

**CHIP NOISE FILTER NFZ32SW□□□HN10L REFERENCE SPECIFICATION****1.Scope**

This reference specification applies to NFZ32SW\_HN10L, Chip Noise Filter.

**2.Part Numbering**

(ex)   NF     Z     32     SW     301     H     N     1     0     L    
 Product ID Structure Dimension Characteristics Typical Performance Category Numbers Other Packaging  
 (L×W) Impedance at 100MHz of Circuit  
 L:Taping

**3.Rating**

## ●Operating Temperature Range.

(Ambient temperature; Self-temperature rise is not included)

-40 to +85°C

(Product temperature; Self-temperature rise is included)

-40 to +125°C

## ●Storage Temperature Range. -40 to +125°C

Customer Part Number	MURATA Part Number	Impedance at 1MHz,		Impedance at 100MHz,	DC Resistance		Rated Current (mA)
		(Ω)	Tolerance	(Ω Typ.)	(Ω)	Tolerance	
	NFZ32SW301HN10L	3.2	±30%	300	0.030	±20%	2550
	NFZ32SW901HN10L	6.8		900	0.045		2050

**4. Testing Conditions**

《Unless otherwise specified》

Temperature : Ordinary Temperature (15 to 35°C)

Humidity : Ordinary Humidity (25 to 85 %(RH))

《In case of doubt》

Temperature : 20 ± 2°C

Humidity : 60 to 70 %(RH)

Atmospheric Pressure : 86 to 106 kPa

**5.Appearance and Dimensions**

A : 2.8max.

※No marking.  
(in mm)

■Unit Mass (Typical value)

0.044 g

**6.Electrical Performance**

No.	Item	Specification	Test Method
6.1	Impedance	Impedance shall meet item 3.	Measuring Equipment : Agilent 4192A or equivalent Measuring Frequency: 1MHz
6.2	DC Resistance	DC Resistance shall meet item 3.	Measuring Equipment: Digital multi meter

**7.Mechanical Performance**

No.	Item	Specification	Test Method
7.1	Shear Test	Chip Noise Filter shall not be damaged.	Substrate: Glass-epoxy substrate Force: 10N Hold Duration: 5±1s 
7.2	Bending Test		Substrate: Glass-epoxy substrate (100 × 40 × 1.0mm) Speed of Applying Force: 0.5mm / s Deflection: 3mm Hold Duration: 5seconds. 
7.3	Vibration		Oscillation Frequency : 10 to 2000 to 10Hz for 20 minutes Total amplitude : 1.5 mm or Acceleration amplitude 98 m/s <sup>2</sup> whichever is smaller. Testing Time: A period of 2 hours in each of 3 mutually perpendicular directions. (Total 6 hours)
7.4	Solderability	The wetting area of the electrode shall be at least 90% covered with new solder coating.	Flux: Ethanol solution of rosin,25(wt)% (Immersed for 5s to 10s) Solder : Sn-3.0Ag-0.5Cu Pre-Heating: 150±10°C / 60 to 90seconds Solder Temperature: 240±5°C Immersion Time: 3±1 s
7.5	Resistance to Soldering Heat	Appearance: No damage Impedance Change: within ±30%	Flux: Ethanol solution of rosin,25(wt)% (Immersed for 5s to 10s) Solder : Sn-3.0Ag-0.5Cu Pre-Heating: 150±10°C / 60 to 90seconds Solder Temperature: 270±5°C Immersion Time: 10±1 s Then measured after exposure in the room condition for 24±2 hours.

**8.Environmental Performance (It shall be soldered on the substrate.)**

No.	Item	Specification	Test Method
8.1	Heat Resistance	Appearance: No damage Impedance Change: within ± 30% DC Resistance Change: within ± 10%	Temperature: 85±2°C Time: 1000± <sup>48</sup> <sub>0</sub> hours Then measured after exposure in the room condition for 24±2 hours.
8.2	Cold Resistance		Temperature: -40±2°C Time: 1000± <sup>48</sup> <sub>0</sub> hours Then measured after exposure in the room condition for 24±2 hours.
8.3	Humidity		Temperature: 40±2°C Humidity: 90~95%(RH) Time: 1000± <sup>48</sup> <sub>0</sub> hours Then measured after exposure in the room condition for 24±2 hours.
8.4	Temperature Cycle		1 cycle: 1 step: -40±2°C / 30±3 minutes 2 step: Ordinary temp. / 10 to 15 minutes 3 step: +85±2°C / 30±3 min. 4 step: Ordinary temp. / 10 to 15 minutes Total of 10 cycles Then measured after exposure in the room condition for 24±2 hours.

**9. Specification of Packaging**

**9.1 Appearance and Dimensions of plastic tape**

**9.2 Specification of Taping**

- (1) Packing quantity (standard quantity)  
2,000 pcs / reel
- (2) Packing Method  
Products shall be packed in the each embossed cavity of plastic tape and sealed by cover tape.
- (3) Sprocket hole  
The sprocket holes are to the right as the tape is pulled toward the user.
- (4) Spliced point  
Plastic tape and Cover tape has no spliced point.
- (5) Missing components number  
Missing components number within 0.025 % of the number per reel or 1 pc., whichever is greater, and are not continuous. The specified quantity per reel is kept.

**9.3 Pull Strength**

Embossed carrier tape	10N min.
Cover tape	5N min.

**9.4 Peeling off force of cover tape**

Speed of Peeling off	300mm/min
Peeling off force	0.2 to 0.7N (minimum value is typical)

**9.5 Dimensions of Leader-tape, Trailer and Reel**

There shall be leader-tape (cover tape) and trailer-tape (empty tape) as follows.

**9.6 Marking for reel**

Customer part number, MURATA part number, Inspection number(\*1), RoHS marking(\*2), Quantity etc ...

\*1) « Expression of Inspection No. »

□□	0000	xxx
(1)	(2)	(3)

(1) Factory Code

(2) Date

First digit : Year / Last digit of year

Second digit : Month / Jan. to Sep. → 1 to 9, Oct. to Dec. → O, N, D

Third, Fourth digit : Day

(3) Serial No.

\*2) « Expression of RoHS marking »

ROHS - Y (△)

(1) (2)

(1) RoHS regulation conformity parts.

(2) MURATA classification number

**9.7 Marking for Outside package (corrugated paper box)**

Customer name, Purchasing order number, Customer part number, MURATA part number, RoHS marking (\*2), Quantity, etc ...

**9.8. Specification of Outer Case**

Outer Case Dimensions (mm)			Standard Reel Quantity in Outer Case (Reel)
W	D	H	
186	186	93	5

\* Above Outer Case size is typical. It depends on a quantity of an order.

**10. ⚠ Caution****10.1 Limitation of Applications**

Please contact us before using our products for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property.

- |  |  |
|--|--|
| (1) Aircraft equipment                                       | (7) Traffic signal equipment   |
| (2) Aerospace equipment                                      | (8) Disaster prevention / crime prevention equipment                     |
| (3) Undersea equipment                                       | (9) Data-processing equipment  |
| (4) Power plant control equipment                            | (10) Applications of similar complexity and /or reliability requirements |
| (5) Medical equipment  | to the applications listed in the above                                  |
| (6) Transportation equipment (vehicles, trains, ships, etc.) |  |

**10.2. Corrosive gas**

Please refrain from use since contact with environments with corrosive gases (sulfur gas [hydrogen sulfide, sulfur dioxide, etc.], chlorine, ammonia, etc.) or oils (cutting oil, silicone oil, etc.) that have come into contact with the previously stated corrosive gas environment will result in deterioration of product quality or an open from deterioration due to corrosion of product electrode, etc. We will not bear any responsibility for use under these environments.

**11. Notice**

This product is designed for solder mounting. (Reflow soldering only)

Please consult us in advance for applying other mounting method such as conductive adhesive.

**11.1 Land pattern designing (Reflow Soldering)**

Recommended land pattern for reflow soldering is as follows:

It has been designed for Electric characteristics and solderability.

Please follow the recommended patterns. Otherwise, their performance which includes electrical performance or solderability may be affected, or result to "position shift" in soldering process.

(in mm)

**11.2 Flux, Solder**

Flux	<ul style="list-style-type: none"> <li>• Use rosin-based flux.</li> <li>• Don't use highly acidic flux with halide content exceeding 0.2(wt)% (chlorine conversion value).</li> <li>• Don't use water-soluble flux.</li> </ul>
Solder	<ul style="list-style-type: none"> <li>• Use Sn-3.0Ag-0.5Cu solder</li> <li>• Standard thickness of solder paste : 100 <math>\mu</math> m to 150 <math>\mu</math> m</li> </ul>

Other flux (except above) Please contact us for details, then use.

**11.3 soldering conditions (Reflow)**

- Pre-heating should be in such a way that the temperature difference between solder and product surface is limited to 100°C max. Cooling into solvent after soldering also should be in such a way that the temperature difference is limited to 100°C max.  
Insufficient pre-heating may cause cracks on the product, resulting in the deterioration of product quality.
- Standard soldering profile and the limit soldering profile is as follows.  
The excessive limit soldering conditions may cause leaching of the electrode and / or resulting in the deterioration of product quality.

	Standard Profile	Limit Profile
Pre-heating	150~180°C、90s±30s	
Heating	above 220°C、30s~60s	above 230°C、60s max.
Peak temperature	245±3°C	260°C、10s
Cycle of reflow	2 times	2 times

**11.4 Reworking with soldering iron.**

The following conditions must be strictly followed when using a soldering iron.

Pre-heating	150°C, 1 min
Tip temperature	350°C max.
Soldering iron output	80W max.
Tip diameter	φ 3mm max.
Soldering time	3 (+1, -0)s
Times	2 times

Note :Do not directly touch the products with the tip of the soldering iron in order to prevent the crack on the products due to the thermal shock.

**11.5 Solder Volume**

- Solder shall be used not to be exceeded the upper limits as shown below.
- Accordingly increasing the solder volume, the mechanical stress to Chip is also increased. Exceeding solder volume may cause the failure of mechanical or electrical performance.

$$\frac{1}{3}T \leq t \leq T$$

(T: Lower flange thickness)

**11.6 Product's location**

The following shall be considered when designing and laying out P.C.B.'s.

- (1) P.C.B. shall be designed so that products are not subject to the mechanical stress due to warping the board.

[Products direction]

Products shall be located in the sideways direction (Length: $a < b$ ) to the mechanical stress.

- (2) Components location on P.C.B. separation.

It is effective to implement the following measures, to reduce stress in separating the board.

It is best to implement all of the following three measures; however, implement as many measures as possible to reduce stress.

Contents of Measures	Stress Level
(1) Turn the mounting direction of the component parallel to the board separation surface.	$A > D$ *1
(2) Add slits in the board separation part.	$A > B$
(3) Keep the mounting position of the component away from the board separation surface.	$A > C$

\*1  $A > D$  is valid when stress is added vertically to the perforation as with Hand Separation.  
If a Cutting Disc is used, stress will be diagonal to the PCB, therefore  $A > D$  is invalid.

- (3) Mounting Components Near Screw Holes

When a component is mounted near a screw hole, it may be affected by the board deflection that occurs during the tightening of the screw. Mount the component in a position as far away from the screw holes as possible.

**11.7 Cleaning Conditions**

Products shall be cleaned on the following conditions.

- (1) Cleaning temperature shall be limited to 60°C max.(40°C max for IPA.)
- (2) Ultrasonic cleaning shall comply with the following conditions with avoiding the resonance phenomenon at the mounted products and P.C.B.  
Power : 20 W / l max.      Frequency : 28kHz to 40kHz      Time : 5 minutes max.
- (3) Cleaner
  1. Alternative cleaner
    - Isopropyl alcohol (IPA)
  2. Aqueous agent
    - PINE ALPHA ST-100S
- (4) There shall be no residual flux and residual cleaner after cleaning.  
In the case of using aqueous agent, products shall be dried completely after rinse with de-ionized water in order to remove the cleaner.
- (5) Other cleaning  
Please contact us.

**11.8 Resin coating**

The impedance value may change due to high cure-stress of resin to be used for coating/molding products. An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating condition etc. Some resin contains some impurities or chloride possible to generate chlorine by hydrolysis under some operating condition may cause corrosion of wire of coil, leading to open circuit. So, please pay your careful attention when you select resin in case of coating/molding the products with the resin. Prior to use the coating resin, please make sure no reliability issue is observed by evaluating products mounted on your board.

**11.9 Caution for use**

- Sharp material such as a pair of tweezers or other material such as bristles of cleaning brush, shall not be touched to the winding portion to prevent the breaking of wire.
- Mechanical shock should not be applied to the products mounted on the board to prevent the breaking of the core.

**11.10 Handling of a substrate**

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate.

Excessive mechanical stress may cause cracking in the product.

**Bending****Twisting****11.11 Storage and Handling Requirements****(1) Storage period**

Use the products within 12 months after delivered.

Solderability should be checked if this period is exceeded.

**(2) Storage conditions**

- Products should be stored in the warehouse on the following conditions.

Temperature : -10 ~ 40°C

Humidity : 15 to 85% relative humidity No rapid change on temperature and humidity

The electrode of the products is coated with solder. Don't keep products in corrosive gases such as sulfur, chlorine gas or acid, or it may cause oxidization of electrode, resulting in poor solderability.

- Products should not be stored on bulk packaging condition to prevent the chipping of the core and the breaking of winding wire caused by the collision between the products.
- Products should be stored on the palette for the prevention of the influence from humidity, dust and so on.
- Products should be stored in the warehouse without heat shock, vibration, direct sunlight and so on.

**(3) Handling Condition**

Care should be taken when transporting or handling product to avoid excessive vibration or mechanical shock.

**12.  Note**

- (1) Please make sure that your product has been evaluated in view of your specifications with our product being mounted to your product.
- (2) You are requested not to use our product deviating from the reference specifications.
- (3) The contents of this reference specification are subject to change without advance notice. Please approve our product specifications or transact the approval sheet for product specifications before ordering.
