Regulating Pulse Width Modulators

FEATURES

- 8 to 35V Operation
- 5.1V Buried Zener Reference Trimmed to ±0.75%
- 100Hz to 500kHz Oscillator Range
- Separate Oscillator Sync Terminal
- Adjustable Deadtime Control
- Internal Soft-Start
- Pulse-by-Pulse Shutdown
- Input Undervoltage Lockout with Hysteresis
- Latching PWM to Prevent Multiple Pulses
- Dual Source/Sink Output Drivers
- Low Cross Conduction Output Stage
- Tighter Reference Specifications

DESCRIPTION

The UC1525B/1527B series of pulse width modulator integrated circuits are designed to offer improved performance and lowered external parts count when used in designing all types of switching power supplies. The on-chip +5.1V buried zener reference is trimmed to ±0.75% and the input common-mode range of the error amplifier includes the reference voltage, eliminating external resistors. A sync input to the oscillator allows multiple units to be slaved or a single unit to be synchronized to an external system clock. A single resistor between the CT and the discharge terminals provide a wide range of dead time adjustment. These devices also feature built-in soft-start circuitry with only an external timing capacitor required. A shut-down terminal controls both the soft-start circuitry and the output stages, providing instantaneous turn off through the PWM latch with pulsed shut-down, as well as soft-start recycle with longer shutdown commands. These functions are also controlled by an undervoltage lockout which keeps the outputs off and the soft-start capacitor discharged for sub-normal input volt-ages. This lockout circuitry includes approximately 500mV of hysteresis for jitter-free operation. Another feature of these PWM circuits is a latch follow-ing the comparator. Once a PWM pulse has been terminated for any rea-son, the outputs will remain off for the duration of the period. The latch is reset with each clock pulse. The output stages are totem-pole designs ca-pable of sourcing or sinking in excess of 200mA. The UC1525B output stage features NOR logic, giving a LOW output for an OFF state. The UC1527B utilizes OR logic which results in a HIGH output level when OFF.

ABSOLUTE MAXIMUM RATINGS

Supply Voltage, (+VIN) . . . . +40V
Collector Supply Voltage (VC). . . . . +40V
Logic Inputs . . . . –0.3V to +5.5V
Analog Inputs. . . . . –0.3V to VIN
Output Current, Source or Sink 500mA
Reference Output Current 50mA
Oscillator Charging Current 5mA
Power Dissipation at T_A = +25°C. 1000mW
Power Dissipation at T_C = +25°C 2000mW
Operating Junction Temperature . . . . –55°C to +150°C
Storage Temperature Range . . . . –65°C to +150°C
Lead Temperature (Soldering, 10 sec.) . . . . +300°C

All currents are positive into, negative out of the specified ter-
minal. Consult Packaging Section of Databook for thermal limi-
tations and considerations of packages.

RECOMMENDED OPERATING CONDITIONS
(Note 1)

Input Voltage (+VIN) . . . . +8V to +35V
Collector Supply Voltage (VC) . . . . +4.5V to +35V
Sink/Source Load Current (steady state) . . . . 0 to 100mA
Sink/Source Load Current (peak) . . . . 0 to 400mA
Reference Load Current . . . . 0 to 20mA
Oscillator Frequency Range. . . . . 100Hz to 400kHz
Oscillator Timing Resistor . . . . 2kΩ to 150kΩ
Oscillator Timing Capacitor . . . . 0.001μF to 0.1μF
Dead Time Resistor Range . . . . 0Ω to 500Ω
Note 1: Range over which the device is functional and parame-
ter limits are guaranteed.

Cross conduction charge	Per cycle, T_J = 25°C		30			30		nc
Total Standby Current								
Supply Current	VIN = 35V		14	20		14	20	mA

Note 2: Ensured by design. Not 100% tested in production.
Note 3: Tested at fosc= 40kHz (R_T = 3.6KΩ, C_T = 0.01μF, R_D = 0Ω). Approximate oscillator frequency is defined by:
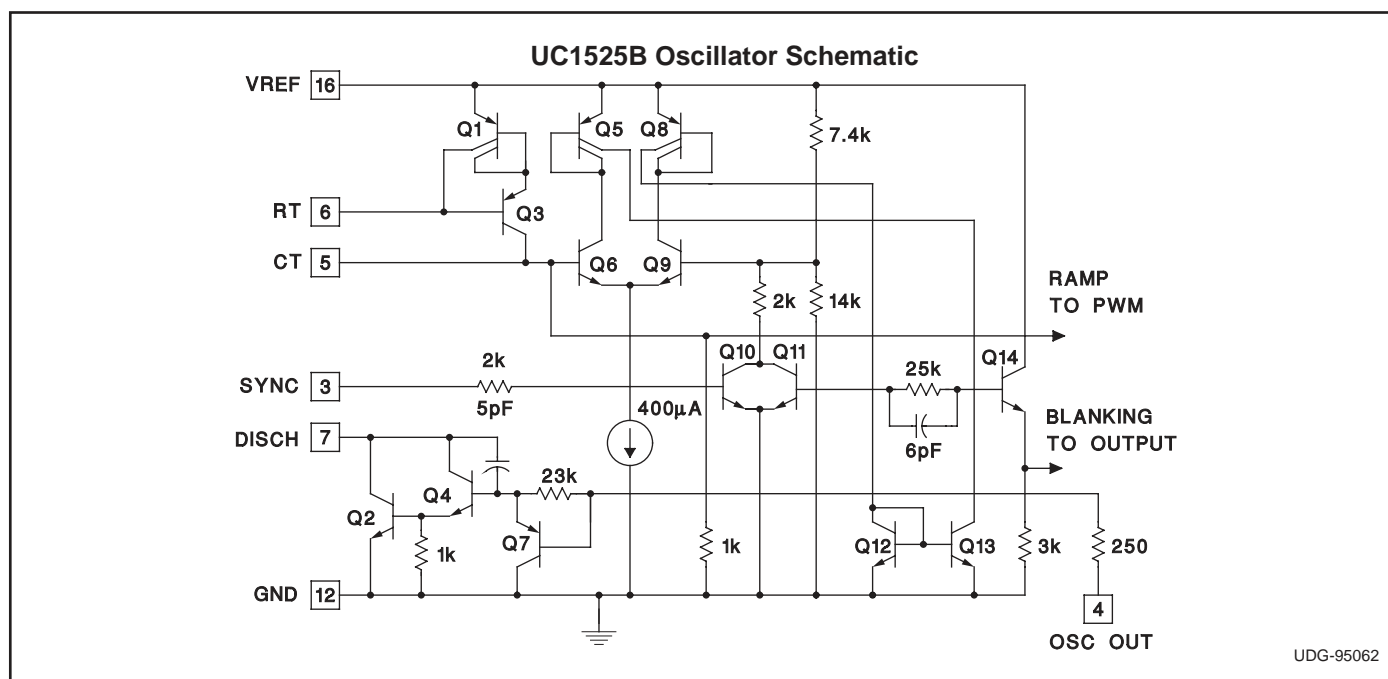

$$f = \frac{1}{C_T \bullet \left(0.7 \bullet R_T + 3R_D\right)}$$

PRINCIPLES OF OPERATION AND TYPICAL CHARACTERISTICS

UC1525B Output Circuit (1/2 Circuit Shown)

UDG-95056

UC1525B Output Saturation Characteristics

UDG-95057

UDG-95058

For single-ended supplies, the driver outputs are grounded. The VC terminal is switched to ground by the to-tem-pole source transistors on alternate oscillator cycles.

UDG-95059

In conventional push-pull bipolar designs, forward base drive is controlled by R1-R3. Rapid turn-off times for the power devices are achieved with speed-up capacitors C, and C2.

UDG-95060

The low source impedance of the output drivers provides rapid charging of power FET input capacitance while minimizing external components.

UDG-95061

Low power transformers can be driven directly by the UC1525B. Automatic reset occurs during dead time, when both ends of the primary winding are switched to ground.
## PRINCIPLES OF OPERATION AND TYPICAL CHARACTERISTICS

Shutdown Options (See Block Diagram)

Since both the compensation and soft-start terminals (Pins 9 and 8) have current source pull-ups, either can readily accept a pull-down signal which only has to sink a maximum of $100\mu A$ to turn off the outputs. This is subject to the added requirement of discharging whatever external capacitance may be attached to these pins.
An alternate approach is the use of the shutdown circuitry of Pin 10 which has been improved to enhance the available shutdown options. Activating this circuit by applying a positive signal on Pin 10 performs two functions: the PWM latch is immediately set providing the fastest turn-off signal to the external soft-start capacitor. If the shutdown command is short, the PWM signal is terminated without significant discharge of the soft-start capacitor, thus, allowing, for example, a convenient implementation of pulse-by-pulse current limiting. Holding Pin 10 high for a longer duration, however, will ultimately discharge this external capacitor, recycling slow turn-on upon release.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

OTHER QUALIFIED VERSIONS OF UC1525B, UC3525B :

● Catalog: UC3525B

● Military: UC1525B

● Space: UC1525B-SP

NOTE: Qualified Version Definitions:

  ● Catalog - TI's standard catalog product

  ● Military - QML certified for Military and Defense Applications

  ● Space - Radiation tolerant, ceramic packaging and qualified for use in Space-based application
