## DISCLAIMER

INOLUX reserves the right to make changes without further notice to any products herein to improve reliability, function or design. INOLUX does not assume any liability arising out of the application or use of any product or circuit described herein; neither does it convey any license under its patent rights, nor the rights of others.

## LIFE SUPPORT POLICY

INOLUX's products are not authorized for use as critical components in life support devices or systems without the express written approval of the President of INOLUX or INOLUX CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

**Forward Voltage Binning**

Part Number	Performance at Test Current (500mA)		
	V <sub>f</sub> Group	Minimum (V)	Maximum (V)
IN-3531ACUV	V30	3.0	3.2
	V32	3.2	3.4
	V34	3.4	3.6
	V36	3.6	3.8
	V38	3.8	4.0
	V40	4.0	4.2

**Product Characteristics**
**Absolute Maximum Ratings**

(T<sub>j</sub> =25 °C)

Parameter	Rating
DC Forward Current (mA)	1000mA
LED Junction Temperature	150°C
LED Operating Temperature	-40°C ~ 125°C
Storage Temperature	-40°C ~ 125°C
Soldering Temperature	Max. 260°C / Max. 10 sec. (JEDEC 020c)
ESD Sensitivity	2,000V HBM (JESD-22A-114-B)
Preconditioning	Acc. to JEDEC Level 2

Notes:

1. Never operate the LEDs in reverse bias.
2. Do not drive at rated current for more than 5 seconds without proper thermal management.
3. When the LEDs are illuminating, operating current should be decided after considering the packages maximum temperature.
4. Caution: These devices emit high intensity UV/NUV light. Necessary precautions must be taken during operation. Do not look directly into the light or look through the optical system when in operation. Protective eyewear should be worn at all times during operation.
5. Lens discoloration may occur with prolonged exposure to UV/NUV light. Lens material will need to be tested for UV/NUV light compatibility and durability.

**Package Outline Dimension  
Recommended Soldering Pattern for Reflow Soldering**

Unit: mm Tolerance: +/-0.13

Outline Dimension	Solder Pattern
 <p>                     The package outline dimensions include a top view with a diameter of <math>\phi 2.60</math> and a height of <math>2.00</math> mm. The base width is <math>3.45</math> mm. The internal structure shows an anode and cathode. The recommended soldering pattern dimensions are <math>3.30</math> mm by <math>3.30</math> mm, with a central opening of <math>2.30</math> mm by <math>1.30</math> mm. The soldering pattern design shows a central opening of <math>0.50</math> mm by <math>0.65</math> mm, with a total width of <math>3.30</math> mm and a height of <math>3.30</math> mm. The stencil pattern design shows a central opening of <math>0.60</math> mm by <math>1.20</math> mm, with a total width of <math>3.20</math> mm and a height of <math>3.20</math> mm. The marked area is the opening.                 </p>	 <p>                     Recommended soldering Pad Design: Shows a central opening of <math>0.50</math> mm by <math>0.65</math> mm, with a total width of <math>3.30</math> mm and a height of <math>3.30</math> mm. The soldering pad design shows a central opening of <math>0.60</math> mm by <math>1.20</math> mm, with a total width of <math>3.20</math> mm and a height of <math>3.20</math> mm. The marked area is the opening.                 </p>
Soldering terminals may shift in the x, y direction.	Unit: mm

## Thermal Design

Thermal design of the end product is important. The thermal resistance between the junction and the solder point ( $R_{\theta J-S}$ ) and the end product should be designed to minimize the thermal resistance from the solder point to ambient in order to optimize the emitter life and optical characteristics. The maximum operation current is determined by the plot of Allowable Forward Current vs. Ambient Temperature.

The junction temperature can be correlated to the thermal resistance between the junction and ambient ( $R_{ja}$ ) by the following equation.

$$T_j = T_a + R_{ja} * W$$

$T_j$ : LED junction temperature

$T_a$ : Ambient temperature

$R_{ja}$ : Thermal resistance between the junction and ambient

$W$ : Input power ( $I_F * V_F$ )

## Reflow Soldering

The LEDs can be soldered using the parameter listed below. As a general guideline, the users are suggested to follow the recommended soldering profile provided by the manufacturer of the solder paste. Although the recommended soldering conditions are specified in the list, reflow soldering at the lowest possible temperature is preferred for the LEDs.

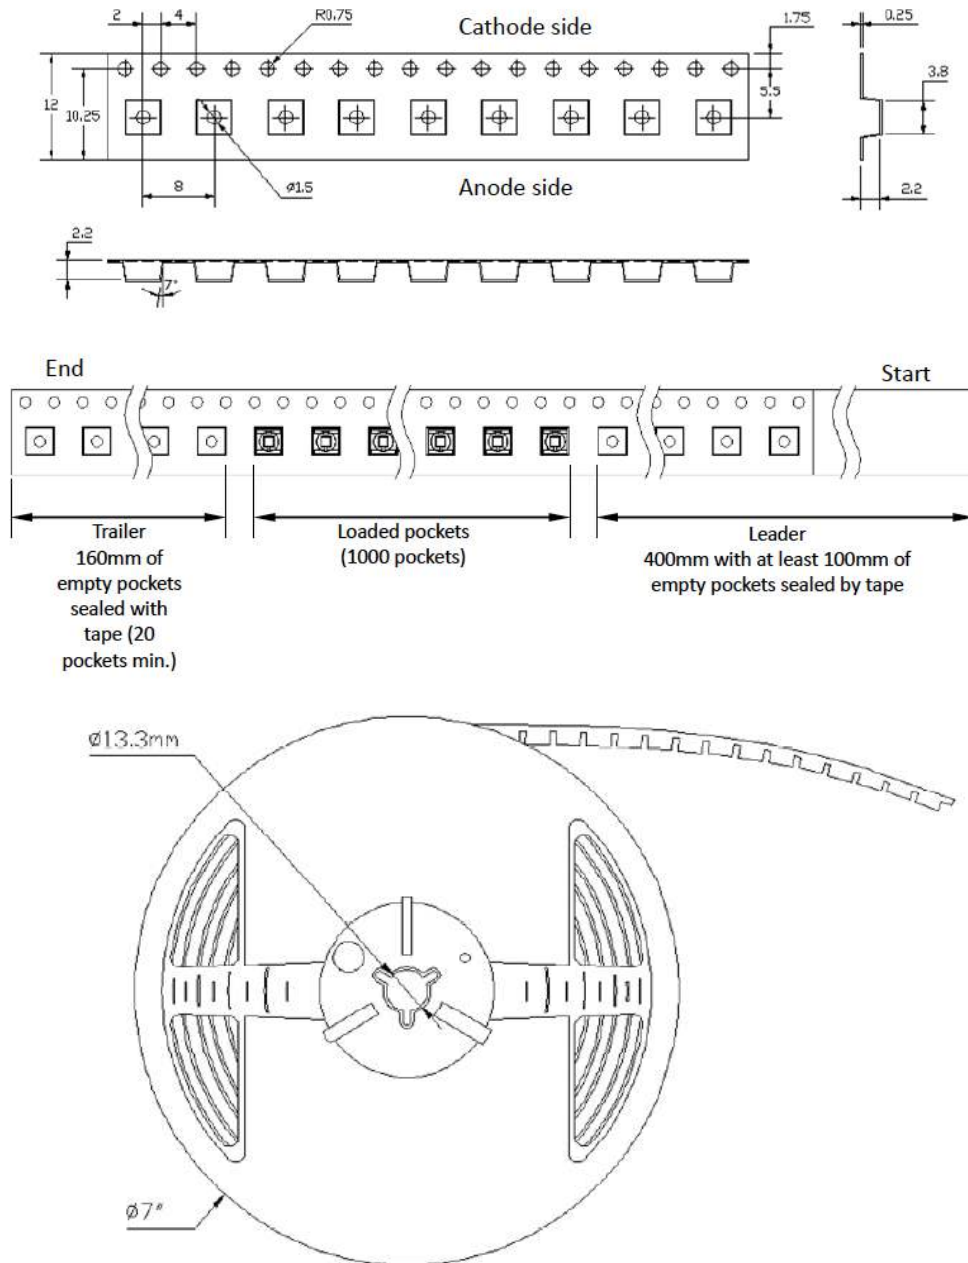

Profile Feature	Sn-Pb Eutectic Assembly	Pb-Free Assembly
Average Ramp-up Rate (T <sub>smax</sub> to T <sub>p</sub> )	3°C/second max.	3°C/second max.
Preheat		
- Temperature Min(T <sub>smin</sub> )	100°C	150°C
- Temperature Max(T <sub>smax</sub> )	150°C	200°C
- Time(t <sub>smin</sub> to t <sub>smax</sub> )	60-120 seconds	60-180 seconds
Time maintained above:		
- Temperature(T <sub>L</sub> )	183°C	217°C
- Time(t <sub>L</sub> )	60-150 seconds	60-150 seconds
Peak/classification Temperature(T <sub>p</sub> )	215°C	260°C
Time within 5°C of actual Peak Temperature(t <sub>p</sub> )	10-30 seconds	20-40 seconds
Ramp-Down Rate	6°C/second max.	6°C/second max.
Time 25°C to Peak Temperature	6 minutes max.	8 minutes max.
