

## High voltage fast-switching NPN power transistor

#### **Features**

- High voltage capability
- Very high switching speed

### **Application**

■ Electronic ballast for fluorescent lighting

#### **Description**

The device is manufactured using high voltage multi epitaxial planar technology for high switching speeds and high voltage capability. It uses a cellular emitter structure with planar edge termination to enhance switching speeds while maintaining the wide RBSOA. The ST83003 is expressly designed for a new solution to be used in compact fluorescent lamps, where it is coupled with the ST93003, its complementary PNP transistor.
