. TDK offers several material types which provide various frequency characteristics for the MMZ series chip beads.

Features

- Noise reduction solution for general signal line
- Various frequency characteristics with different materials
- Countermeasures from general signals to high-speed signals
- Conforms to RoHS directive, halogen free, & compatible with lead-free soldering
- Standard operating temperature range of -55°C to $+125^{\circ}\text{C}$
- Storage temperature range of -55°C to $+125^{\circ}\text{C}$ (after PC board mounting)

Applications

- Household Appliances
- Smart Meters
- STBs
- Industrial Equipment
- Recorders
- Mobile Devices, such as Smartphones and Tablet PCs

MMZ2012 Series Ferrite Chip Bead Kit Includes:

Case Size: 2012

Impedance Range: 15-2000 Ω ($\pm 25\%$)

Current Rating: 1500-400mA

Kit contains 520 pieces total—20 pieces per value

Now Available at:
