Table 5. Functional Pin Description

Name	Pin Number	Description
RF_{in} (1)	3	RF input for the power amplifier. RF_{in} has an RF choke to ground internal to the package. No external blocking is necessary unless externally applied DC is present on the trace.
RF_{out}/ V_{DD}	8, 9	RF output for the power amplifier. This pin is DC coupled and requires a DC blocking capacitor.
V_{BA}	12	Bias voltage and current adjust pin.
GND	Backside Center Metal	The center metal base of the QFN package provides both DC and RF ground as well as the heat sink contact for the IC.

1. The RF input has a DC path to ground and therefore may require an external decoupling capacitor.

FAILURE ANALYSIS

At this time, because of the physical characteristics of the part, failure analysis is limited to electrical signature analysis. In cases where Freescale is contractually obligated to perform failure analysis (FA) services, full FA may be performed by third party vendors with moderate success. For updates contact your local Freescale Sales Office.

REVISION HISTORY

The following table summarizes revisions to this document.

Revision	Date	Description
0	Dec. 2010	• Initial Release of Data Sheet
1	Sept. 2014	• Table 2, Maximum Ratings: updated Junction Temperature from 150°C to 175°C to reflect recent test results of the device, p. 1 • Table 6, ESD Protection Characteristics, removed the word “Minimum” after the ESD class rating. ESD ratings are characterized during new product development but are not 100% tested during production. ESD ratings provided in the data sheet are intended to be used as a guideline when handling ESD sensitive devices, p. 2 • Revised Failure Analysis information, p. 17
