Description

STA3005 is a high-performance, fully programmable advanced radio receiver, designed to target AM/FM/HD radio, speech and audio applications.

It is a dual-IF radio processor, with dynamically variable channel filtering; it also features both digital diversity (for dual-tuner systems) and digital directional antenna (single-tuner multiple antennas) for outstanding reception capability.

STA3005 is more than a radio-receiver; it features advanced audio processing, running on an EMERALD DSP for maximum flexibility and efficiency; sample rate converters, high-performance audio ADCs, DACs and multiple industry-standard digital I/O-interfaces make STA3005 the right answer to high-performance audio-processing platforms.

Robust and customizable applications can be easily achieved thanks to the integrated ARM7 microcontroller, which allows controlling and monitoring all the internal peripherals.

Package informations

In order to meet environmental requirements, ST offers this device in ECOPACK[®] packages. These packages have a Lead-free second level interconnect. The category of second level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark.

ECOPACK specifications are available at: www.st.com.
