High Current Power Inductor SIDHP-FS1889 Series 18.2mm x 18.2mm x 8.9mm

Features

- High Current Power
- Low D.C. Resistance
- Excellent Resistance to Electromagnetic Interference
- Operating Temperature -55°C ~ 150°C
- Moisture Sensitivity Level 1

Applications

- PV Inverter, Industrial Control, New Energy
- DC/DC Converters, Motherboards, Filters
- High Current Switching Regulators
- Polyphase-Switching Regulators

High Current Power Inductor SIDHP-FS1889 Series 18.2mm x 18.2mm x 8.9mm

Saturation Current vs Temperature Rise Current Curve

• All Data is tested based on 25°C ambient temperature.

• Inductance measure condition at 100kHz, 0.5V.

• Saturation current: The actual value of DC current when the inductance decrease 30% of its initial value.

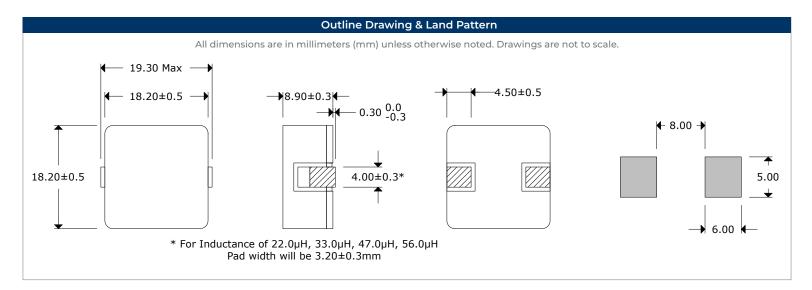

• Temperature rise current: The actual value of DC current when the temperature rise is ∆T50°C (Ta=25°C).

Notice of Use			
1. Product in packing storage condition : temperature 5~40°C, RH \leq 70%.	6. When this product will be used on a similar or new project to the original ine, sometimes it might be unable to satisfy the specifications due to different condition of usage.		
2. A storage of inductors longer than 12 months is not recommended. Within other effects, the terminals may suffer degradation, resulting in bad solderability. Therefore, all products shall be used within the period of 12 months based on the day of shipment.	7. This inductor itself does not have any protective function in abnormal condition, such as overload, short-circuit, open-circuit conditions, etc. Therefore, it shall be confirmed that there is no risk of smoke, fire, dielectric withstand voltage, insulation resistance, etc. or use in abnormal conditions protective devicesor protection circuit in the end product.		
3. Do not keep products in unsuitable storage conditions, such as areas susceptible to high temperatures, high humidity, dust or corrosion.	8. Hi-Pot test with higher voltage than spec will damage material and shorten its life.		
4. Always handle product with care.	9. If using in potting compund, the magnet wire coating might be damaged.		
5. Don't touch electrodes directly with bare hands as oil secretions may inhibit soldering. Always ensure optimum conditions for soldering.	10. Refrain from rinsing coils.
