# Low Voltage 18-Bit Universal Bus Driver with 3.6V Tolerant Outputs and 26 $\Omega$ Series Resistors in Outputs

### **General Description**

The 74ALVCF162835 low voltage 18-bit universal bus driver combines D-type latches and D-type flip-flops to allow data flow in transparent, latched and clocked modes.

Data flow is controlled by output-enable  $(\overline{OE})$ , latch-enable (LE), and clock (CLK) inputs. The device operates in Transparent Mode when LE is held HIGH. The device operates in clocked mode when LE is LOW and CLK is toggled. Data transfers from the Inputs (I<sub>n</sub>) to Outputs (O<sub>n</sub>) on a Positive Edge Transition of the Clock. When  $\overline{OE}$  is LOW, the output data is enabled. When  $\overline{OE}$  is HIGH the output port is in a high impedance state.

The 74ALVCF162835 is designed with  $26\Omega$  series resistors in the outputs. This design reduces noise in applications such as memory address drivers, clock drivers, and bus transceivers/transmitters.

The 74ALVCF162835 is designed for low voltage (1.65V to 3.6V)  $V_{CC}$  applications with I/O capability up to 3.6V.

The 74ALVCF162835 is fabricated with an advanced CMOS technology to achieve high speed operation while maintaining low CMOS power dissipation.

#### **Features**

- Compatible with PC133 DIMM module specifications
- 1.65V-3.6V V<sub>CC</sub> specifications provided
- 3.6V tolerant outputs
- $\blacksquare$  26 $\Omega$  series resistors in outputs
- t<sub>PD</sub> (CLK to O<sub>n</sub>)
  3.7 ns max for 3.0V to 3.6V V<sub>CC</sub>
  4.6 ns max for 2.3V to 2.7V V<sub>CC</sub>
  7.4 ns max for 1.65V to 1.95V V<sub>CC</sub>
- Power-down high impedance outputs
- Latchup conforms to JEDEC JED78
- ESD performance:

Human body model > 2000V Machine model > 200V

### **Ordering Code:**

Order Number	Package Number	Package Description	
74ALVCF162835T	MTD56	56-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide	

Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

Note 3: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the Absolute Maximum Ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 4: I<sub>O</sub> Absolute Maximum Rating must be observed.

Note 5: Floating or unused control inputs must be held HIGH or LOW.
