*2 Supported only by the CPU Units with unit version 1.01 or later and the Sysmac Studio version 1.02 or higher.

EtherCAT Network Configuration

With an NJ-Series, you can use an EtherCAT network as a basic system.

Machine Automation Controller

NJ-Series

Machine Automation Controller

NJ-Series

New controller that covers functions and high-speed processing required for machine control and safety, reliability and maintainability that are the features of industrial controllers.

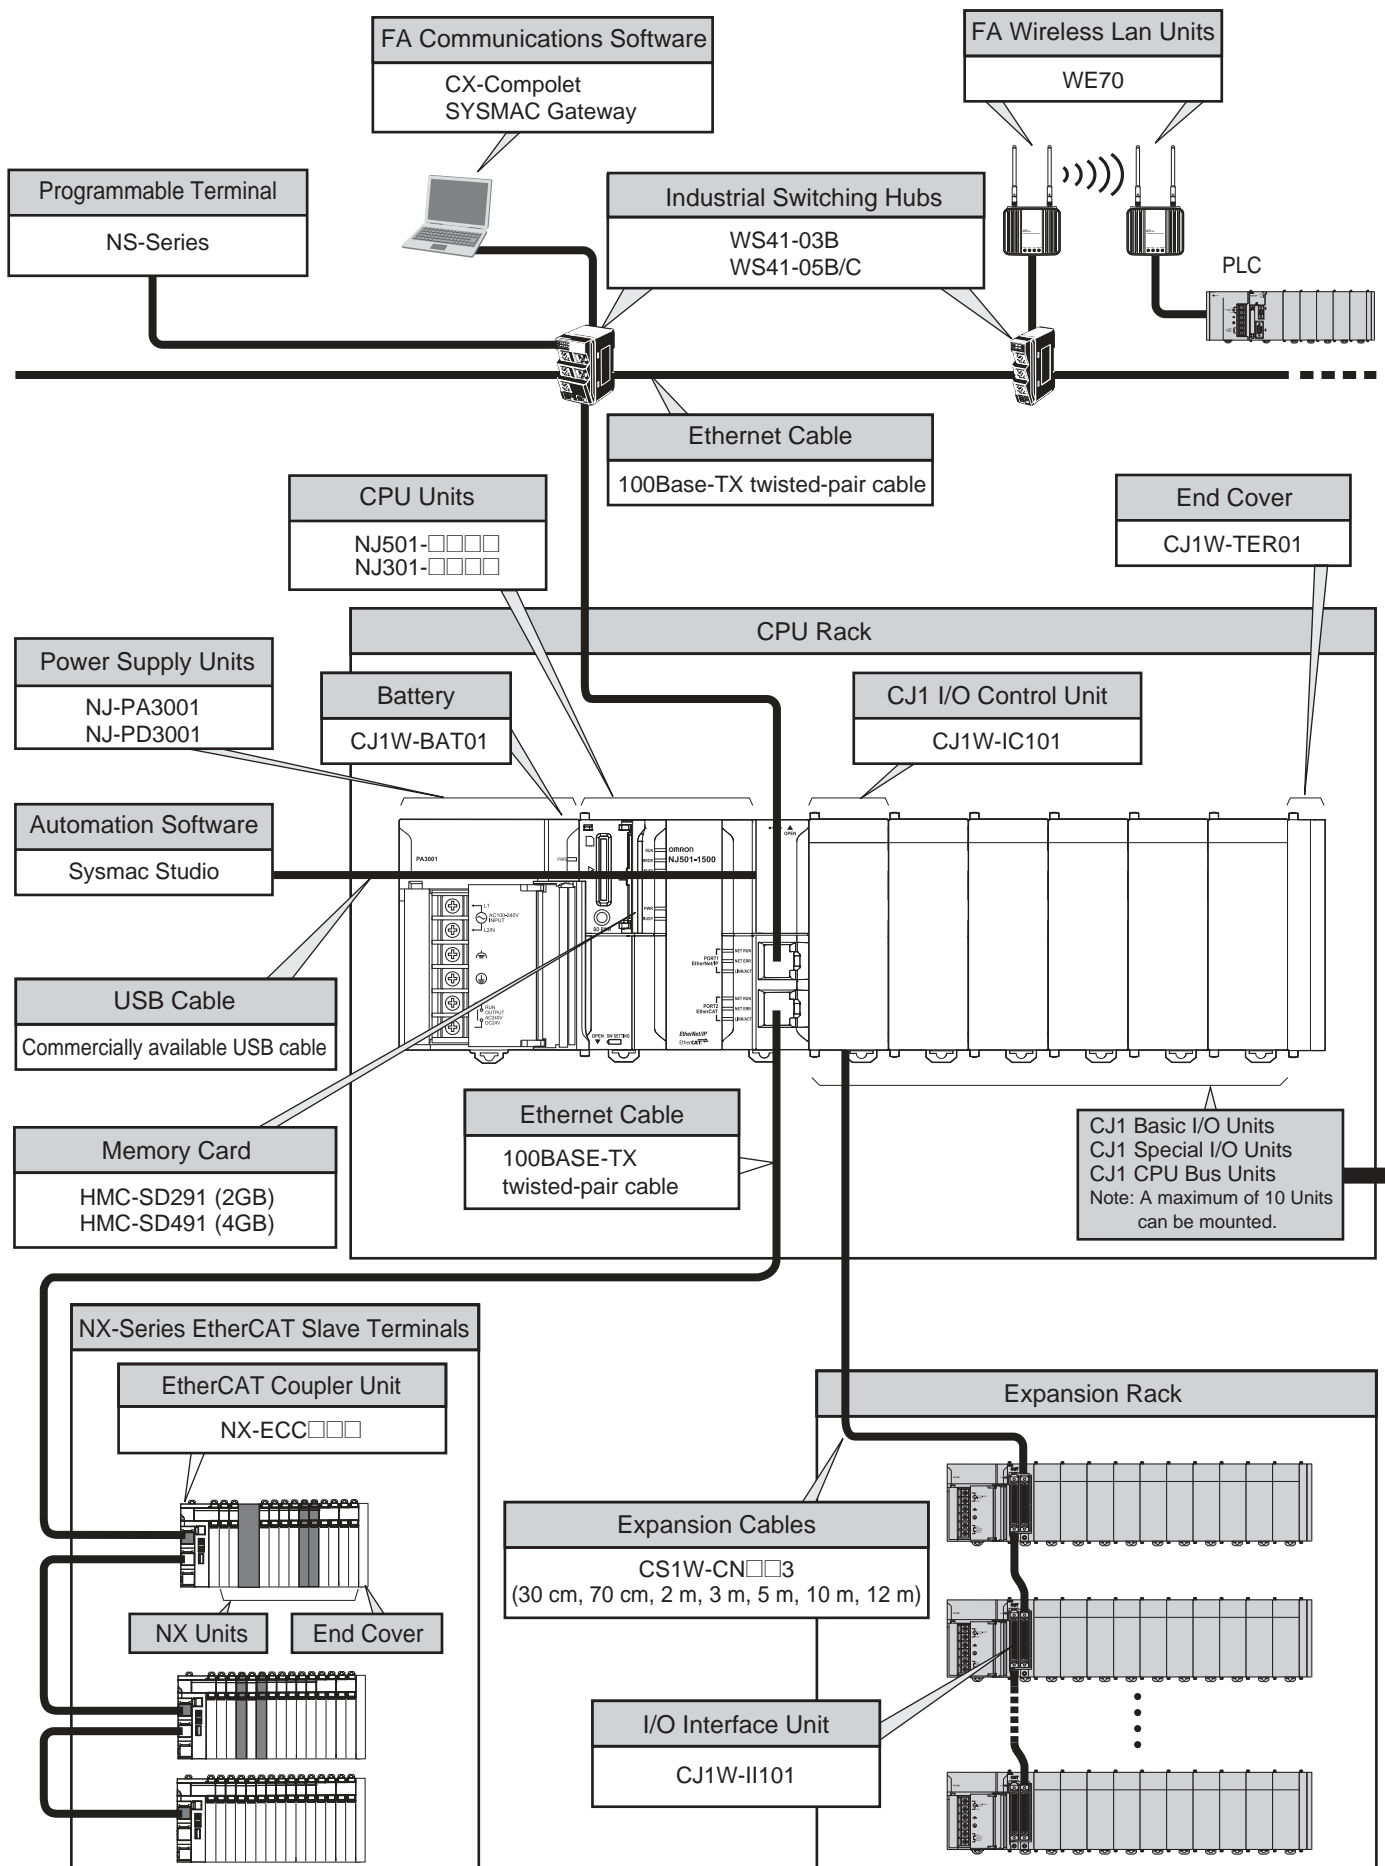

NJ501-□□□□

Features

- Architecture based on the Intel® Atom™ processor achieves high-speed processing.
 - The user program including the double precision floating point arithmetic instruction that is necessary for the coordinates correction, ST language and Function Blocks is executed fast, as well as the basic instructions and the special instructions.
- Integration of Logic and Motion in one CPU.
- Scalable CPUs for 4, 8, 16, 32 and 64 axes.
- Synchronous control of all machine network devices : vision sensors, servo drives and field devices with the machine control network, EtherCAT.
Synchronize the PLC Engine and the Motion Engine with the EtherCAT control period. Fast and highly-accurate control is possible.
- Standard programming : Conforms IEC 61131-3 standards, variable-based instructions including the PLCopen® Motion function blocks
- Complete and robust machine automation: fast control performance and basic functions and reliability of industrial controllers.
 - Fan-free operation in ambient temperature between 0 to 55°C.
 - Complete RAS functions: Transmission frame error check, timeout, bus diagnosis, Watchdog (WDT), memory check, and topology check, etc.
- KC Registration
- The Controller can be directly connected to a database. No special Unit, software, nor middleware is required. (NJ501-1□□20)

NJ-Series CPU Racks

A NJ-Series CPU Rack consists of a CPU Unit, Power Supply Unit, Configuration Units (Basic I/O Units, Special I/O Units, and CPU Bus Units), and an End Cover.

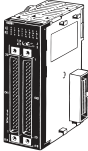

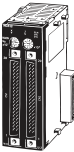

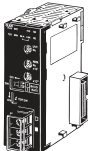

Even though the NJ-Series Controllers do not have Backplanes, the term “slot” still used to refer to the location of Units. Slot numbers are assigned in order to Units from left to right on the CPU Rack (slot 0, slot 1, slot 2, etc.).

● Required Units

Rack	Unit name	Required number of Units
CPU Rack	NJ-Series Power Supply Unit	1
	NJ-Series CPU Unit	1
	I/O Control Unit	Required only for mounting to an Expansion Rack. Mount the I/O Control Unit immediately to the right of the CPU Unit.
	Number of Configuration Units	10 max. (Same for all models of CPU Unit.) (The number of Basic I/O Units, Special I/O Units, and CPU Bus Units can be varied. The number does not include the I/O Control Unit.)
	End Cover	1 (Included with CPU Unit.)
	NJ-Series SD Memory Card	Install as required.

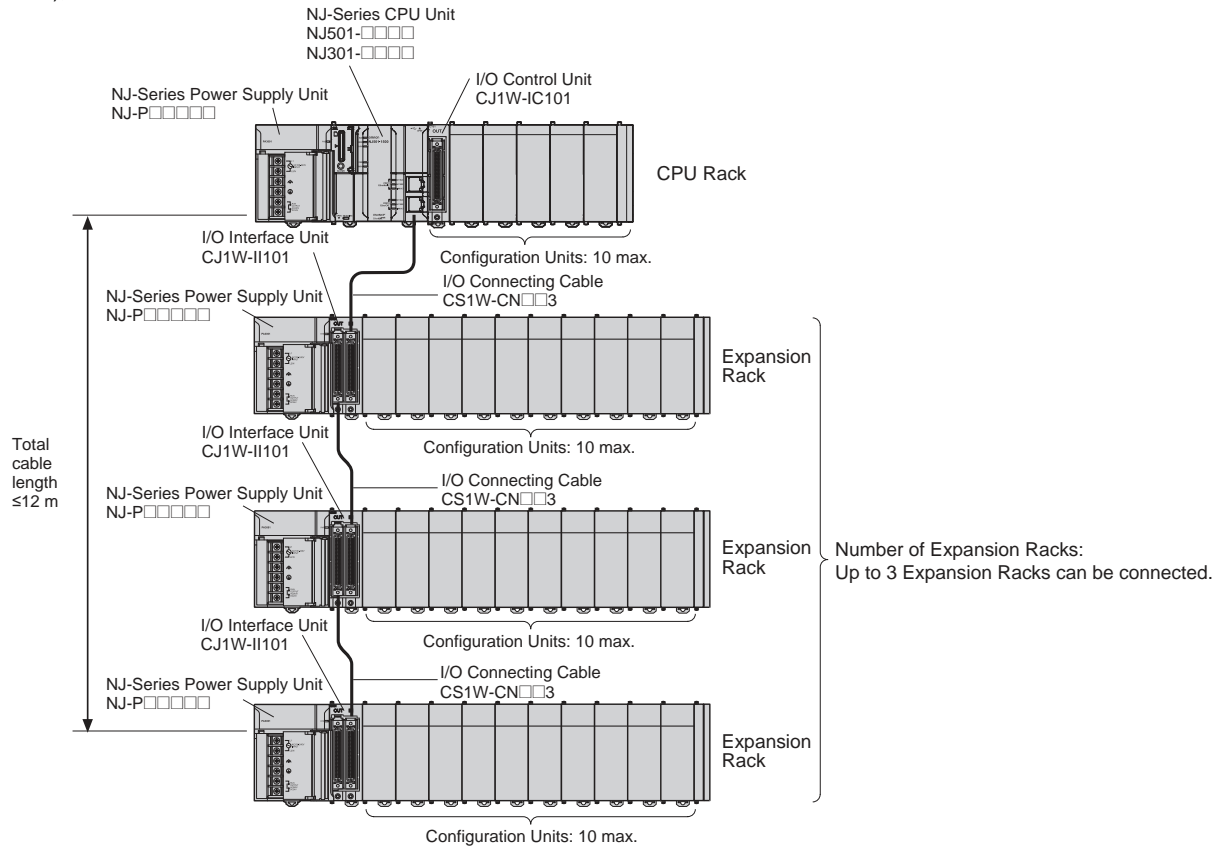

● Types of Configuration Units

In the NJ-Series, Configuration Units are classified into the following three types. The number of Racks differs depending on the type.

Type	Appearance (example)	Description	Unit recognition method	Max. Units mountable per CPU Unit
Basic I/O Units		Units with contact inputs and contact outputs.	Recognized by the CPU Unit according to the position of the Rack and slot.	A maximum of 40 Units can be mounted.
Special I/O Units		Special I/O Units provide more advanced functions than do Basic I/O Units, including I/O other than contact inputs and contact outputs. Examples of Special I/O Units are Analog I/O Units and High-speed Counter Units. They differ from CPU Bus Units (including Network Communications Units) in having a smaller area for exchanging data with the CPU Unit.	Recognized by the CPU Unit according to the unit number (0 to 95) set with the rotary switches on the front panel.	A maximum of 40 Units can be connected. (Multiple unit numbers are allocated per Unit, depending on the model and settings.)
CPU Bus Units		CPU Bus Units exchange data with the CPU Unit via the CPU Bus. Examples of CPU Bus Units are Network Communications Units and Serial Communications Units. They differ from Special I/O Units in having a larger area for exchanging data with the CPU Unit.	Recognized by the CPU Unit according to the unit number (0 to F) set with the rotary switch on the front panel.	A maximum of 16 Units can be mounted.

NJ-Series Expansion Racks

A NJ-Series Expansion Rack consists of a Power Supply Unit, an I/O Interface Unit, Configuration Units (Basic I/O Units, Special I/O Units, and CPU Bus Units), and an End Cover.

● Required Units

Rack	Unit name	Required number of Units
CPU Rack	I/O Control Unit	One Unit. Required only when an Expansion Rack is used. Mount the I/O Control Unit immediately to the right of the CPU Unit. *1
	Power Supply Unit	One Unit
Expansion Rack	I/O Interface Unit	One Unit. Mount the I/O Interface Unit immediately to the right of the Power Supply Unit. *2
	Number of Configuration Units	Ten Units max. (The number of Basic I/O Units, Special I/O Units, and CPU Bus Units can be varied. This number does not include the I/O Interface Unit.)
	End Cover	One (Included with the I/O Interface Unit.)

*1 Mounting the I/O Control Unit in any other location may cause faulty operation.

*2 Mounting the I/O Interface Unit in any other location may cause faulty operation.

Configuration Units

● Maximum Number of Configuration Units That Can Be Mounted

CPU Unit	Model	Total Units	No. of Units on CPU Rack	No. of Expansion Racks
NJ-Series CPU Unit	NJ501-□□□□	40	10 per Rack	3 Racks x 10 Units
	NJ301-□□□□			

Note: It may not be possible to mount the maximum number of configuration Units depending on the specific Units that are mounted. Refer to the next page for details.

● Number of mountable units per Configuration Unit

Basic I/O Units, Special I/O Units, and CPU Bus Units of the CJ-Series are used as Configuration Units of the NJ-Series. All Basic I/O Units are useable. Not all Special I/O Units and CPU Bus Units can be used. Units that can be used are shown in the list. In addition, note that the number of units that can be connected to one CPU vary depending on the units.

*1 Increases by 0.15 A/Unit when an NT-AL001 RS-232C/RS-422A Link Adapter is used. Increases by 0.04 A/Unit when a CJ1W-CIF11 RS-422A Converter is used. Increases by 0.20 A/Unit when an NV3W-M□20L Programmable Terminal is used.

*2 Supported only by the EtherNet/IP Units with unit version 2.1 or later, CPU Units with unit version 1.01 or later and the Sysmac Studio version 1.02 or higher.

*3 Includes the weight of accessory connectors.

Power Supply Units Current Consumption

Checking Current Consumption and Power Consumption

After selecting a Power Supply Unit based on considerations such as the power supply voltage, calculate the current and power requirements for each Rack.

Condition 1: Current Requirements

There are two voltage groups for internal power consumption: 5 V and 24 V.

Current consumption at 5 V (internal logic power supply)

Current consumption at 24 V (relay driving power supply)

Condition 2: Power Requirements

For each Rack, the upper limits are determined for the current and power that can be provided to the mounted Units. Design the system so that the total current consumption for all the mounted Units does not exceed the maximum total power or the maximum current supplied for the voltage groups shown in the following tables.

The maximum current and total power supplied for CPU Racks and Expansion Racks according to the Power Supply Unit model are shown below.

Note: 1. For CPU Racks, include the CPU Unit current and power consumption in the calculations. When expanding, also include the current and power consumption of the I/O Control Unit in the calculations.

2. For Expansion Racks, include the I/O Interface Unit current and power consumption in the calculations.

Power Supply Units	Max. current supplied			(C) Max. total power supplied
	(A) 5-VDC CPU Racks*	(A)5-VDC Expansion Rack	(B) 24 VDC	
NJ-PA3001	6.0 A	6.0 A	1.0 A	30 W
NJ-PD3001	6.0 A	6.0 A	1.0 A	30 W

* Including supply to the CPU Unit.

Example: Calculating Total Current and Power Consumption

Example: When the Following Units are Mounted to a NJ-Series CPU Rack Using a NJ-PA3001 Power Supply Unit

Unit type	Model	Quantity	Voltage group	
			5 V	24 V
CPU Unit	NJ501-1500	1	1.90 A	---
I/O Control Unit	CJ1W-IC101	1	0.02 A	---
Basic I/O Units (Input Units)	CJ1W-ID211	2	0.08 A	---
	CJ1W-ID231	2	0.09 A	---
Basic I/O Units (Output Units)	CJ1W-OC201	2	0.09 A	0.048 A
Special I/O Unit	CJ1W-DA041	1	0.12 A	---
CPU Bus Unit	CJ1W-SCU22	1	0.29 A	---
Current consumption	Total		1.9 A+0.02 A+0.08 A × 2+0.09 A × 2+0.09 A × 2+0.12 A+0.29	0.048 A × 2
	Result		2.85 A (≤ 6.0 A)	0.096 A (≤ 1.0 A)
Power consumption	Total		2.85 A × 5 V = 14.25 W	0.096 A × 24 V = 2.3 W
	Result		14.25 W + 2.3 W = 16.5 W (≤ 30 W)	

Note: For details on Unit current consumption, refer to Ordering Information.

Using the Sysmac Studio to Display Current Consumption and Width

CPU Rack and Expansion Rack current consumption and width can be displayed by selecting **CPU/Expansion Racks** from the **Configurations and Setup** in the Multiview Explorer. If the capacity of the Power Supply Unit is exceeded, an error icon is displayed in the power supply unit of a corresponding rack. For details, refer to Sysmac Studio Version 1 Operation manual (W504).

Mounting Dimensions

DIN Track model number	A
PFP-100N2	16 mm
PFP-100N	7.3 mm
FPP-50N	7.3 mm

Mounting Height

With a height of 90.0 mm, the CPU Unit is the highest component in an NJ-Series CPU Rack. It is also higher than any Units on an Expansion Rack. When a cable is connected (such as a connecting cable to Support Software), however, even greater height is required. Allow sufficient depth in the control panel containing the Controller.

Note: Consider the following points when expanding the configuration:
 The total length of I/O Connecting Cable must not exceed 12 m.
 I/O Connecting Cables require the bending radius indicated below.

Expansion Cable

Note: Outer diameter of cable: 8.6 mm.

Enclosure		Mounted in a panel	
Grounding Method		Ground to less than 100 Ω	
Dimensions (height×depth×width)		90 mm × 90 mm × 90 mm	
Weight		550 g (including the End Cover)	
Current Consumption		5 VDC, 1.90 A (including SD Memory Card and End Cover)	
Operation Environment	Ambient Operating Temperature	0 to 55°C	
	Ambient Operating Humidity	10% to 90% (with no condensation)	
	Atmosphere	Must be free from corrosive gases.	
	Ambient Storage Temperature	-20 to 75°C (excluding battery)	
	Altitude	2,000 m or less	
	Pollution Degree	2 or less: Conforms to JIS B3502 and IEC 61131-2.	
	Noise Immunity	2 kV on power supply line (Conforms to IEC 61000-4-4.)	
	Overvoltage Category	Category II: Conforms to JIS B3502 and IEC 61131-2.	
	EMC Immunity Level	Zone B	
Vibration Resistance	Conforms to IEC 60068-2-6. 5 to 8.4 Hz with 3.5-mm amplitude, 8.4 to 150 Hz Acceleration of 9.8 m/s ² for 100 min in X, Y, and Z directions (10 sweeps of 10 min each = 100 min total)		
	Shock Resistance	Conforms to IEC 60068-2-27. 147 m/s ² , 3 times in X, Y, and Z directions (100 m/s ² for Relay Output Units)	
Battery	Life	5 years at 25°C	
	Model	CJ1W-BAT01	
Applicable Standards		Conforms to cULus, NK, LR and EC Directives, KC Registration*.	

* Supported only by the CPU Units with unit version 1.01 or later.

Motion Control	Control Modes		position control, velocity control, torque control	
	Axis Types		Servo axes, virtual servo axes, encoder axes, and virtual encoder axes	
	Positions that can be managed		Command positions and actual positions	
	Single-axis	Single-axis Position Control	Absolute Positioning	Positioning is performed for a target position that is specified with an absolute value.
			Relative Positioning	Positioning is performed for a specified travel distance from the command current position.
			Interrupt Feeding	Positioning is performed for a specified travel distance from the position where an interrupt input was received from an external input.
			Cyclic synchronous absolute positioning *1	The function which outputs command positions in every control period in the position control mode.
		Single-axis Velocity Control	Velocity Control	Velocity control is performed in Position Control Mode.
			Cyclic Synchronous Velocity Control	A velocity command is output each control period in Velocity Control Mode.
		Single-axis Torque Control	Torque Control	The torque of the motor is controlled.
		Single-axis Synchronized Control	Starting Cam Operation	A cam motion is performed using the specified cam table.
			Ending Cam Operation	The cam motion for the axis that is specified with the input parameter is ended.
			Starting Gear Operation	A gear motion with the specified gear ratio is performed between a master axis and slave axis.
			Positioning Gear Operation	A gear motion with the specified gear ratio and sync position is performed between a master axis and slave axis.
			Ending Gear Operation	The specified gear motion or positioning gear motion is ended.
			Synchronous Positioning	Positioning is performed in sync with a specified master axis.
			Master Axis Phase Shift	The phase of a master axis in synchronized control is shifted.
		Single-axis Manual Operation	Powering the Servo	The Servo in the Servo Drive is turned ON to enable axis motion.
	Jogging		An axis is jogged at a specified target velocity.	
	Auxiliary Functions for Single-axis Control	Resetting Axis Errors	Axes errors are cleared.	
		Homing	A motor is operated and the limit signals, home proximity signal, and home signal are used to define home.	
		Homing with parameter *1	Specifying the parameter, a motor is operated and the limit signals, home proximity signal, and home signal are used to define home.	
		High-speed Homing	Positioning is performed for an absolute target position of 0 to return to home.	
		Stopping	An axis is decelerated to a stop.	
		Immediately Stopping	An axis is stopped immediately.	
		Setting Override Factors	The target velocity of an axis can be changed.	
		Changing the Current Position	The command current position or actual current position of an axis can be changed to any position.	
		Enabling External Latches	The position of an axis is recorded when a trigger occurs.	
		Disabling External Latches	The current latch is disabled.	
		Zone Monitoring	You can monitor the command position or actual position of an axis to see when it is within a specified range (zone).	
		Enabling digital cam switches *4	You can turn a digital output ON and OFF according to the position of an axis.	
		Monitoring Axis Following Error	You can monitor whether the difference between the command positions or actual positions of two specified axes exceeds a threshold value.	
		Resetting the Following Error	The error between the command current position and actual current position is set to 0.	
Torque Limit	The torque control function of the Servo Drive can be enabled or disabled and the torque limits can be set to control the output torque.			
Start velocity *5	You can set the initial velocity when axis motion starts.			

*1. Supported only by the CPU Units with unit version 1.03 or later.

*4. Supported only by the CPU Units with unit version 1.06 or later.

*5. Supported only by the CPU Units with unit version 1.05 or later.

Motion Control	Axes Groups	Multi-axes Coordinated Control	Absolute Linear Interpolation	Linear interpolation is performed to a specified absolute position.	
			Relative Linear Interpolation	Linear interpolation is performed to a specified relative position.	
			Circular 2D Interpolation	Circular interpolation is performed for two axes.	
			Axes Group Cyclic Synchronous Absolute Positioning	A positioning command is output each control period in Position Control Mode.*3	
		Auxiliary Functions for Multi-axes Coordinated Control	Resetting Axes Group Errors	Axes group errors and axis errors are cleared.	
			Enabling Axes Groups	Motion of an axes group is enabled.	
			Disabling Axes Groups	Motion of an axes group is disabled.	
			Stopping Axes Groups	All axes in interpolated motion are decelerated to a stop.	
			Immediately Stopping Axes Groups	All axes in interpolated motion are stopped immediately.	
			Setting Axes Group Override Factors	The blended target velocity is changed during interpolated motion.	
			Reading Axes Group Positions	The command current positions and actual current positions of an axes group can be read.*3	
			Changing the Axes in an Axes Group	The Composition Axes parameter in the axes group parameters can be overwritten temporarily.*3	
		Common Items	Cams	Setting Cam Table Properties	The end point index of the cam table that is specified in the input parameter is changed.
				Saving Cam Tables	The cam table that is specified with the input parameter is saved in non-volatile memory in the CPU Unit.
	Parameters		Writing MC Settings	Some of the axis parameters or axes group parameters are overwritten temporarily.	
	Auxiliary Functions	Count Modes		You can select either Linear Mode (finite length) or Rotary Mode (infinite length).	
		Unit Conversions		You can set the display unit for each axis according to the machine.	
		Acceleration/Deceleration Control	Automatic Acceleration/Deceleration Control	Jerk is set for the acceleration/deceleration curve for an axis motion or axes group motion.	
			Changing the Acceleration and Deceleration Rates	You can change the acceleration or deceleration rate even during acceleration or deceleration.	
		In-position Check		You can set an in-position range and in-position check time to confirm when positioning is completed.	
		Stop Method		You can set the stop method to the immediate stop input signal or limit input signal.	
		Re-execution of Motion Control Instructions		You can change the input variables for a motion control instruction during execution and execute the instruction again to change the target values during operation.	
		Multi-execution of Motion Control Instructions (Buffer Mode)		You can specify when to start execution and how to connect the velocities between operations when another motion control instruction is executed during operation.	
		Continuous Axes Group Motions (Transition Mode)		You can specify the Transition Mode for multi-execution of instructions for axes group operation.	
		Monitoring Functions	Software Limits		The movement range of an axis is monitored.
			Following Error		The error between the command current value and the actual current value is monitored for an axis.
			Velocity, Acceleration Rate, Deceleration Rate, Torque, Interpolation Velocity, Interpolation Acceleration Rate, And Interpolation Deceleration Rate		You can set warning values for each axis and each axes group to monitor them.
Absolute Encoder Support		You can use an OMRON G5-Series Servomotor with an Absolute Encoder to eliminate the need to perform homing at startup.			
Input signal logic inversion *5		You can inverse the logic of immediate stop input signal, positive limit input signal, negative limit input signal, or home proximity input signal.			
External Interface Signals		The Servo Drive input signals listed on the right are used. Home signal, home proximity signal, positive limit signal, negative limit signal, immediate stop signal, and interrupt input signal			

*3 Supported only by the CPU Units with unit version 1.01 or later.

*5 Supported only by the CPU Units with unit version 1.05 or later.

	CJ-Series Units	Basic I/O Units	Maximum number of Units	40		
Chattering and Noise Countermeasures			Input response times are set.			
		Load Short-circuit Protection and I/O Disconnection Detection	Alarm information for Basic I/O Units is read.			
Communications	Peripheral USB Port		A port for communications with various kinds of Support Software running on a personal computer.			
	EtherNet/IP Port	Communications protocol		TCP/IP, UDP/IP		
		CIP Communications Service	Tag Data Links	Programless cyclic data exchange is performed with the devices on the EtherNet/IP network.		
			Message Communications	CIP commands are sent to or received from the devices on the EtherNet/IP network.		
		TCP/IP Applications	Socket Services		Data is sent to and received from any node on Ethernet using the UDP or TCP protocol. Socket communications instructions are used.	
			FTP Server		Files can be read from or written to the SD Memory Card in the CPU Unit from computers at other Ethernet nodes.	
			Automatic Clock Adjustment		Clock information is read from the NTP server at the specified time or at a specified interval after the power supply to the CPU Unit is turned ON. The internal clock time in the CPU Unit is updated with the read time.	
	SNMP Agent		Built-in EtherNet/IP port internal status information is provided to network management software that uses an SNMP manager.			
	EtherCAT Port	Supported Services	Process Data Communications	Control information is exchanged in cyclic communications between the EtherCAT master and slaves.		
			SDO Communications	Control information is exchanged in noncyclic event communications between the EtherCAT master and slaves. SDO communications that are defined in the CANopen standard are used.		
		Network Scanning		Information is read from connected slave devices and the slave configuration is automatically generated.		
		DC (Distributed Clock)		Time is synchronized by sharing the EtherCAT system time among all EtherCAT devices (including the master).		
		Packet Monitoring		The frames that are sent by the master and the frames that are received by the master can be saved. The data that is saved can be viewed with WireShark or other applications.	---	
		Enable/disable Settings for Slaves		The slaves can be enabled or disabled as communications targets.		
		Disconnecting/Connecting Slaves		Temporarily disconnects a slave from the EtherCAT network for maintenance, such as for replacement of the slave, and then connects the slave again.		
		Supported Application Protocol	CoE	SDO messages that conform to the CANopen standard can be sent to slaves via EtherCAT.		
	Communications Instructions		The following instructions are supported. CIP communications instructions, socket communications instructions, SDO message instructions, no-protocol communications instructions, and protocol macro instructions			
	Operation Management	RUN Output Contacts		The output on the NJ-P□3001 Power Supply Unit turns ON in RUN mode.

		Timing of Sampling		Sampling is performed for the specified task period, at the specified time, or when a sampling instruction is executed.	
		Triggered Traces	Trigger Conditions		When BOOL variable changes to TRUE or FALSE Comparison of non-BOOL variable with a constant Comparison Method: Equals (=), Greater than (>), Greater than or equals (≥), Less Than (<), Less than or equals (≤), Not equal (≠)
			Delay		Trigger position setting: A slider is used to set the percentage of sampling before and after the trigger condition is met.
		Simulation		The operation of the CPU Unit is emulated in the Sysmac Studio.	
Maintenance	Connections to HMIs	Connected Port	Built-in EtherNet/IP port		
	Sysmac Studio Connection	Connected Port	Peripheral USB port or built-in EtherNet/IP port		
Reliability Functions	Self-diagnosis	Controller Errors	Levels	Major fault, partial fault, minor fault, observation, and information	
		User-defined errors		User-defined errors are registered in advance and then records are created by executing instructions.	
Security	Protecting Software Assets and Preventing Operating Mistakes	CPU Unit Names and Serial IDs		When going online to a CPU Unit from the Sysmac Studio, the CPU Unit name in the project is compared to the name of the CPU Unit being connected to.	
		Protection	User Program Transfer with No Restoration Information		You can prevent reading data in the CPU Unit from the Sysmac Studio.
			CPU Unit Write Protection		You can prevent writing data to the CPU Unit from the Sysmac Studio or SD Memory Card.
			Overall Project File Protection		You can use passwords to protect .smc files from unauthorized opening on the Sysmac Studio.
			Data Protection		You can use passwords to protect POU's on the Sysmac Studio.*3
		Verification of Operation Authority		Online operations can be restricted by operation rights to prevent damage to equipment or injuries that may be caused by operating mistakes.	
		Number of Groups		5 *6	
Verification of User Program Execution ID		The user program cannot be executed without entering a user program execution ID from the Sysmac Studio for the specific hardware (CPU Unit).			

*1 Supported only by the CPU Units with unit version 1.03 or later.

*3 Supported only by the CPU Units with unit version 1.01 or later.

*6 When the NJ501 CPU Units with unit version 1.00 is used, this value becomes two.

Item		NJ501-□□□□	NJ301-□□□□	
SD Memory Card Functions	Storage Type	SD Memory Card (2 GB max.), SDHC Memory Card		
	Application	Automatic transfer from SD Memory Card *1	The data in the autoloader folder on an SD Memory Card is automatically loaded when the power supply to the Controller is turned ON.	
		SD Memory Card Operation Instructions	You can access SD Memory Cards from instructions in the user program.	
		File Operations from the Sysmac Studio	You can perform file operations for Controller files in the SD Memory Card and read/write standard document files on the computer.	
	SD Memory Card Life Expiration Detection	Notification of the expiration of the life of the SD Memory Card is provided in a system-defined variable and event log.		
Backup functions *1	SD Memory Card backup functions	Operation	Using front switch	You can use front switch to backup, compare, or restore data.
			Using system-defined variables	You can use system-defined variables to backup or compare data.
		Memory Card Operations Dialog Box on Sysmac Studio	Backup and verification operations can be performed from the SD Memory Card Operations Dialog Box on the Sysmac Studio.	
	Protection	Prohibiting backing up data to the SD Memory Card	Prohibit SD Memory Card backup functions.	
	Sysmac Studio Controller backup functions		Backup, restore, and verification operations for Units can be performed from the Sysmac Studio.	

*1 Supported only by the CPU Units with unit version 1.03 or later.

Function Specifications of DB Connection Function

Besides functions of the NJ501-□□□□, functions supported by the NJ501-1□20 are as follows.

Item	Description	
Supported port	Built-in EtherNet/IP port	
Supported DB	Microsoft Corporation: SQL Server 2008/2008 R2/2012 Oracle Corporation: Oracle Database 10g /11g	
Number of DB Connections (Number of databases that can be connected at the same time)	3 connections max. *1	
Instruction	Supported operations	The following operations can be performed by executing DB Connection Instructions in the NJ-series CPU Units. Inserting records (INSERT), Updating records (UPDATE), Retrieving records (SELECT), and Deleting records (DELETE)
	Number of columns in an INSERT operation	SQL Server: 1,024 columns max. Oracle: 1,000 columns max.
	Number of columns in an UPDATE operation	SQL Server: 1,024 columns max. Oracle: 1,000 columns max.
	Number of columns in a SELECT operation	SQL Server: 1,024 columns max. Oracle: 1,000 columns max.
Number of records in the output of a SELECT operation	65,535 elements max., 4 MB max.	
Run mode of the DB Connection Service	Operation Mode or Test Mode <ul style="list-style-type: none"> Operation Mode: When each instruction is executed, the service actually accesses the DB. Test Mode: When each instruction is executed, the service ends the instruction normally without accessing the DB actually. 	
Spool function	Used to store SQL statements when an error occurred and resend the statements when the communications are recovered from the error. Spool capacity: 1 MB *2	
Operation Log function	The following three types of logs can be recorded. <ul style="list-style-type: none"> Execution Log: Log for tracing the executions of the DB Connection Service. Debug Log: Detailed log for SQL statement executions of the DB Connection Service. SQL Execution Failure Log: Log for execution failures of SQL statements in the DB. 	
DB Connection Service shutdown function	Used to shut down the DB Connection Service after automatically saving the Operation Log files into the SD Memory Card.	

*1 When two or more DB Connections are established, the operation cannot be guaranteed if you set different database types for the connections.

*2 Refer to "NJ-series Database Connection CPU Units User's Manual(W527)" for the information.

* There is no NJ301-□□□□ CPU Unit with unit version 1.00. Therefore, you cannot use an NJ301-□□□□ CPU Unit with Sysmac Studio version 1.01 or lower.

Note: If you use a lower version of the Sysmac Studio, you can use only the functions of the unit version of the CPU Unit that corresponds to the Sysmac Studio version.

If you use a CPU Unit with an earlier version, select the unit version of the connected CPU Unit or an earlier unit version in the Select Device Area of the Project Properties Dialog Box on the Sysmac Studio. You can use only the functions that are supported by the unit version of the connected CPU Unit.

Sysmac Studio

Sysmac Studio for machine creators

The Sysmac Studio provides an integrated development environment to set up, program, debug, and maintain NJ-series Controllers and other Machine Automation Controllers, as well as EtherCAT slaves.

Features

- One software for motion, drives and vision
- Fully compliant with open standard IEC 61131-3
- Supports Ladder, Structured Text and Function Block programming with a rich instruction set
- CAM editor for easy programming of complex motion profiles
- One simulation tool for sequence and motion in a 3D environment
- Advanced security function with 32 digit security password

System Requirements

Item	Requirement
Operating system (OS) *1 *2	Windows XP (Service Pack 3 or higher, 32-bit version)/Vista(32-bit version)/7(32-bit/64-bit version)
CPU	Windows computers with Celeron 540 (1.8 GHz) or faster CPU. Core i5 M520 (2.4 GHz) or equivalent or faster recommended
Main memory *3	2 GB min.
Recommended video memory / video card for using 3D motion trace	Video memory: 512 MB min. Video card: Either of the following video cards: <ul style="list-style-type: none"> • NVIDIA® GeForce® 200 Series or higher • ATI RadeonHD5000 Series or higher
Hard disk	At least 1.6 GB of available space
Display	XGA 1024 x 768, 16 million colors. WXGA 1280 x 800 min. recommended
Disk drive	DVD-ROM drive
Communications ports	USB port corresponded to USB 2.0, or Ethernet port *4
Supported languages *5	Japanese, English, German, French, Italian, Spanish, simplified Chinese, traditional Chinese, Korean

*1. Sysmac Studio Operating System Precaution: System requirements and hard disk space may vary with the system environment.

*2. The following restrictions apply when Sysmac Studio is used with Microsoft Windows Vista or Windows 7.

1) Some Help files cannot be accessed.

The Help files can be accessed if the Help program distributed by Microsoft for Windows (WinHlp32.exe) is installed. Refer to the Microsoft homepage listed below or contact Microsoft for details on installing the file. (The download page is automatically displayed if the Help files are opened while the user is connected to the Internet.)

<http://support.microsoft.com/kb/917607/en-us>

2) The following restrictions apply to some application operations.

Application	Restriction
CX-Designer	If a new Windows Vista or Windows 7 font (e.g., Meiryo) is used in a project, the font size on labels may be bigger and protrude from the components if the project is transferred from CX-Designer running on a Windows XP or earlier OS to the NS/NSJ.
CX-Integrator/Network Configurator	Although you can install CPS files, EDS files, Expansion Modules, and Interface Modules, the virtual store function of Windows Vista or Windows 7 imposes the following restrictions on the use of the software after installation. <ul style="list-style-type: none"> • If another user logs in, the applications data will need to be installed again. • The CPS files will not be automatically updated. These restrictions will not exist if application data is installed using Run as Administrator.

*3. The amount of memory required varies with the Support Software used in Sysmac Studio for the following Support Software. Refer to user documentation for individual Support Software for details.

CX-Designer, CX-Protocol, and Network Configurator

*4. Refer to the hardware manual for your CPU unit for hardware connection methods and cables to connect the computer and CPU unit.

*5. Supported only by the Sysmac Studio version 1.01 or higher about German, French, Italian and Spanish.

Supported only by the Sysmac Studio version 1.02 or higher about simplified Chinese, traditional Chinese and Korean.

Common Function Specifications

	Item	Function	Applicable versions
Setting Parameters	EtherCAT Configuration and Setup	You can create a configuration in the Sysmac Studio of the EtherCAT slaves connected to the built-in EtherCAT port of the NJ-series CPU Unit and set the parameters for the EtherCAT masters and slaves.	All versions
	Registering slaves	You can set up devices by dragging slaves from the device list displayed in the Toolbox Pane to the locations where you want to connect them.	
	Setting master parameters	You set the common parameters of the EtherCAT network (e.g., the fail-soft operation and wait time for slave startup settings).	
	Setting slave parameters	You set the standard slave parameters and assign PDOs (process data objects).	
	Comparing and merging network configuration information	The EtherCAT network configuration information in the NJ-series CPU Unit and in the Sysmac Studio are compared and the differences are displayed.	
	Transferring the network configuration information	The EtherCAT network configuration information is transferred to the NJ-series CPU Unit. Or, the EtherCAT network configuration information in the NJ-series CPU Unit is transferred to the Sysmac Studio and displayed in the EtherCAT Editor.	
	Installing ESI files	ESI (EtherCAT slave information) files are installed.	
	EtherCAT Slave Terminal Configuration and Setup	The configuration of any Slave Terminal that is connected to an EtherCAT network is created on the Sysmac Studio. The NX Units that compose the Slave Terminal are set in the configuration.	Ver. 1.06 or higher
	Registering NX Units	A Slave Terminal is built by dragging NX Units from the device list displayed in the Toolbox to the locations where you want to mount them.	
	Setting NX Units	The I/O allocations, mounting settings, and Unit operation settings of the NX Units are edited.	
	Displaying the width of a Slave Terminal configuration	The width and power consumption of a Slave Terminal are displayed based on the Unit configuration information.	
	Comparing and merging the Slave Terminal configuration information	When online, you can compare the configuration information in the project with the physical configuration. You can also select the missing Units and add them to the project.	
	Transferring the Slave Terminal configuration information	The Unit configuration information is transferred to the CPU Unit.	
	CPU/Expansion Rack Configuration and Setup	You create the configuration in the Sysmac Studio of the Units mounted in the NJ-series CPU Rack and Expansion Racks and the Special Units.	All versions
	Registering Units	A Rack is built by dragging Units from the device list displayed in the Toolbox Pane to the locations where you want to mount them.	
	Creating Racks	An Expansion Rack (Power Supply Unit, I/O Interface Unit, and End Cover) is added.	
	Switching Unit displays	The model number, unit number, and slot number are displayed.	
	Setting Special Units	The input time constants are set for Input Units and parameters are set for Special Units.	
	Displaying Rack widths, current consumption, and power consumption	The Rack widths, current consumption, and power consumption are displayed based on the Unit configuration information.	
	Comparing the CPU/Expansion Rack configuration information with the physical configuration	When online, you can compare the configuration information in the project with the physical configuration. You can also select the missing Units and add them.	
	Transferring the CPU/Expansion Rack configuration information	The Unit configuration information is transferred to the CPU Unit. The synchronize function is used.	
	Printing the Unit configuration information	The Unit configuration information is printed.	
	Controller Setup	The Controller Setup is used to change settings related to the operation of the Controller. The Controller Setup contains PLC Function Module operation settings and built-in EtherNet/IP Function Module port settings.	All versions
	Operation Settings	The Startup Mode, SD Memory Card diagnosis at Startup, Write Protection at Startup, Controller Error Level Changes *1, and other settings are made.	
	Transferring Operation Settings	Use the synchronize operation to transfer the operation settings to the NJ-series CPU unit.	
	Built-in EtherNet/IP Port Settings	These settings are made to perform communications using the built-in EtherNet/IP port of the NJ-series CPU unit.	
	Transferring Built-in EtherNet/IP Port Settings	Use the synchronize operation to transfer the Built-in EtherNet/IP Port Settings to the NJ-series CPU unit.	
	Motion Control Setup	The Motion Control Setup is used to create the axes to use in motion control instructions, assign those axes to Servo Drives and encoders, and set axis parameters.	All versions
	Axis Settings	Axes are added to the project.	
	Axis Setting Table	The Axis Setting Table is a table of all registered axis parameters. You can edit any axis parameters here just as you can on the Axis Settings Tab Page.	
Axes Group Settings	You can set up axes to perform interpolated motions as an axes group.	All versions	
Axes Group Basic Settings	Set the axes group number, whether to use the axes group, the composition, and the composition axes.		
Operation Settings	Set the interpolated velocity, the maximum interpolated acceleration and deceleration, and the interpolated operation settings.		

*1. Changing event levels for Controller errors is supported by version 1.04 or higher.

Item		Function	Applicable versions
Setting Parameters	Cam Data Settings	The Cam Data Settings are used to create electronic cam data. When you build the project for the Controller, a cam table is created according to the Cam Data Settings.	All versions
	Registering cam data settings	Cam data settings is added to the project.	
	Editing cam data settings	You can set properties and node points for cam data settings.	
	Transferring cam data settings	You can select to transfer all or part of the cam data.	
	Importing cam data settings	You can import cam data settings from a CSV file.	
	Exporting cam data settings	You can export cam data to a CSV file.	
	Exporting cam tables	You can export a cam table to a CSV file.	
	Transferring cam tables from the Controller to files	You can save a cam table in the NJ-series CPU unit to a CSV file.	
	Transferring cam tables from files to the Controller	You can transfer a cam table that is saved in a CSV file to update the contents of a cam table that is already in the NJ-series CPU unit.	
	Superimposing Cam Table	You can superimpose the cam table from a CSV file on the cam profile curve position graph that is currently displayed.	
	Task Setup	Programs are executed in tasks in an NJ-series CPU Unit. The Task Settings define the execution period, the execution timing, the programs executed by the task, the I/O refreshing performed by the task, and which variables to share between tasks.	All versions
	Registering tasks	The tasks, which are used to execute programs, are registered.	
	Setting task I/O	The task I/O settings define what Units the task should perform I/O refreshing for.	
	Assigning programs	Program assignments define what programs a task will execute.	
	Setting exclusive control of variables in tasks	You can specify if a task can write to its own values (known as a refreshing task) or if it can only access them (an accessing task) for global variables. This ensures concurrency for global variable values from all tasks that reference them.	
	I/O Map Settings	The I/O ports that correspond to the registered EtherCAT slaves and to the registered Units on the CPU Rack and Expansion Racks are displayed. The I/O Map is edited to assign variables to I/O ports. The variables are used in the user program.	All versions
	Displaying I/O ports	I/O ports are displayed based on the configuration information of the devices (slaves and Units).	
	Assigning variables	Variables are assigned to I/O ports.	
	Creating device variables	Device variables are created in the I/O Map. You can either automatically create a device variable or manually enter the device variable to create.	
	Checking I/O assignments	The assignments of external I/O devices and variables are checked.	
Vision Sensor Settings	You can set and calibrate Vision Sensors. Refer to " Function Specifications of Vision Sensor Functions ".	Ver.1.01 or higher	
Displacement Sensor Settings	You can set and calibrate Displacement Sensors. Refer to " Function Specifications of Displacement Sensor Functions ".	Ver.1.05 or higher	
DB Connection Function Settings	You can set and transfer the DB connection function settings. Refer to " Function Specifications of DB Connection Function ".	Ver. 1.06 or higher with the NJ501-1□20 selected	
Programming	Instruction list (Toolbox)	A hierarchy of the instructions that you can use is displayed in the Toolbox. You can drag the required instruction to a program in the Ladder Editor to insert the instruction.	All versions
	Programming ladder diagrams	Ladder diagram programming involves connecting rung components with connecting lines to build algorithms. Rung components and connecting lines are entered in the Ladder Editor.	All versions
	Starting the Ladder Editor	The Ladder Editor for the program is started.	
	Adding and deleting sections	You can divide your ladder diagrams into smaller units for easier management. These units of division are called sections.	
	Inserting rung components	You insert rung components in the Ladder Editor to create an algorithm.	
	Inserting and deleting function blocks	You can insert a function block instruction or user-defined function block into the Ladder Editor.	
	Inserting and deleting functions	You can insert a function instruction or user-defined function into the Ladder Editor.	
	Inserting and deleting inline ST	You can insert a rung component in a ladder diagram to enable programming in ST. This allows you to include ST in a ladder diagram.	
	Editing rung components	You can copy and past rung components.	
	Inserting and deleting jump labels and jumps	You can insert a jump label in the rung to jump to and then specify that jump label when you insert a jump.	
	Inserting and deleting bookmarks	You can add bookmarks to the beginning of rungs and move between them.	
	Rung comments	You can add comments to rungs.	
	Displaying rung errors	When you enter a rung component, the format is always checked and any mistakes are displayed as errors. If there are any errors, a red line is displayed between the rung number and the left bus bar.	
	Entry assistance	When you enter instructions or parameters, each character that you enter from the keyboard narrows the list of candidates that is displayed for selection.	
Displaying variable comments *2	A specified variable comment can be displayed with each variable of rung components on the ladder diagrams. You can change the length of the displayed variable comments to make them easier to read. *3	Ver.1.01 or higher	

*2. Displaying comments for members of arrays, structures, and unions and displaying long comments for variables (up to five lines) are supported by version 1.04 or higher.

*3. Changing the length of the displayed variable comments is supported by version 1.05 or higher.

Item		Function	Applicable versions
Programming	Programming structured text		You combine different ST statements to build algorithms.
		Starting the ST Editor	The ST Editor for programs or for functions/function blocks is started.
		Editing ST	You combine different ST statements to build algorithms.
		Entering calls to functions and function blocks	You can enter the first character of the instance name of the function or the function block in the ST Editor to call and enter a function or function block.
		Entering constants	You can enter constants in the ST Editor.
		Entering comments	Enter "*" at the beginning and "*" at the end of any text to be treated as a comment in the ST Editor. If you only want to comment out a single line, enter a double forward slash (/) at the beginning of the line.
		Copying, pasting, and deleting ST elements	You can copy, paste, and delete text strings.
		Indenting	You can indent nested statements to make them easier to read.
		Moving to a specified line	You can specify a line number to jump directly to that line.
		Bookmarks	You can add bookmarks to any lines and move between them.
		Entry assistance	When you enter instructions or parameters, each character that you enter from the keyboard narrows the list of candidates that is displayed for selection.
		Variable Manager	A list of the variables in the global and local variable tables is displayed in a separate window. You can display variable usage, sort and filter the variables, edit and delete variables, or move variables while displaying another editing view.
		Changing variable comments and data type comments	You can globally change variable comments and data type comments to other comments. You can change the comments to different language for users in a different country.
		Searching and replacing	You can search for and replace strings in the data of a project.
	Retrace searching	You can search for the program inputs and the input parameters to functions or function blocks that use the selected variable if the selected variable is used as a program output or as the output parameter of a function or function block. Also, you can search for the program outputs and the output parameters to functions or function blocks that use the selected variable if the selected variable is used as a program input or as the input parameter of a function or function block.	
	Jumping	You can jump to the specified rung number or line number in the program.	
	Building	Building	The programs in the project are converted into a format that is executable in the NJ-series CPU unit.
		Rebuilding	A rebuild is used to build project programs that have already been built.
		Aborting a build operation	You can abort a build operation.
Reuse Functions	Library		You can create functions, function block definitions, programs *4, and data types in a library file to use them as objects in other projects.
		Creating libraries	You can create library files to enable using functions, function block definitions, and data types in other projects.
		Using libraries	You can access and reuse objects from library files that were created in other projects.
File Operations	File operations	Creating a project file	A project file is created.
		Opening a project file	A project file is opened.
		Saving the project file	The project file is saved.
		Saving a project file under a different name	A project file is saved under a different name.
		Project update history management	You can assign numbers to projects to manage the project history.
		Exporting a project file	You can export a project to an .smc2 or .csm2 project file *7. You can also export a project to a previous project file format, i.e., .smc or .csm.*3.
		Importing a project file	You can import a project from an .smc2 *7 .csm2 *7, .smc, or .csm*5 project file.
		Importing a ST project file	Import of ST program files created by the Simulink® PLC Coder™ (version R2013a or higher) from MathWorks® Inc.
		Offline comparison	You can compare the data for an open project with the data for a project file and display the results. You can also compare the open project with an exported .smc2 *7 or .smc project file. Or, you can merge detailed comparison results. *6
		Cutting, copying, and pasting	You can cut, copy, or paste items that are selected in the Multiview Explorer or any of the editors.
	Synchronize	The project file in the computer is compared with the data in the online NJ-series CPU Unit and any differences are displayed. You can specify the transfer direction for any type of data and transfer all of the data.	
	Printing	You can print various data. You can select the items to print.	
	Clear All Memory	The Clear All Memory Menu command is used to initialize the user program, Controller Configurations and Setup, and variables in the CPU Unit to the defaults from the Sysmac Studio.	

*4. Creating programs in a library file is supported by version 1.06 or higher.

*5. The .csm format is supported by version 1.04 or higher. The size of a csm file is smaller than the size of the smc file.

*6. Merging detailed comparison results is supported by version 1.03 or higher.

*7. Supported only by the Sysmac Studio version 1.08 or higher.

Item		Function	Applicable versions
File Operations	SD Memory Cards	The following procedures are used to execute file operations for the SD Memory Card mounted in the NJ-series CPU unit and to copy files between the SD Memory Card and computer.	All versions
	Formatting the SD Memory Card	The SD Memory Card is formatted.	
	Displaying properties	The properties of the selected file or folder in the SD Memory Card are displayed.	
	Copying files and folders in the SD Memory Card	The selected file or folder in the SD Memory Card is copied to the SD Memory Card.	
	Copying files and folders between the SD Memory Card and the computer	The selected file or folder in the SD Memory Card is copied to the computer. Or, the selected file or folder in the computer is copied to the SD Memory Card.	
Debugging	Monitoring	Variables are monitored during ladder program execution. You can monitor the TRUE/FALSE status of inputs and outputs and the present values of variables in the NJ-series CPU unit. You can monitor operation on the Ladder Editor, ST Editor, Watch Tab Page, or I/O Map.	Ver.1.04 or higher
	Differential monitoring	You can detect the number of times the specified BOOL variable or BOOL member changes to TRUE or FALSE and display the count in the Differential Monitor Window. You can check if bits turn ON and OFF and the number of times that they turn ON and OFF.	
	Changing present values and TRUE/FALSE	You can change the values of variables that are used in the user program and settings to any desired value, and you can change program inputs and outputs to TRUE or FALSE. This allows you to check the operation of the user program and settings.	
	Changing the present values of variables *8	You can change the present values of user-defined variables, system-defined variables, and device variables as required. You can do this in the Ladder Editor, ST Editor, Watch Tab Page or I/O Map.	All versions
	Forced refreshing	Forced refreshing allows the user to refresh external inputs and outputs with user-specified values from the Sysmac Studio. The specified value is retained even if the value of the variable is overwritten from the user program. You can use forced refreshing to force BOOL variables to TRUE or FALSE in the Ladder Editor, Watch Tab Page, or I/O Map.	
	Online editing	Online editing allows you to edit programs on systems that are currently in operation. Online editing can be used to edit only POUs and global variables. User-defined data types cannot be edited with online editing.	
	Cross Reference Tab Page	Cross references allow you to see the programs and locations where program elements (variables, data types, I/O ports, functions, or function blocks) are used. You can view all locations where an element is used from this list.	
	Data tracing	Data tracing allows you to sample the specified variables and store the values of the variables in trace memory without any programming. You can choose between two continuous trace methods: a triggered trace, where you set a trigger condition and data is saved before and after that condition is met, or a continuous trace, in which continuous sampling is performed without any trigger and the results are stored in a file on your computer. However, you can still display data retrieved on the Sysmac Studio and save those results to a file even if you use a triggered trace. These same functions can be used with the Simulator as well.	
	Setting sampling intervals	The interval to perform sampling on the target data is set. Sampling is performed for the specified task period, at the specified time, or when a trace sampling instruction is executed.	
	Setting triggers	To perform a triggered trace, you set a condition to trigger sampling. A suitable trigger condition is set to record data before and after an event.	
	Setting a continuous trace	The method to save the data traced during a continuous trace is set.	
	Setting variables to sample	The variables to store in trace memory are registered. The sampling intervals can also be set.	
	Starting and stopping tracing	The data trace settings are transferred to the NJ-series CPU unit and the tracing starts. If you selected <i>Trigger (Single)</i> as the trace type, tracing waits for the trigger to begin sampling. If you selected <i>Continuous</i> , sampling begins immediately and all traced data is transferred to the computer as it is gathered and saved to a file.	
	Displaying trace results	You view the results of the traced data in either a chart or in 3D Motion Trace Display Mode. After sampling begins, sample data is immediately transferred and drawn on the graph. The trace target variable table shows the maximum, minimum, and average values for each variable. You can change the line colors on the graph. *9 You can consecutively read and display continuous trace results from more than one file. *10	
Exporting/ Importing trace results	Trace results are saved within your project automatically when you save the project on the Sysmac Studio. If you want to save this data as a separate file, you can export the data to a CSV file. You can import trace results that you have exported.		
Printing trace results	You can print out data trace settings along with digital and analog charts.	Ver.1.01 or higher	
Debugging Vision Sensors	You can debug the Vision Sensor offline. Refer to " Function Specifications of Vision Sensor Functions ".		
Debugging Displacement Sensors	You can debug Displacement Sensors offline. Refer to " Function Specifications of Displacement Sensor Functions ".	Ver.1.05 or higher	

*8. Changing present values in the Ladder Editor or ST Editor is supported by version 1.03 or higher.

*9. Changing the colors of graph lines is supported by version 1.01 or higher.

*10. Consecutively reading and displaying continuous trace results from more than one file is supported by version 1.05 or higher.

Item		Function	Applicable versions		
Simulation	Programs for debugging		All versions		
	Executing a simulation	Selecting what to simulate		You can select the programs to simulate from all of the programs in the Sysmac Studio. Programs can be dragged to select them.	
		Setting breakpoints		You can set breakpoints to stop the simulation in the Program Editor.	
		Executing and stopping simulations		You can control simulation execution to monitor the user program or to check operation through data tracing. Step execution and pausing are also possible.	
		Changing the simulation speed		You can change the execution speed.	
		Task period simulation		You can display the task periods.	
		Batch transfer of the present values of variables		You can save the values of variables at specific times during simulations in a file, or you can write the values of variables that were saved in a file back to the Simulator. This allows you to write the initial values of variables, e.g., for test applications, before you start a simulation.	
		Integrated NS-series PT simulation *11		You can simulate the linked operation of a sequence program and an NS-series Programmable Terminal to debug the sequence program and screen data offline.	
	Setting the virtual equipment	Creating 3D device models		You can create a 3D device model at the control target to monitor with the 3D motion trace function.	All versions
		Displaying 3D motion traces		You set the axis variables for each element of the 3D device model, and then set the 3D device into motion according to those axis motions.	
Displaying 2D paths		You can display the 2D paths of the markers for the projections in the 3D display.			
Monitoring Information	Displaying unit production information		All versions		
	Monitoring task execution times				
	Troubleshooting	Troubleshooting		All versions	
		Controller errors	Any current Controller errors are displayed. (Observations and information are not displayed.)		
		User-defined errors	Information is displayed on current errors.		
		Controller event log	You can display a log of Controller events (including Controller errors and Controller information). (You cannot display logs from EtherCAT slaves.)		
		User-defined event log	The log of user-defined events that were stored for the Create User-defined Error (SetAlarm) instruction and the Create User-defined Information (SetInfo) instruction is displayed.		
	Event Settings Table	The Event Setting Table is used to register the contents displayed on the Sysmac Studio and on HMI for User-defined events that occur for execution of the Create User-defined Error (SetAlarm) instruction and the Create User-defined Information (SetInfo) instruction.			
	User memory usage monitor	An estimate of the space that is used by the user program that you are editing in the Sysmac Studio is displayed in relation to the size of the Controller's memory.	All versions		
	Setting clock information	You can read and set the NJ-series CPU unit's clock. The computer's clock information is also displayed.			
DB connection function	You can monitor information for the DB connection. Refer to " Function Specifications of DB Connection Function ".				
Communications	Going online with a Controller		All versions		
	Checking for forced refreshing				
Maintenance	Changing the operating mode of the Controller		All versions		
	Resetting the Controller				
	Backup functions	Backup functions			
		Variables and memory backup		You can back up the contents of retained memory to a file and restore the contents of the backup file. You can individually select the retained variables to restore. *12	
		Controller backup		You can back up data (user program and settings, variable values, memory values, Unit settings, and slave settings) from a Controller to a file and restore the backed up data from the file to the Controller.	
		SD Memory Card backup		You can back up the data in the NJ-series CPU unit to an SD Memory Card mounted in the Controller or compare the data in the NJ-series Controller to data in the SD Memory Card.	
Importing/exporting to/from backup files	You can import the data in a backup file created for a Controller backup or SD Memory Card backup to a project. Also, you can export project data to a backup file.	Ver.1.04 or higher			

*7. Supported only by the Sysmac Studio version 1.08 or higher.

*11.CX-Designer version 3.41 or higher is required.

*12.Individual selection of the retained variables to restore is supported by version 1.05 or higher.

Item		Function	Applicable versions
Security Measures	Prevention of incorrect connections	Confirming NJ-series CPU unit names and serial IDs If the name or the serial ID is different between the project and the NJ-series CPU unit when an online connection is established, a confirmation dialog box is displayed.	All versions
	Prevention of incorrect operation	Operation authority verification You can set five operation authorities (Administrator, Planning Engineer, Maintainer, Operator, and Observer) to restrict the operations that can be performed according to the operation authority of the user.	
		Write protection of the CPU Unit You can prevent rewriting of data in the CPU Unit from the Sysmac Studio.	
	Prevention of the theft of assets	Authentication of user program execution IDs You can ensure that a user program cannot be operated on another CPU Unit even if copied.	
		User program transfer with no restoration information The program source code is not transferred. If this option is selected, programs are not displayed even if uploaded from another computer. However, variables and settings are transferred even if this option is selected.	
		Password protection for project files You can place a password on the file to protect your assets.	
	Data protection You can set passwords for individual POU's (programs, functions, and function block definitions) to prohibit displaying, changing, and copying them.	Ver.1.02 or higher	
Online Help	Sysmac Studio help system You can access Sysmac Studio operating procedures.		All versions
	Instructions reference Information is provided on how to use the instructions that are supported by the NJ-series CPU Units.		
	System-defined variable reference You can display a list of descriptions of the system-defined variables that you can use on the Sysmac Studio.		
	Keyboard mapping reference You can display a list of convenient shortcut keys that you can use on the Sysmac Studio.		

Function Specifications of DB Connection Function

Item		Function
Setting parameters		-
	DBMS settings	The database to connect is selected.
	Run mode setting of the DB connection service	The Operation Mode is selected to send SQL statements when DB connection instructions are executed or Test Mode is selected to not send SQL statements when DB connection instructions are executed.
	Spooling settings	You can set the service so that SQL statements are spooled when problems occur and resent when operation is restored.
	Operation log settings	Settings are made for the execution log for execution of the DB connection service, the debug log for execution of SQL statements for the DB connection service, and the SQL execution failure log for SQL execution failures.
	Database connection service shutdown settings	Settings are made to control operation in order to end the DB connection service after automatically storing the operation log files on an SD Memory Card.
Programming	DB connection instructions	You can use the following DB connection instructions to write the user program for controlling the data in the database. DB_Insert (Insert DB Record), DB_Select (Retrieve DB Record), DB_Update (Update DB Record), and DB_Delete (Delete DB Record)
Monitoring information		-
	Monitoring the DB connection service	The status of the DB connection service is monitored.
	Monitoring the DB connections	The status of each DB connection is monitored.
	Displaying the operation logs	The contents of the execution log, debug log, and SQL execution failure log are displayed.

Note: The DB connection service can be used if the NJ501-1□20 is selected with Sysmac Studio version 1.06 or higher.

Function Specifications of Safety Control Units

Item		Function
Setting Parameters	Safety I/O Settings	
		You make a setting for safety process data communications and connection with safety I/O devices.
	Safety Process Data Communications Settings	You select Safety I/O Units to perform safety process data communications (FSoE communications) and make necessary settings.
	Safety Device Allocation Settings	You set the connection between Safety I/O Units and safety devices.
	Slave I/O Settings	Exposed Variable Settings You set whether to expose global variables of the Safety CPU Unit. The values of exposed variables can be referenced from NJ-series CPU Units.
	Safety Task Settings	Assigning Programs You define the execution cycle and timing of the safety task and programs to be executed in the task. You assign safety programs to execute to the task.
	I/O Map Settings	The ports of Safety I/O Units used in safety process data communications are displayed. You assign device variables used in safety programs to the I/O ports.
Creating Safety Programs	Instruction List (Toolbox)	
		A hierarchy of the functions and function blocks that you can use is displayed in the Toolbox. You can drag the required functions and function blocks onto the FBD editor to insert it to a safety program.
	FBD Programming	
	Adding FBD Networks	You create FBD networks on the FBD editor to create algorithms.
	Inserting and Deleting Functions and Function blocks	You insert and delete functions and function blocks on the FBD editor.
	Entry Assistance	When you enter functions, function blocks, or parameters, each character that you enter from the keyboard narrows the list of candidates that is displayed for selection.
	Commenting Out FBD Networks	You can comment out each FBD network. When a network is commented out, it is no longer executed.
Creating Safety Programs	Creating Variables	
		You create variables used in safety programs in the global or local variable table.
	Creating Function Blocks	
	You create user-defined function blocks.	
	Searching and Replacing	
		You can search for and replace strings in the variable tables, programs, and function blocks of a Safety CPU Unit.
Debugging	Monitoring	
		Variables are monitored during safety program execution. You can monitor the present values of device variables assigned to Safety I/O Units and user-defined variables. The values can be monitored on the FBD editor or Watch Tab Page.
	Changing the Present Values of Variables	
		You can change the present values of user-defined variables and device variables as required. You can do this on the FBD editor or Watch Tab Page.
	Forced Refreshing	
		The inputs from external devices and outputs to external devices are refreshed with a specified value on the Sysmac Studio. The specified value is retained even if the value of the variable is overwritten from the user program. You can use forced refreshing on the FBD editor or Watch Tab Page.
	Offline Debugging	
		You can check if the control program logic works as designed in advance using a special debugging function for the Simulator without connecting online with the Safety CPU Unit.
Safety	Safety Validation	
		You append the "safety-validated" information to a safety program when you can ensure safety of the program after you complete debugging.
	Changing Operating Mode	
		There are four operating modes; PROGRAM mode, DEBUG mode (STOPPED), DEBUG mode (RUN), and RUN mode. The RUN mode can be selected only for the validated safety programs.
Security Measures	Prevention of Incorrect Connections	Setting the Node Name
		You set a unique name for each Safety CPU Unit to confirm that you operate the correct Safety CPU Unit.
	Prevention of Incorrect Operation	Safety Password
		You can prevent unauthorized access to safety functions of Safety CPU Units by setting a safety password for online operations that affect the safety functions.

Note: Supported only by the Sysmac Studio version 1.07 or higher.

Function Specifications of Vision Sensor Functions

FQ-M-series Vision Sensors

Item		Function
Setting Parameters		—
Main Edit	General Settings	Displays and sets basic information of the sensor.
	Sensor connection	Changes the connection status of the Sensor, and sets the conditions for communications with the Sensor.
	Sensor control in online	Performs various controls for the sensor mode change, data transfer/save, and monitoring.
	Sensor error history	Displays and clears the error history of an online Sensor.
Scene data Edit	Tool	Restarts and initializes the sensor, updates the firmware of the sensor, reads sensor data from a file, saves sensor data to a file, prints the sensor parameters, and displays help.
	Image condition Settings	Adjusts the image condition.
	Specifies the calibration pattern	Sets a registered calibration pattern.
	Registers inspection item	Registers the inspection item to use in the measurement. You can select from the following inspection items: Edge position, Search, Labeling, Shape search
	Calculation Settings	Makes a setting for basic arithmetic operations and function operations using inspection item judgment results and measurement data.
	Logging Settings	Makes a setting for logging measurement results of inspection items and calculation results.
	Output Settings	Makes a setting for data to output to external devices.
Sensor system data Edit	Run Settings	Switch Sensor modes or monitors measurement results.
	Trigger condition Settings	Sets the trigger type and image timing.
	I/O Settings	Sets the conditions of output signals. You can check the status of I/O signal while online.
	Encoder Settings	Make settings for the encoder such as common encoder settings, ring counter settings, and encoder trigger settings.
	Ethernet communication Settings	Makes Ethernet communication settings. You can select data communication from no-protocol data, PLC link data, and programmable no-protocol data.
	EtherCAT communication Settings	Makes the EtherCAT communication settings according to the communication settings of the EtherCAT master.
	Logging condition Settings	Sets the conditions to log to the internal memory of sensor.
Sensor Settings	Makes the settings for startup scene control function, password setting function, and adjustment judgment function.	
Calibration Scene Data Settings		Calculates, views, and edits the calibration parameters. The Vision Sensor supports general-purpose calibration and calibration for conveyor tracking.
Debugging	Offline debugging of sensor operation	Simulates measurements offline without connecting to the Vision Sensor. You can use external image files and perform measurements under the conditions set in the offline settings, then display the results of those measurements.
	Offline debugging of the sensor control program and sensor operation	Performs a linked simulation between the sequence control of an NJ-series Controller and the operation of an FQ-M Sensor in EtherCAT configuration systems. This allows you to debug operation offline from when measurements and other processing are performed for control signals such as measurement triggers through the output of processing results.

Note: Supported only by the Sysmac Studio version 1.01 or higher.

FH-series Vision Sensors

Item		Function
Setting Parameters		—
Main Edit	Sensor Information	Displays and sets basic information of the sensor.
	Online	Changes the connection status of the sensor, and performs various controls such as sensor restart and initialization.
Line Edit	Operation View	Monitors the measurement images of the sensor and detailed results of each process unit.
	Scene Maintenance View	Edits, manages, and saves the scene groups and scenes.
Scene Data Edit	Flow Edit	Creates the process flow in combination of user-specified units.
	Process Unit Edit	Edits each process unit.
Sensor System Data Edit	Camera Settings	Checks the camera connection status and sets the camera's imaging timing and communications speed.
	Controller Settings	Makes the system environment settings for the sensor.
	Parallel I/O Settings	Sets the conditions of output signals.
	RS-232C/422 Settings	Makes the RS-232C/422 communications settings.
	Ethernet Communication Settings	Makes the Ethernet communication settings.
	EtherNet/IP Communication Settings	Makes the EtherNet/IP communications settings.
	EtherCAT Communication Settings	Makes the EtherCAT communications settings.
	Encoder Settings	Makes the encoder settings.
Tools	Communication Command Customization Tool	Makes the settings for customized communication commands.
	File Saving Tool	Copies and transfers the files in the sensor memory.
	Calibration Support Tool	Checks the calibration information.
	User Data Tool	Edits the data (user data) that can be shared and used in sensors.
Debugging	Offline Debugging of Sensor Operation	Simulates measurements offline without connecting to the sensor. You can use external image files and perform measurements under the conditions set in the offline settings, then display the results of those measurements.
	Offline Debugging of Sensor Control Program and Sensor Operation *	Simulates the linked operation of the sequence controls in the NJ-series Controller and FH-series Sensor operation for an EtherCAT system. You can debug a series of operations offline to perform the measurement and other processing and output the results when a control signal such as measurement trigger is input to the Sensor.

Note: Supported only by the Sysmac Studio version 1.07 or higher.

* Supported only by the Sysmac Studio version 1.08 or higher.

Features

- Up to 63 NX-IO Units can be connected to one EtherCAT Coupler Unit. Standard and high-performance units can be mixed. *
- Each Coupler plus its I/O form just a single EtherCAT node on the network.
- I/O control and safety control can be integrated by connecting Units for safety.
- The Coupler supports the EtherCAT Distributed Clock (DC) and propagates this to synchronous I/O units.
- The node address can be fixed by rotary switches, or set by software. Choose the method that best suits your way of engineering.
- Slave configuration by Sysmac Studio can be done centrally via the controller, or on-the-spot using the Coupler's built-in USB port.

* Input per Coupler Unit: Maximum 1024 bytes, Output per Coupler Unit: Maximum 1024 bytes

Power Supply System and Design Concepts

Designing the NX Unit Power Supply System

For designing the NX Unit power supply of the EtherCAT Slave Terminal, refer to EtherCAT Coupler Unit USER'S MANUAL (Cat. W519).

Designing the I/O Power Supply System

For designing the NX Unit power supply of the EtherCAT Slave Terminal, refer to EtherCAT Coupler Unit USER'S MANUAL (Cat. W519).

Components and Functions

Symbol	Name	Function
(A)	NX bus connector	This connector is used to connect each Unit.
(B)	Indicators	The indicators show the current operating status of the Unit.
(C)	Communications connectors	These connectors are connected to the communications cables of the EtherCAT network. There are two connectors, one for the input port and one for the output port.
(D)	Peripheral USB port	This port is used to connect to the Sysmac Studio Support Software.
(E)	Terminal block	The terminal block is used to connect external devices. The number of terminals depends on the type of Unit.
(F)	Rotary switches	These rotary switches are used to set the 1s digit and 10s digit of the node address of the EtherCAT Coupler Unit as an EtherCAT slave. The address is set in decimal.
(G)	DIP switch	The DIP switch is used to set the 100s digit of the node address of the EtherCAT Coupler Unit as an EtherCAT slave.

(C)	Terminal block	The terminal block is used to connect external devices. The number of terminals depends on the type of Unit.

Terminal Blocks

Symbol	Name	Function
(A)	Terminal number indications	Terminal numbers for which A to D indicate the column, and 1 to 8 indicate the line are displayed. The terminal number is a combination of column and line, so A1 to A8 and B1 to B8 are displayed. For models of 12-terminal type x 2 and 16-terminal type x 2, A1 to A8 and B1 to B8 are terminal number of the left terminal block, C1 to C8 and D1 to D8 are terminal numbers of the right terminal block. The terminal number indications are the same regardless of the number of terminals on the terminal block.
(B)	Release holes	Insert a flat-blade screwdriver into these holes to connect and remove the wires.
(C)	Terminal holes	The wires are inserted into these holes.

The following Terminal Blocks can be purchased individually.

Model	No. of terminals	Terminal number indications	Ground terminal mark	Terminal current capacity

Note: Refer to the user's manual of each Unit for the applicable Terminal Blocks.

Applicable Wires

Using Ferrules

If you use ferrules, attach the twisted wires to them.

Observe the application instructions for your ferrules for the wire stripping length when attaching ferrules.

Always use one-pin ferrules. Do not use two-pin ferrules.

The applicable ferrules, wires, and crimping tool are given in the following table.

* Some AWG 14 wires exceed 2.0 mm² and cannot be used in the screwless clamping terminal block.

When you use any ferrules other than those in the above table, crimp them to the twisted wires so that the following processed dimensions are achieved.

Finished Dimensions of Ferrules

1.6 mm max. (except ground terminals)

2.0 mm max. (ground terminals)

2.4 mm max. (except ground terminals)

2.7 mm max. (ground terminals)

Using Twisted Wires/Solid Wires

If you use the twisted wires or the solid wires, the applicable wire range and conductor length (stripping length) are as follows.

Terminal types	Applicable wires	Conductor length (stripping length)
Ground terminals	2.0 mm ²	9 to 10 mm
Terminals other than ground terminals	0.08 to 1.5 mm ² AWG28 to 16	8 to 10 mm

Mounting Dimensions

Installation Height

The installation height of the EtherCAT Slave Terminal depends on the model of DIN Track and on the models of NX Units that are mounted. Also, additional space is required for the cables that are connected to the Unit. Allow sufficient depth in the control panel and allow extra space when you mount the EtherCAT Slave Terminal. The following figure shows the dimensions from the cables connected to the EtherCAT Coupler Unit to the back of the Unit.

- *1 This dimension depends on the specifications of the commercially available USB cable. Check the specifications of the USB cable that is used.
- *2 Dimension from Back of Unit to Communications Cables
 - 100 mm: When an MPS588-C Connector is used.
 - 120 mm: When an XS6G-T421-1 Connector is used.

W: Width of EtherCAT Slave Terminal

NX-series EtherCAT Coupler Unit

NX-ECC

Combine flexibility in Remote I/O configuration with the speed and determinism of EtherCAT.

- The EtherCAT Coupler Unit is the link between the EtherCAT Machine Control network and the NX-series I/O Units. With I/O Units ranging from basic I/O's to high-speed synchronous models, the NX-series is the perfect match for the Sysmac Machine Automation Controllers.

Features

- Up to 63 NX-IO Units can be connected to one EtherCAT Coupler Unit. Standard and high-performance units can be mixed.*
- Each Coupler plus its I/O form just a single EtherCAT node on the network.
- I/O control and safety control can be integrated by connecting Units for safety.
- The Coupler supports the EtherCAT Distributed Clock (DC) and propagates this to synchronous I/O units.
- The node address can be fixed by rotary switches, or set by software. Choose the method that best suits your way of engineering.
- Slave configuration by Sysmac Studio can be done centrally via the controller, or on-the-spot using the Coupler's built-in USB port.

* Input per Coupler Unit: Maximum 1024 bytes, Output per Coupler Unit: Maximum 1024 bytes

	NX Unit power supply capacity	10 W max. Refer to Installation orientation and restrictions for details.	
	NX Unit power supply efficiency	70%	
	Isolation method	No isolation between NX Unit power supply and Unit power supply terminals	
	Unwired terminal current capacity	4 A max.	
I/O power supply	Power supply voltage	5 to 24 VDC (4.5 to 28.8 VDC)	
	Maximum I/O power supply current	4 A max.	10 A max.
	Power supply terminal current capacity	4 A max.	10 A max.
NX Unit power consumption		1.45 W max.	
Current consumption from I/O power supply		10 mA max. (for 24 VDC)	
Dielectric strength		510 VAC for 1 min, leakage current: 5 mA max. (between isolated circuits)	
Insulation resistance		100 VDC, 20 MΩ min. (between isolated circuits)	

*1. Refer to the *NX-series Safety Control Units User's Manual* (Cat. No. Z930) for the number of Safety Control Units that can be connected.

*2. This specification applies to a connection to the built-in EtherCAT port on an NJ-series CPU Unit.

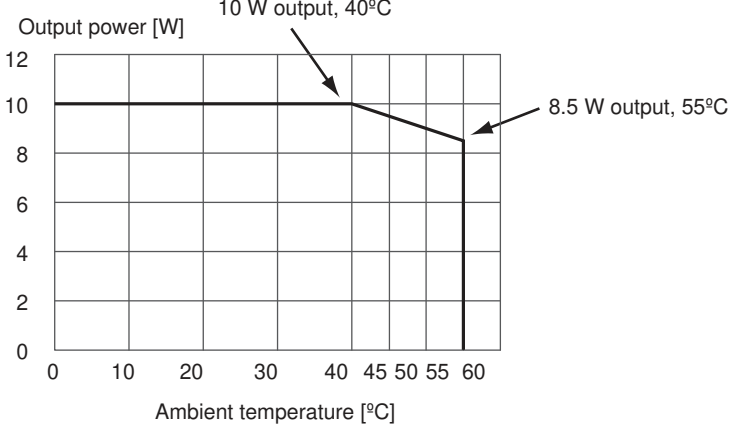

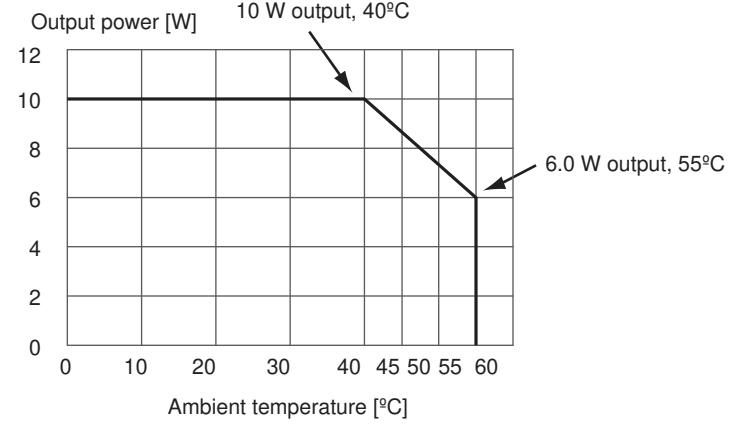

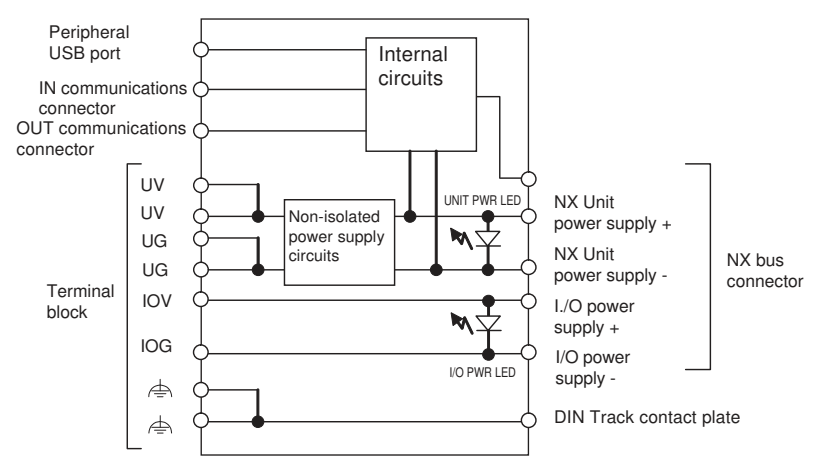

*3. This depends on the specifications of the EtherCAT master. The values are as follows when you are connected to the built-in EtherCAT port on an NJ5-series CPU Unit: 500 μs, 1,000 μs, 2,000 μs, and 4,000 μs. Refer to the *NJ-series CPU Unit Built-in EtherCAT Port User's Manual* (Cat. No. W505) for the most recent specifications.

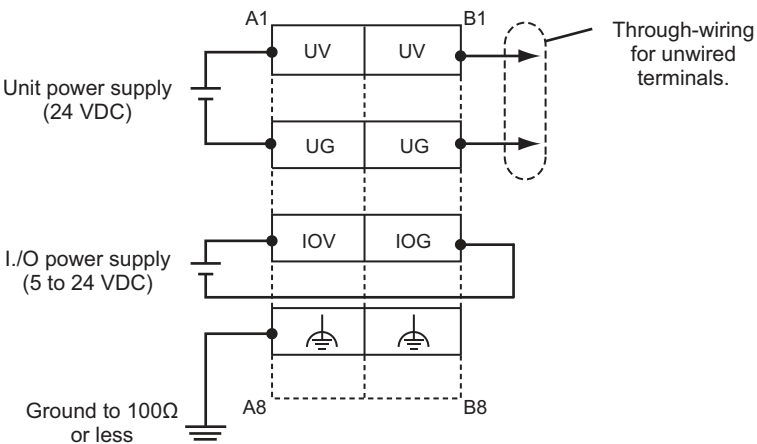

*4. This depends on the Unit configuration.

*5. Use an output voltage that is appropriate for the I/O circuits of the NX Units and the connected external devices.

NX-series Digital Input Unit

NX-ID/IA

A Wide Range of Digital Input Units from General Purpose use to High-Speed Synchronous Control

- Digital Input Units for the NX-series modular I/O system.
- Connect to other NX-series I/O Units and EtherCAT Coupler units using the high-speed NX-bus.
- Synchronous Units update the status of input devices to the controller every EtherCAT cycle.

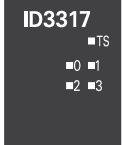

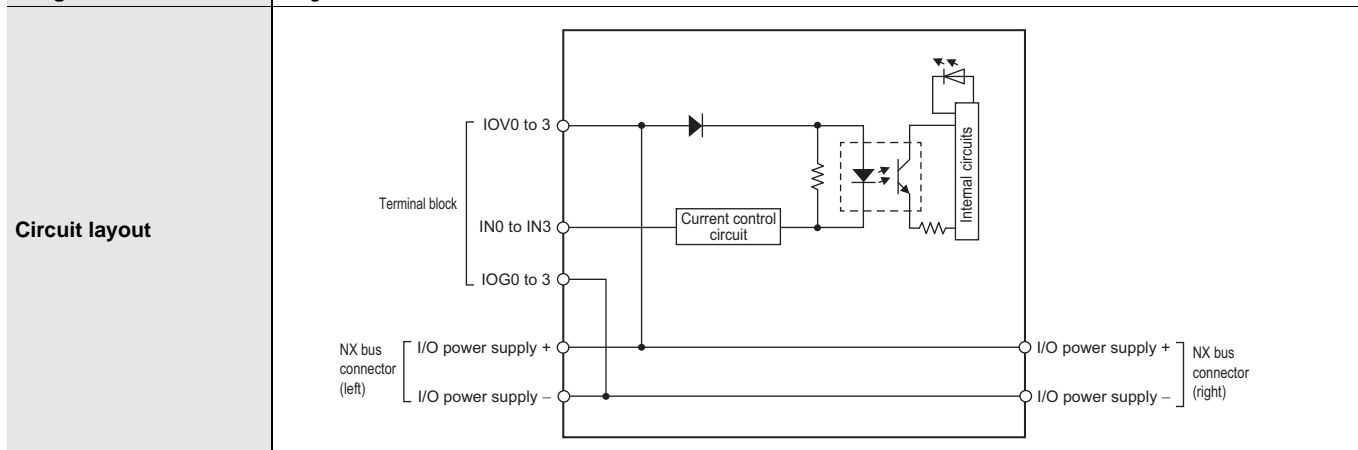

Features

- High-speed I/O refreshing is possible by connecting with the NX-series EtherCAT Coupler.
- I/O refreshing can be synchronized with the control cycle of the Controller. (Synchronous refreshing)
- ON/OFF response time of the high-speed model is 100 ns max, which enables high-speed, high-precision control.
- The screwless terminal block is detachable for easy commissioning and maintenance.
- Screwless clamp terminal block is detachable for easy commissioning and maintenance.
- Up to 16 digital inputs in a space-saving 12 mm width.
- The lineup includes 4-point, 8-point, and 16-point types with 3-wire, 2-wire and 1-wire connection methods.
- With input refreshing with input changed time, the Input Unit records the time when the input is changed and the changed time with the input value is read into the Controller.
- Using with the Unit that supports output refreshing with specified time stamp enables high-precision I/O control independent of the control cycle of the Controller.

NX-series Digital Output Units

NX-OD/OC

A Wide Range of Digital Output Units from General Purpose use to High-Speed Synchronous Control

- Transistor and relay Output Units for the NX-series modular I/O system.
- Connect to other NX-series I/O Units and EtherCAT Coupler units using the high-speed NX-bus.
- Synchronous Units update their output status according to the controller's instructions every EtherCAT cycle.

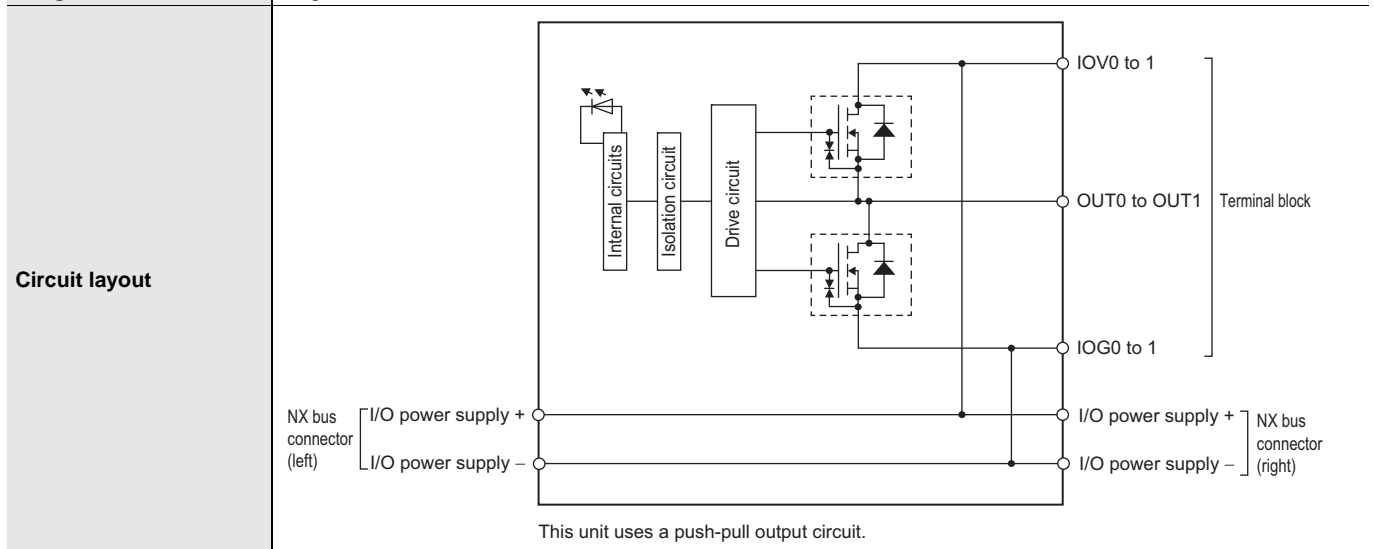

Features

- High-speed I/O refreshing is possible by connecting with the NX-series EtherCAT Coupler.
- Output refreshing can be synchronized with the control cycle of the Controller. (Synchronous refreshing)
- ON/OFF response time of the high-speed model is 300 ns max, which enables high-speed, high-precision control.
- The screwless terminal block is detachable for easy commissioning and maintenance.
- Screwless clamp terminal block significantly reduces wiring work.
- Up to 16 digital outputs in a space-saving 12 mm width.
- The lineup includes 2-point, 4-point, 8-point, and 16-point types with 3-wire, 2-wire and 1-wire connection methods.
- With output refreshing with specified time stamp, the Output Unit refreshes outputs at the time specified by the program. This enables high-precision output control independent of the control cycle of the Controller.

NX-series Analog Input Unit

NX-AD

Analog Inputs to meet all machine control needs; from general-purpose inputs to high-speed synchronous, high-resolution units

- Analog Input Units for the NX-series modular I/O system.
- Connect to other NX-series I/O Units and EtherCAT Coupler units using the high-speed NX-bus.
- Separate modules for voltage- and current inputs.

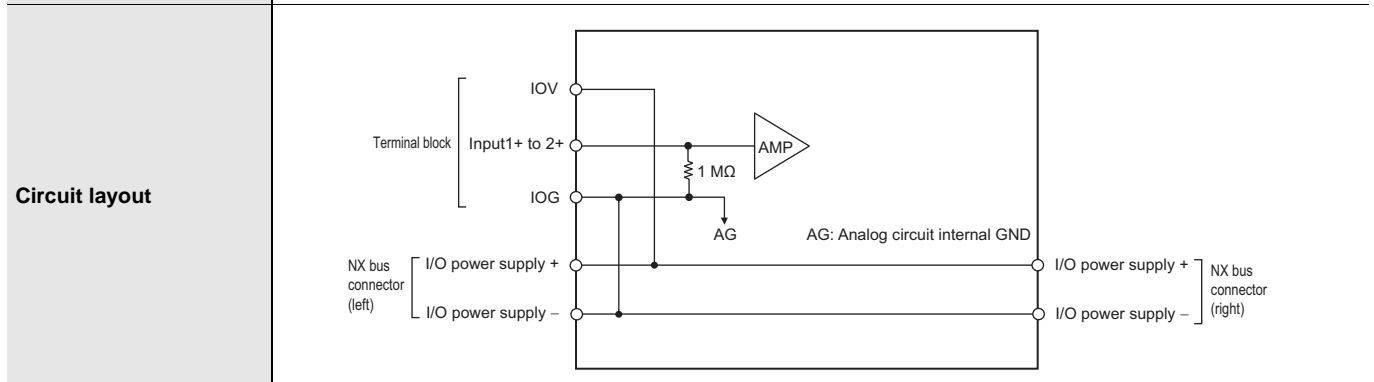

Features

- Up to eight analog inputs per unit.
- Free-run refreshing or synchronous I/O refreshing can be selected using the NX-series EtherCAT Coupler.
- Input update cycles of 10 μ s per channel, and a resolution of 1/30000, ideal for high-speed measurement and, high-precision control.
- All basic models are available as single-ended and differential-input types.
- The screwless terminal block is detachable for easy commissioning and maintenance.
- Screwless push-in terminal block significantly reduces wiring work.
- All models are just 12 mm wide, saving space in your cabinet.

Analog Input Unit (voltage input type) 2 points **NX-AD2603**

Unit name	Analog Input Unit (voltage input type)	Model	NX-AD2603	
Capacity	2 points	External connection terminals	Screwless clamping terminal block (8 terminals)	
I/O refreshing method	Free-Run refreshing			
Indicator	TS indicator 	Input method	Single-ended input	
		Input range	-10 to +10 V	
		Input conversion range	-5 to 105% (full scale)	
		Absolute maximum rating	±15 V	
		Input impedance	1 MΩ min.	
		Resolution	1/8000 (full scale)	
		Overall accuracy	25°C	±0.2% (full scale)
			0 to 55°C	±0.4% (full scale)
Conversion time	250 μs/point			
Dimensions	12 (W) x 100 (H) x 71 (D)	Isolation method	Between the input and the NX bus: Power = Transformer, Signal = Digital isolator (no isolation between inputs)	
Insulation resistance	20 MΩ min. between isolated circuits (at 100 VDC)	Dielectric strength	510 VAC between isolated circuits for 1 minute at a leakage current of 5 mA max.	
I/O power supply method	Supply from the NX bus	Current capacity of I/O power supply terminal	IOV: 0.1 A/terminal max., IOG: 0.1 A/terminal max.	
NX Unit power consumption	1.05 W max.	I/O current consumption	No consumption	
Weight	70 g max.

NX-series Analog Output Unit

NX-DA

Analog Outputs to meet all machine control needs; from general-purpose outputs to high-speed synchronous, high-resolution control outputs

- Analog Output Units for the NX-series modular I/O system.
- Connect to other NX-series I/O Units and EtherCAT Coupler units using the high-speed NX-bus.
- Separate modules for voltage- and current outputs.

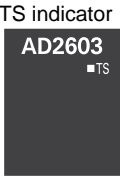

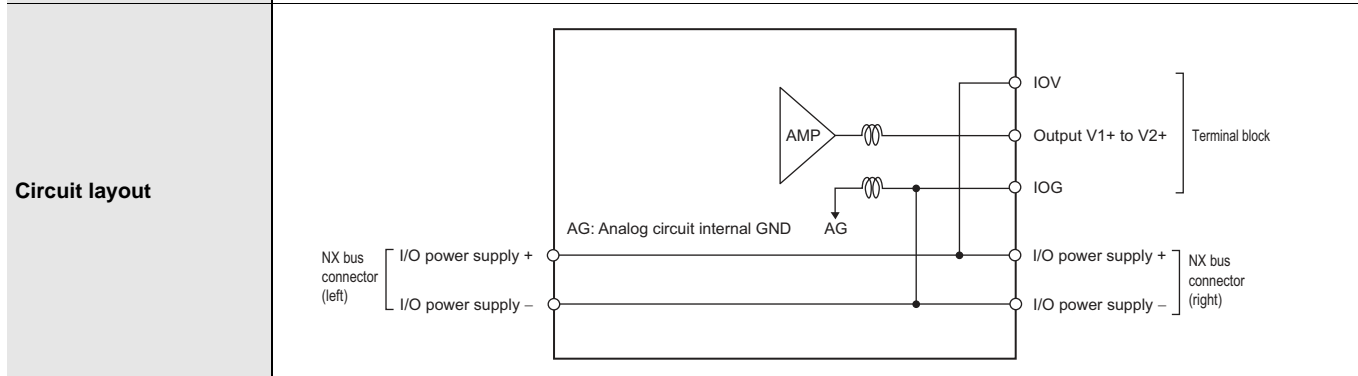

Features

- Up to four analog outputs per unit.
- Free-run refreshing or synchronous I/O refreshing can be selected using the NX-series EtherCAT Coupler.
- Output update cycles of 10 μ s per channel, and resolution of 1/30000, ideal for high-speed, high-precision control.
- The screwless terminal block is detachable for easy commissioning and maintenance.
- Screwless push-in terminal block significantly reduces wiring work.
- All models are just 12 mm wide, saving space in your cabinet.

NX-series Temperature Input Unit

NX-TS

Temperature Input Units for Standard and High-speed, High-precision Temperature measurement and control

- Temperature Input Units for the NX-series modular I/O system.
- Connect to other NX-series I/O Units and EtherCAT Coupler units using the high-speed NX-bus.
- Thermocouple and platinum resistance thermometer input models are available.

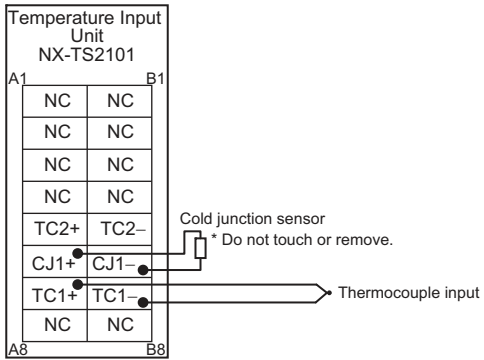

Features

- Input up to four temperature sensor signals with one Unit.
- Three sampling speeds, 250 ms, 60 ms, and 10 ms, are available to cover a wide range from general-purpose application to high-speed, high-precision control.
- Moving average, input sensor disconnection detection function, cold junction compensation enable/disable selection function, and input compensation.
- The screwless terminal block is detachable for easy commissioning and maintenance.
- Screwless push-in terminal block significantly reduces wiring work.

- *1. To convert the temperature unit from Celsius to Fahrenheit, use the following equation.
Fahrenheit temperature (°F) = Celsius temperature (°C) x 1.8 + 32
- *2. If there is more than one input range for the same input type, the one with narrower input range has higher resolution.
- *3. For a thermocouple input type Temperature Input Unit, the overall accuracy is guaranteed for a set consisting of a cold junction sensor that is mounted on the terminal block and a Temperature Input Unit. Be sure to use the terminal block and Temperature Input Unit with the same calibration control number together. For the 24 mm wide model, also be sure the left and right terminal blocks are correctly attached.

- *4. An error for a measured value when the ambient temperature changes by 1°C. The following formula is used to calculate the error of the measured value.
Overall accuracy = Reference accuracy + Temperature characteristic x Change in the ambient temperature + Cold junction compensation error
(Calculation example)
Conditions

Item	Description
Ambient temperature	30°C
Measured value	100°C
NX Unit	NX-TS2101
Thermocouple	K thermocouple

The characteristic values are formulated from the data sheet or reference accuracy and temperature coefficient table under the above conditions

Item	Description
Reference accuracy	-100 to 400°C: ±1.5°C
Temperature coefficient	-100 to 400°C: ±0.30°C/°C
Change in the ambient temperature	25°C -> 30°C 5 deg
Cold junction compensation error	±1.2°C

Therefore,

$$\begin{aligned} \text{Overall accuracy} &= \text{Reference accuracy} + \text{Temperature characteristic} \times \text{Change in the ambient temperature} + \text{Cold junction compensation error} \\ &= \pm 1.5^\circ\text{C} + (\pm 0.30^\circ\text{C}/^\circ\text{C}) \times 5 \text{ deg} + \pm 1.2^\circ\text{C} \\ &= \pm 4.2^\circ\text{C} \end{aligned}$$

- *5. The ppm value is for the full scale of temperature range.

• Cold Junction Compensation Error Specifications for Units That Take a Thermocouple Input Type

The cold junction compensation error for Units that take a thermocouple input type is restricted as follows according to the installation orientation and the power consumption of adjacent Units.

(a) For upright installation, when the power consumption is 1.5 W or less for both the left and right adjacent Units

The cold junction compensation error is $\pm 1.2^{\circ}\text{C}$.

However, there are exceptions depending on the input type and temperature. Those conditions and the cold junction compensation error are as in the table below.

Input type and temperature range	Cold junction compensation error
T below -90°C	$\pm 3.0^{\circ}\text{C}$
J, E, K and N below -100°C	
U, L and PLII	
R and S below 200°C	
B below 400°C	Not guaranteed
W	$\pm 3.0^{\circ}\text{C}$

(b) When the power consumption of either the left or the right adjacent Unit is more than 1.5 W but less than 3.9 W. Or for any installation other than upright, when the power consumption of both the left and right adjacent Units is less than 3.9 W

The cold junction compensation error is $\pm 4.0^{\circ}\text{C}$.

However, there are exceptions depending on the input type and temperature. Those conditions and the cold junction compensation error are as in the table below.

Input type and temperature range	Cold junction compensation error
T below -90°C	$\pm 7.0^{\circ}\text{C}$
J, E, K and N below -100°C	
U, L and PLII	
R and S below 200°C	
B below 400°C	Not guaranteed
W	$\pm 9.0^{\circ}\text{C}$

(c) When the power consumption exceeds 3.9 W for either the left or right adjacent Unit

Do not use the above condition (c) because the cold junction compensation error is not guaranteed in this condition.

* The power consumption of adjacent Units is the total of the following values.

The power consumption of the NX Unit power supply and I/O power supply for the NX Units adjacent to the Temperature Input Unit. If the adjacent Unit is an Input Unit, it is the total power consumption according to the input current.

NX-series Incremental Encoder Input Unit

NX-EC0□□□

Read position information from incremental encoders, synchronised with the control cycle and EtherCAT Distributed Clock.

- Process encoder input data using the MC Function Modules of the NJ -series Machine Automation Controller.
- The time when the encoder input value is changed can be read. This enables high-precision timing control in combination with time-stamp outputs.*

* Available soon

NX-EC0122

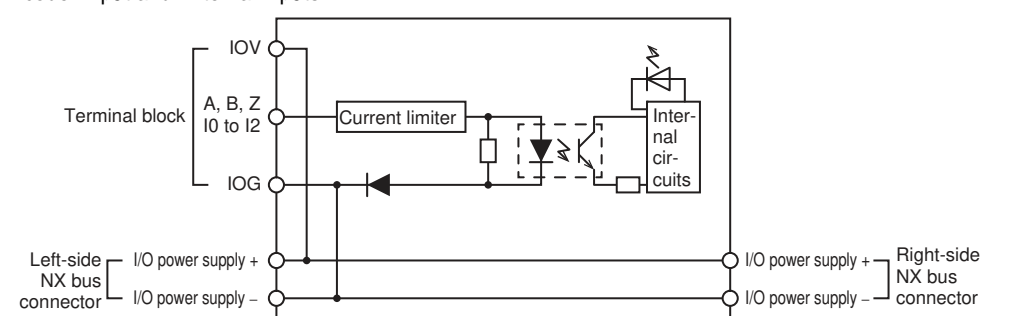

NX-EC0142

Features

- Open collector output type and line driver output type Incremental Encoders can be connected.
- Free-Run refreshing or Synchronous I/O refreshing can be selected for refreshing with the NX-series EtherCAT Coupler.
- When the MC Function Modules of the NJ-series Machine Automation Controller are used, the encoder input can be used for motion control instructions as an "axis".
- Latch function (1 internal signal and 2 input signals from external devices)
- Pulse Period Measurement
- 32 bit counters (80000000 to 7FFFFFFF HEX)
- Maximum counting rate: 4 MHz (Line receiver: 4 MHz, Open collector: 500 kHz)
- Input edge time stamps
- The maximum and minimum counter values can be set.

NX-series SSI Input Unit

NX-ECS□□□

Read position information from encoders with Synchronous Serial Interface (SSI).

- Process SSI encoder input data using the MC Function Modules of the NJ-series Machine Automation Controller.
- Encoder data can be synchronised with the control cycle and EtherCAT Distributed Clock.

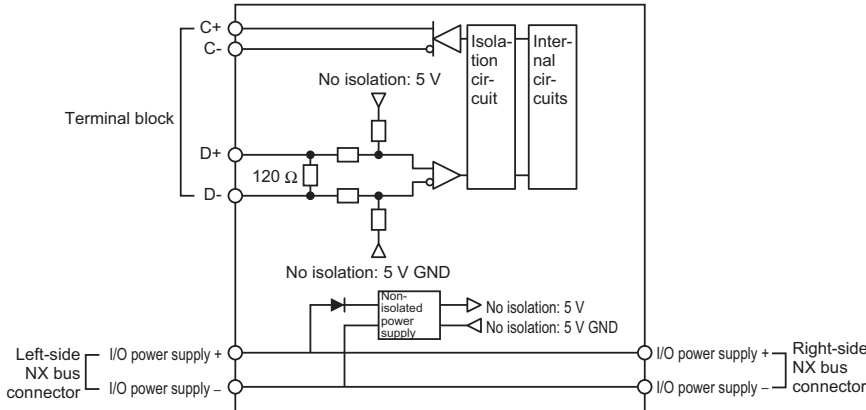

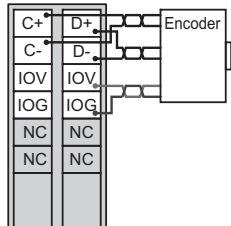

Features

- SSI clock frequency is supported up to 2 MHz.
- Free-run refreshing or Synchronous I/O refreshing can be selected for refreshing with the NX-series EtherCAT Coupler.
- When the MC Function Modules of the NJ-series Machine Automation Controller are used, the encoder input can be used for motion control instructions as an "axis".
- Choice of SSI Coding Methods (No conversion, binary code, or gray code)
- Input edge time stamps
- Multi turn and single turn SSI encoders are supported.
- Data Refresh Status (Data refreshing can be checked on the host controller.)
- Maximum connecting SSI cable length:400m

NX-series Pulse Output Unit

NX-PG0□□□

Positioning with Pulse Input Type Motor Drivers Such As Stepper Motor Drive

- The MC Function Modules of the NJ-series Machine Automation Controller enable pulse outputs for motor control.
- The same motion control instructions as those for Servomotor control allow you to program single-axis PTP control and interpolation.

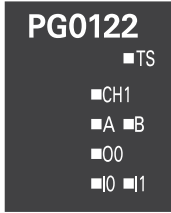

Features

- When the motion control instructions of the MC Function Modules of the NJ-series Machine Automation Controller are used, number of usable units is the same as the maximum number of axes controlled by the NJ-series Controller.
- Synchronous I/O refreshing with the EtherCAT Coupler Unit.
- Latch function (2 external latch inputs)
- Maximum pulse output speed: 500 kpps

Power Supply Unit, Power Connection Unit, and FG Terminal Expansion Unit for NX-series

- Provide stabilised power to the internal circuits of NX I/O Units.
- Feed additional power to I/O circuits of NX I/O Units.
- Provide extra terminals for sensor/actuator power and termination of shielded cabling.

Features

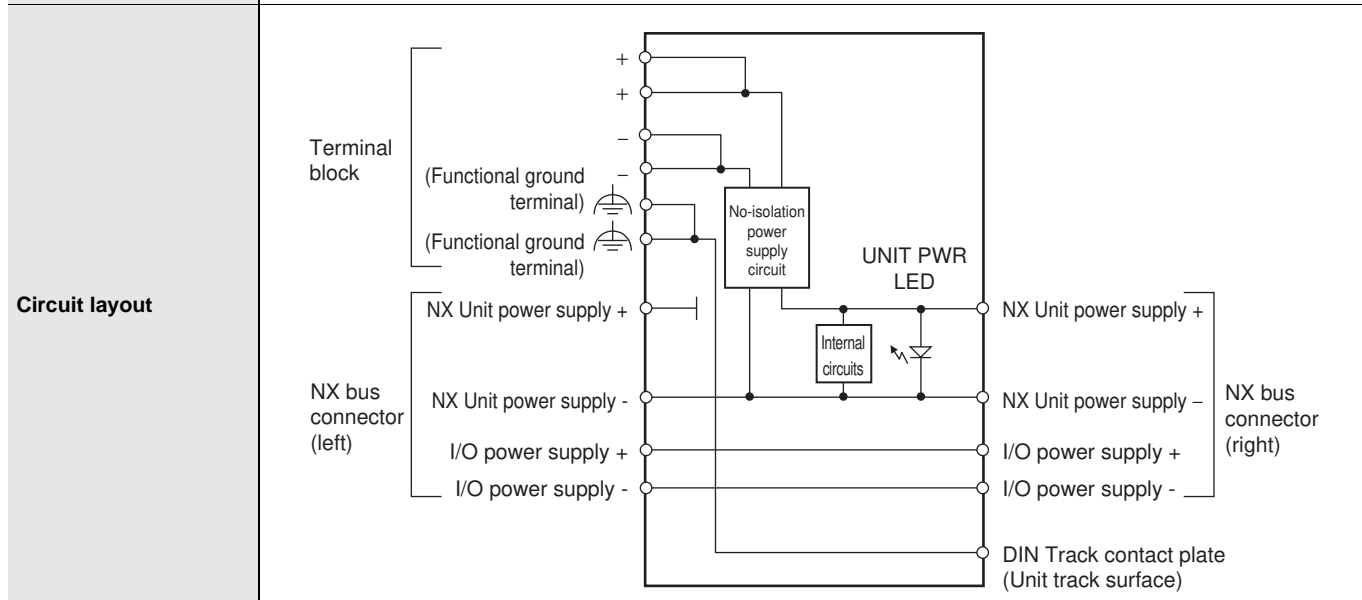

- Units to feed in additional Unit power and I/O power to an NX-series remote I/O terminal.
- Screwless clamp terminal block significantly reduces wiring work.
- Space-saving 12 mm wide units.
- The NX Unit Power Supply Unit allows expansion of the I/O configuration beyond the maximum power supply capacity of the EtherCAT Coupler.
- The I/O Power Supply Unit is used when the total allowed I/O current per feed terminal is exceeded, or to split I/O power into groups.
- The I/O Power Connection Unit can be used as an additional power supply terminal for connected sensors and actuators.
- The FG Terminal Expansion Unit can be used as ground terminal for wire shields.
- The screwless terminal block is detachable for easy commissioning and maintenance.

NX-series Safety Control Units

NX-SL/SI/SO

Integration of Safety into Machine Automation Enables Simple, Flexible System Configuration.

- EN ISO13849-1 (PLe/Safety Category4), IEC 61508 (SIL3) certified.
- One connection using Safety over EtherCAT (FSoE) * protocol enables flexible configuration by mixing the Safety Units with standard NX I/O.
- Hardware and safety circuits can be configured using the Sysmac Studio (Ver. 1.07)

* Safety over EtherCAT (FSoE): The open protocol Safety over EtherCAT (abbreviated with FSoE "FailSafe over EtherCAT") defines a safety related communication layer for EtherCAT. Safety over EtherCAT meets the requirements of IEC 61508 SIL 3 and enables the transfer of safe and standard information on the same communication system without limitations with regard to transfer speed and cycle time.

Features

- Integrated safety into machine automation possible by connecting with the NX-series EtherCAT Coupler.
- The Safety CPU Unit controls up to 128 Safety I/O Units.
- 4 or 8 points per Safety Input Unit. The 4-point Safety Input Unit can be directly connected with OMRON Non-contact Switches and Singlebeam Sensors.
- 2 or 4 points per Safety Output Unit. The 2-point Safety Output Unit is characterized by large output breaking current of 2.0 A.
- The Safety Units can be freely allocated in any combination with standard NX I/O.
- Compliant with IEC61131-3
- Safety programs can be standardized and reused efficiently by using POUs for design and operation.

The NX-series Safety Control Units allow you to build a safety control system that meets the following standards.

- Requirements for SIL 3 (Safety Integrity Level 3) in IEC 61508, EN 62061, Safety Standard for Safety Instrumented Systems (Functional Safety of Electrical/Electronic/Programmable Electronic Safety-related Systems)
- Requirements for PLe (Performance Level e) and for safety category 4 in EN ISO13849-1

The NX-series Safety Control Units are also registered for C-Tick and KC compliance.

System Configuration

G5-Series AC Servo Drives with Built-in EtherCAT Communications

R88D-KN□-ECT

G5-series provides both high-speed and highly-accurate control and safety

- High-accuracy positioning with fully-closed control.
- Servo Drives for 400VAC widens applicable systems and environment, including large-scale equipment and overseas facilities.
- Safe design and Safe Torque Off (STO) function (application pending)
- Vibration can be suppressed in acceleration/deceleration even in low rigidity mechanical systems.

- Note:**
1. The above items reflect individual evaluation testing. The results may differ under compound conditions.
 2. Always disconnect all connections to the Servo Drive before you perform insulation resistance tests on it. If you perform an insulation resistance test while the Servo Drive is connected, the Servo Drive may be damaged. Never perform dielectric strength tests on the Servo Drive. Failure to follow this precaution may result in damaging internal elements.
 3. Depending on the operating conditions, some Servo Drive parts will require maintenance. For details, refer to G5 Series USER'S MANUAL (Cat.No. I576)

G5-series AC Servo Drives with Built-in EtherCAT Communications Linear Motor Type R88D-KN□-ECT-L

Linear Motor for Higher-speed and Higher-precision

- Inherited functions and performance of G5series and EtherCAT communications achieve high-speed and high-precision positioning.
- Same Iron-core motor type for 200V AC and 400V AC.
- Quick setup by automatic setup function

General Specifications

UL standards	UL 508C	
CSA standards	CSA22.2 No.14	

* The certification from third party is issued in combination with the revolution type motor. The conformance as the whole system should be checked by machine builder.

Note: 1. The above items reflect individual evaluation testing. The results may differ under compound conditions.

Note: 2. Always disconnect all connections to the Servo Drive before you perform insulation resistance tests on it. If you perform an insulation resistance test while the Servo Drive is connected, the Servo Drive may be damaged. Never perform dielectric strength tests on the Servo Drive. Failure to follow this precaution may result in damaging internal elements.

Note: 3. Depending on the operating conditions, some Servo Drive parts will require maintenance. For details, refer to the G5 series USER'S MANUAL (Cat.No.I577). Confirm the Manual No. that is listed in Related Manuals.

Note: 4. Vibration, unstable movement, or accoustic noise may occur by an exogenous noise. In such case, please reduce incoming noise as referred in G5 series user's manuals.

EtherCAT Status Indicators

These indicators show the status of EtherCAT communications. For details, refer to the G5 series USER'S MANUAL (Cat.No.I576).

Control I/O Connector (CN1)

Used for command input signals and I/O signals.

External Encoder Connector (CN4)*

Connector for an encoder signal used during fully-closed control.

EtherCAT Communications Connectors (ECAT IN and ECAT OUT)

These connectors are for EtherCAT communications.

Analog Monitor Connector (CN5)

You can use a special cable to monitor values, such as the motor rotation speed, torque command value, etc.

USB Connector (CN7)

Communications connector for the computer.

Safety Connector (CN8)

Connector for safety devices.

If no safety devices are used, keep the factory-set safety bypass connector installed.

*1. The supported speed is the internal feedback pulse speed [external encoder pulse/s] of the external encoder that can be processed by the Servo Drive.

Check the instruction manual of the external encoder for the speed range supported by your external encoder.

*2. These are the directions that the Drive counts a 90° phase difference output.

*3. For the external encoder connection direction, set the direction so that count-up occurs when the motor shaft is rotating counterclockwise, and count-down occurs when the motor shaft is rotating clockwise. If the connection direction cannot be selected due to installation conditions or any other reason, the count direction can be reversed using External Feedback Pulse Direction Switching (3326 hex).

*4. The resolution and maximum speed are the values for the G5-series Servo Drive. The resolution and maximum speed may be different from the specifications of the feedback encoder due to restriction on the maximum pulse frequency of the Servo Drive.

G5-Series AC Servomotors

R88M-K INC ABS/INC

**Servo family for accurate motion control.
Power range extended up to 15kW**

- Maximum rotation speed : 6,000 r/min
- Featuring a 20-bit high-resolution incremental encoder
- Servomotors Conform to IP67
- 60% cogging torque reduction

General Specifications

Item	3,000-r/min motors		1,000-r/min motors 1,500-r/min motors 2,000-r/min motors

Ambient operating temperature and operating humidity	0 to 40°C 20 to 85% RH (with no condensation)		
Storage ambient temperature and humidity	-20 to +65°C, 20% to 85% RH (with no condensation) Guaranteed maximum temperature: 72 hours at 80°C		
Operating and storage atmosphere	No corrosive gases		
Vibration resistance *1	Acceleration of 49 m/s ² 24.5 m/s ² max. in X, Y, and Z directions when the motor is stopped		
Impact resistance	Acceleration of 98 m/s ² max. 3 times each in X, Y, and Z directions		
Insulation resistance	Between power terminal and FG terminal: 20 MΩ min. (at 500 VDC Megger)		
Dielectric strength	1,500 VAC between power terminal and FG terminal (sensed current 10 mA) for 1 min (voltage 100 V, 200 V) 1,800 VAC between power terminal and FG terminal (sensed current 10 mA) for 1 min (voltage 400 V) 1,000 VAC between brake terminal and FG terminal (sensed current 10 mA) for 1 min		
Insulation class	Type B	Type F	
Protective structure	IP67 (except for through-shaft parts and motor and encoder connector pins)		
International standard	EC directive	Low voltage directive	EN60034-1/-5
	UL standards	UL1004-1	
	CSA standards	CSA 22.2 No.100	
			UL1004-1, UL1004-6 *2

*1 The amplitude may be amplified by machine resonance. Do not exceed 80% of the specified value for extended periods of time.

*2 UL 1004-6 applies only to 1,500-r/min Servomotors of 7.5 to 15 kW and 1,000-r/min Servomotors of 4.5 to 6 kW.

Note: 1. Do not use the cable when it is laying in oil or water.

2. Do not expose the cable outlet or connections to stress due to bending or the weight of the cable itself.

3. Always disconnect all connections to the Servo Motor before you perform insulation resistance tests on it. If you perform an insulation resistance test while the Servo Motor is connected, the Servo Motor may be damaged.

Never perform dielectric strength tests on the Servo Motor . Failure to follow this precaution may result in damaging internal elements.

4. To conform EMC directive, the tips on wiring and installation written in the G5 series user's manual must be followed. Confirm the Manual No. that is listed in Related Manuals.

*1 These are the values when the motor is combined with a driver at normal temperature (20°C, 65%). The momentary maximum torque indicates the standard value.

*2 Applicable load inertia.

- The operable load inertia ratio (load inertia/rotor inertia) depends on the mechanical configuration and its rigidity. For a machine with high rigidity, operation is possible even with high load inertia. Select an appropriate motor and confirm that operation is possible.
- If the dynamic brake is activated frequently with high load inertia, the Dynamic Brake Resistor may burn. Do not repeatedly turn the servo ON/OFF while the dynamic brake is enabled.
- The dynamic brake is designed only for emergency stops. Design the system so that the Servomotor remains stopped for at least 3 minutes after applying the dynamic brake. Otherwise the dynamic brake circuits may fail.

*3 The allowable radial and thrust loads are the values determined for a limit of 20,000 hours at normal operating temperatures. The allowable radial loads are applied as shown in the following diagram.

*4 This is a non-excitation brake. (It is released when excitation voltage is applied.)

*5 The operation time is the value (reference value) measured with a surge suppressor (CR50500 by Okaya Electric Industries Co., Ltd.).

Torque and Rotation Speed Characteristics

• 3,000 r/min Servomotors (100 VAC Input Power)

The following graphs show the characteristics with a 3-m standard cable and a 100 VAC input.

• R88M-K05030H/T (50W)

• R88M-K10030L/S (100W)

• R88M-K20030L/S (200W)

• R88M-K40030L/S (400W)

- Note:**
1. The continuous operation range is the range in which continuous operation is possible. Continuous operation at the maximum speed is also possible. However, doing so will reduce the output torque.
 2. If the motor power cable exceeds 20 m, the voltage drop will increase and the momentary operation range will become narrower.

*1 These are the values when the motor is combined with a driver at normal temperature (20°C, 65%). The momentary maximum torque indicates the standard value.

*2 Applicable load inertia.

- The operable load inertia ratio (load inertia/rotor inertia) depends on the mechanical configuration and its rigidity. For a machine with high rigidity, operation is possible even with high load inertia. Select an appropriate motor and confirm that operation is possible.
- If the dynamic brake is activated frequently with high load inertia, the Dynamic Brake Resistor may burn. Do not repeatedly turn the servo ON/OFF while the dynamic brake is enabled.
- The dynamic brake is designed only for emergency stops. Design the system so that the Servomotor remains stopped for at least 3 minutes after applying the dynamic brake. Otherwise the dynamic brake circuits may fail.

*3 The allowable radial and thrust loads are the values determined for a limit of 20,000 hours at normal operating temperatures. The allowable radial loads are applied as shown in the following diagram.

*4 This is a non-excitation brake. (It is released when excitation voltage is applied.)

*1 These are the values when the motor is combined with a driver at normal temperature (20°C, 65%). The momentary maximum torque indicates the standard value.

*2 Applicable load inertia.

- The operable load inertia ratio (load inertia/rotor inertia) depends on the mechanical configuration and its rigidity. For a machine with high rigidity, operation is possible even with high load inertia. Select an appropriate motor and confirm that operation is possible.
- If the dynamic brake is activated frequently with high load inertia, the Dynamic Brake Resistor may burn. Do not repeatedly turn the servo ON/OFF while the dynamic brake is enabled.
- The dynamic brake is designed only for emergency stops. Design the system so that the Servomotor remains stopped for at least 3 minutes after applying the dynamic brake. Otherwise the dynamic brake circuits may fail.

*3 The allowable radial and thrust loads are the values determined for a limit of 20,000 hours at normal operating temperatures. The allowable radial loads are applied as shown in the following diagram.

*4 This is a non-excitation brake. (It is released when excitation voltage is applied.)

*5 The operation time is the value (reference value) measured with a surge suppressor (CR50500 by Okaya Electric Industries Co., Ltd.).

*6 Direct current switching with a varistor (Z15D151 by Ishizuka Electronics Co.).

*7 Direct current switching with a varistor (TNR9G820K by Nippon Chemi-Con Corporation).

Torque and Rotation Speed Characteristics

• 1,000 r/min Servomotors (200/400 VAC Input Power)

cable and a 200 VAC input.

The following graphs show the characteristics with a 3 m standard

- R88M-K90010H/T/F/C (900W)

- R88M-K2K010H/T/F/C (2kW)

- R88M-K3K010H/T/F/C (3kW)

- R88M-K4K510T/C (4.5kW)

- R88M-K6K010T/C (6kW)

- Note:**
1. The continuous operation range is the range in which continuous operation is possible. Continuous operation at the maximum speed is also possible. However, doing so will reduce the output torque.
 2. If the motor power cable exceeds 20 m, the voltage drop will increase and the momentary operation range will become narrower.

Encoder Specifications

Incremental Encoders

Item	Specifications
Encoder system	Optical encoder 20 bits
No. of output pulses	Phases A and B: 262,144 pulses/rotation Phase Z: 1 pulse/rotation
Power supply voltage	5 VDC±5%
Power supply current	180 mA (max.)
Output signals	+S, -S
Output interface	RS-485 compliance

Absolute Encoders

Item	Specifications
Encoder system	Optical encoder 17 bits
No. of output pulses	Phases A and B: 32,768 pulses/rotation Phase Z: 1 pulse/rotation
Maximum rotations	-32,768 to +32,767 rotations
Power supply voltage	5 VDC±5%
Power supply current	110 mA (max.)
Applicable battery voltage	3.6 VDC
Current consumption of battery	265 μA for a maximum of 5 s right after power interruption 100 μA for operation during power interruption 3.6 μA when power is supplied to Servo Drive
Output signals	+S, -S
Output interface	RS-485 compliance

Note: Multi-rotation Data Backup

- The multi-rotation data will be lost if the battery cable connector is disconnected at the motor when connecting the battery cable for the absolute encoder and battery.
- The multi-rotation data will be lost if CN2 is disconnected when connecting the battery to CN1.

G5-series Linear Motor

R88L-EC-□

Linear Motor for Higher-speed and Higher-precision

- Lineup of compact and high-thrust iron-core motor type and cogging-free ironless motor type with excellent speed stability.
- Same Iron-core motor type for 200V AC and 400V AC.

General Specifications

● Iron-core Linear Motors

Item	Description
Operating ambient temperature humidity	0 to 40°C, 20% to 80% (with no condensation)
Storage ambient temperature and humidity	-20 to +65°C, 85% max. (with no condensation)
Operating and storage atmosphere	No corrosive gases
Vibration resistance*	Acceleration of 49 m/s ² max. in X, Y, and Z directions
Impact resistance	Acceleration of 98 m/s ² max. 3 times each in X, Y, and Z directions
Insulation resistance	Between power terminal and FG terminal: 10 MΩ min. (at 500 VDC)
Dielectric strength	Between power terminal and FG terminal: 2,750 VDC for 1 s Between power terminal and sensor: 2,750 VDC for 1 s
Protective structure	IP00
Maximum coil temperature (Motor Coil Unit)	130°C
Maximum magnet temperature (Magnet Track)	70°C
Insulation class	Class B
Cooling method	Self-cooling
International standard	EN60034-1
EC directive	
Low voltage directive

Multi-function Compact Inverter

MX2-Series V1 type

With Machine Automation Mentality

- Positioning functionality.
- Fieldbus communications with optional unit *1
EtherCAT, CompoNet and DeviceNet
- Drive Programming.
- Current vector Control.
- High Starting torque: 200% at 0.5 Hz.
- Safety function *2 EN ISO13849-1:2008 (Cat.3/PLd)
IEC60204-1 Stop Category 0
- Speed range up to 580 Hz.

*1 Optional communication unit can be used with the inverter 3G3MX2 of unit version 1.1 or higher.

*2 When optional DeviceNet communication unit or CompoNet communication unit is mounted onto the MX2, the inverter will not conform to the safety standards.

MX2-Series EtherCAT Communication Unit 3G3AX-MX2-ECT

This is the communication unit to connect the Multi-function Compact Inverter MX2 to EtherCAT network.

This communication unit passed the conformance test of EtherCAT.

Note: EtherCAT Communication Unit 3G3AX-MX2-ECT can be used with the inverter 3G3MX2 of unit version 1.1 or higher.

Common Specifications

Item	Specifications	
Model	3G3AX-MX2-ECT	
Power supply	Supplied from the inverter	
Protective structure	Open type (IP20)	
Ambient Operating Temperature	-10 to +50°C	
Ambient Storage Temperature	-20 to +65°C	
Ambient Operating Humidity	20% to 90% RH (with no condensation)	
Vibration Resistance	5.9 m/s ² (0.6 G), 10 to 55 Hz	
Application environment	At a maximum altitude of 1,000 m; indoors (without corrosive gases or dust)	
Weight	100 g max.	
International standard	UL/cUL	UL508C
	EC directive	EMC Directive :EN61800-3:2004 Low Voltage Directive :EN61800-5-1:2003

Physical layer	100BASE-TX (IEEE802.3)
Connector	RJ45 × 2 (shielded type) ECAT IN : EtherCAT input ECAT OUT : EtherCAT output
Communications media	Category 5 or higher (cable with double, aluminum tape and braided shielding) is recommended.
Communications distance	Distance between nodes: 100 m max.
Process data	Fixed PDO mapping PDO mapping
Mailbox (CoE)	Emergency messages, SDO requests, SDO responses, and SDO information
Distributed clock	FreeRun mode (asynchronous)
LED display	L/A IN (Link/Activity IN) × 1 L/A OUT (Link/Activity OUT) × 1 RUN × 1 ERR × 1
CiA402 drive profile	Velocity mode

Function Specifications

Function name		Specifications
Enclosure ratings *1		Open type (IP20)
Control	Control method	Phase-to-phase sinusoidal modulation PWM
	Output frequency range *2	0.10 to 400 Hz (or 580 Hz in the high-frequency mode; restrictions apply)
	Frequency precision *3	Digital command: $\pm 0.01\%$ of the max. frequency, Analog command: $\pm 0.2\%$ of the max. frequency (25 \pm 10°C)
	Frequency setting resolution	Digital setting: 0.01 Hz, Analog setting: One-thousandth of the maximum frequency
	Voltage/Frequency characteristics	V/f characteristics (constant/reduced torque) Sensorless vector control, V/f control with speed feedback
	Overload current rating	Heavy load rating (CT): 150%/60 s Light load rating (VT): 120%/60 s
	Instantaneous overcurrent protection	200% of the value of heavy load rating (CT)
	Acceleration/Deceleration time	0.01 to 3600 s (linear/curve selection), acceleration/deceleration 2 setting available
	Carrier frequency adjustment range	2 to 15 kHz (with derating)
	Starting torque	200%/0.5 Hz (sensorless vector control)
	External DC injection braking	Starts at a frequency lower than that in deceleration via the STOP command, at a value set lower than that during operation, or via an external input. (Level and time settable).
Protective functions		Overcurrent, overvoltage, undervoltage, electronic thermal, temperature error, ground fault overcurrent at power-on status, rush current prevention circuit, overload limit, incoming overvoltage, external trip, memory error, CPU error, USP error, communication error, overvoltage suppression during deceleration, protection upon momentary power outage, emergency cutoff, etc.
Input signal	Frequency settings	Digital Operator External analog input signal: 0 to 10 VDC/4 to 20 mA, Modbus communication (Modbus-RTU)
	RUN/STOP command	Digital Operator External digital input signal (3-wire input supported), Modbus communication (Modbus-RTU)
	Multi-function input	7 points (Selectable from 59 functions)
	Analog input	2 points (Voltage FV terminal: 10 bits/0 to 10 V, Current FI terminal: 10 bits/4 to 20 mA)
	Pulse input	1 point (RP terminal: 32 kHz max., 5 to 24 VDC)
Output signal	Multi-function output	2 points (P1/EDM, P2; selectable from 43 functions)
	Relay output	1 point (1c contact: MC, MA, MB; selectable from 43 functions)
	Analog output (Frequency monitor)	1 point (AM terminal: Voltage 10 bits/0 to 10 V) (Frequency, current selectable)
	Pulse output	1 point (MP terminal: 32 kHz max., 0 to 10 V)
Communications	RS-422	RJ45 connector (for Digital Operator)
	RS-485	Control circuit terminal block, Modbus communication (Modbus-RTU)
	USB	USB1.1, mini-B connector
Drive Programming *4		Calculate, Logic, Control I/O and so on
Other functions		AVR function, V/f characteristics switching, upper/lower limit, 16-step speeds, starting frequency adjustment, jogging operation, carrier frequency adjustment, PID control, frequency jump, analog gain/bias adjustment, S shape acceleration/deceleration, electronic thermal characteristics, level adjustment, restart function, torque boost function, fault monitor, soft lock function, frequency conversion display, USP function, motor 2 control function, UP/DWN, overcurrent control function, etc.
Operating environment	Ambient operating temperature	-10 to 50°C (However, derating is required).
	Ambient storage temperature	-20°C to 65°C
	Ambient operating humidity	20% to 90% RH (with no condensation)
	Vibration resistance	5.9 m/s ² (0.6G), 10 to 55 Hz

	I/O Unit	3G3AX-MX2-EI015-E

*1 Protection method complies with JEM 1030.

*2 To operate the motor at over 50/60 Hz, contact the motor manufacturer to find out the maximum allowable speed of revolution.

*3 For the stable control of the motor, the output frequency may exceed the maximum frequency set in A004 (A204) by 2 Hz max.

*4 Refer to the Drive Programming USER'S MANUAL (No. I580).

	UL/cUL	UL508C	

Note: 1. The applicable motor is a 3-phase standard motor. For using any other type, be sure that the rated current does not exceed that of the Inverter.
 2. Output voltage decreases according to the level of the power supply voltage.
 3. The braking torque at the time of capacitor feedback is an average deceleration torque at the shortest deceleration (when it stops from 50 Hz). It is not a continuous regeneration torque. Also, the average deceleration torque varies depending on the motor loss. The value is reduced in operation over 50 Hz.

Components and Functions

Inverter 3G3MX2

Name	Function
Modbus-RTU Termination resistor selector switch	Use this Terminal Resistor selector switch for RS-485 terminals on the control circuit terminal block. When this switch is turned ON, the internal 200 Ω Resistor is connected.
Safety function selector switch	Turn this switch ON when using the safety function. Turn OFF the power before turning this switch ON/OFF. For details, refer to USER'S MANUAL (Cat.No.I585).
EDM function selector switch	Turn this switch ON when using the EDM output of the safety function. Turn OFF the power before turning this switch ON/OFF. For details, refer to USER'S MANUAL (Cat.No.I585).
USB connector	Use this mini-B USB connector to connect a PC. Even when the Inverter is being operated by a PC, etc., via USB connection, it can still be operated using the Digital Operator.
Connector for Digital Operator	Use this connector to connect the Digital Operator.
Connector for optional board	Use this connector to mount the optional board. (Communications Units and other options can be connected.)
Control circuit terminal blocks A and B	These terminal blocks are used to connect various digital/analog input and output signals for inverter control, etc.
Multi-function contact terminal block	Use this SPDT contact terminal block for relay outputs.
Main circuit terminal block	Use this terminal block to connect an output to the motor and Braking Resistor, etc. Also, use this terminal block to connect the inverter to the main power supply.
CHARGE indicator (Charge indicator LED)	This LED indicator is lit if the DC voltage of the main circuit (between terminals P/+2 and N/-) remains approx. 45 V or above after the power has been cut off. Before wiring, etc. confirm that the Charge LED indicator is turned OFF.

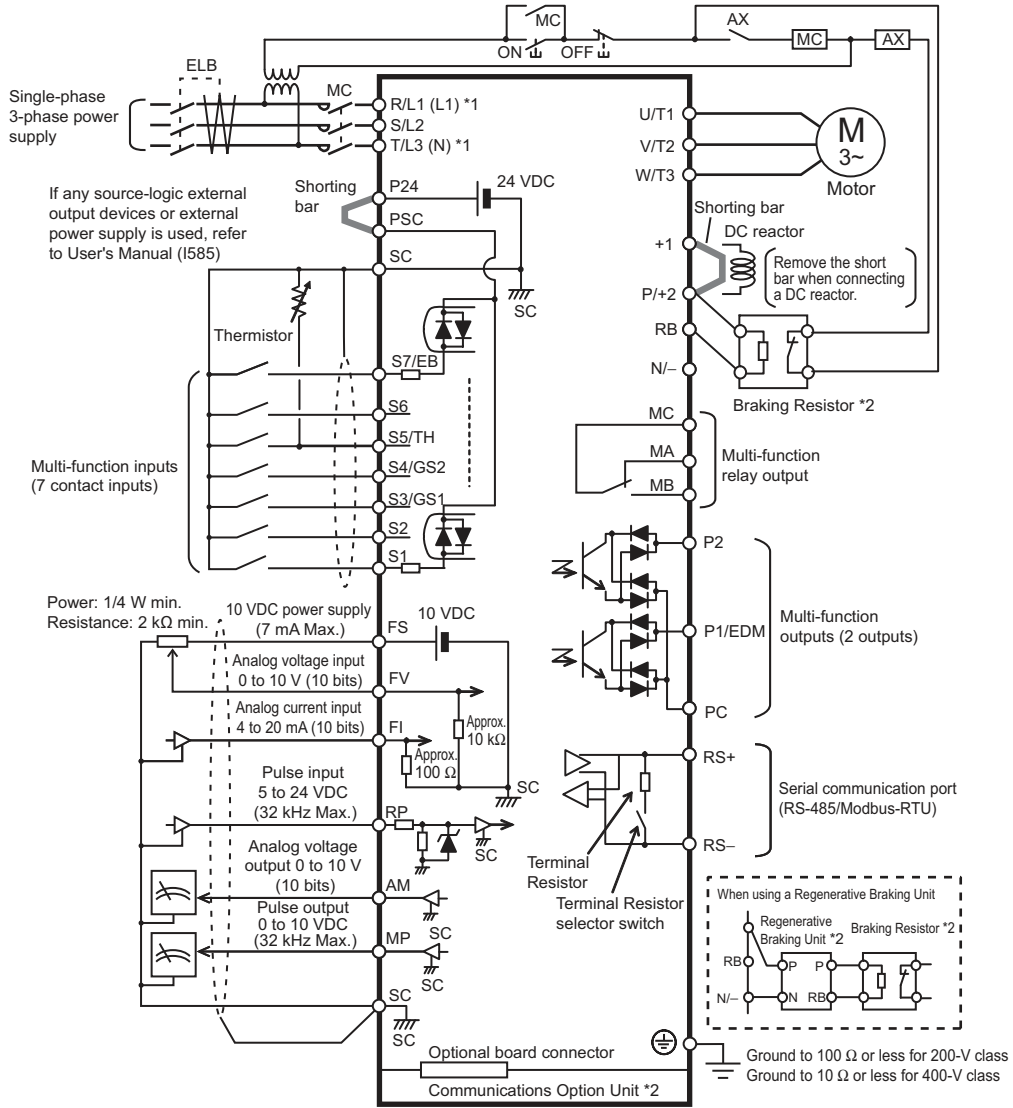

Note: This illustration shows the terminal block with the front cover removed.

*1 Applicable in the sensorless vector control

*2 Applicable in the 0-Hz sensorless vector control

*3 Applicable in the 0 Hz sensorless vector control when using a motor one size smaller in capacity than the inverter

*4 The maximum frequency is set to 9.8 V for a voltage input of 0 to 10 VDC and to 19.8 mA for an current input of 4 to 20 mA, respectively. If this causes any inconvenience, change the default datas.

*5 In the VT mode, the available functions are limited compared with the CT mode. The default setting and setting range of some functions also differ.

*6 The analog voltage and current values for the multi-function monitor output terminals show values that can only be used as a guide for analog meter connection. The maximum output value may differ slightly from 10 V or 20 mA due to the variability of the analog output circuit. If this causes any inconvenience, refer to the RX series V1 type User's Manual. (Man.No.I578) to adjust the default settings.

*7 Complies with the test method specified in JIS C60068-2-6: 2010 (IEC 60068-2-6: 2007).

*8 If the altitude is higher than 1,000 m, reduce the amount of heat generation because air density decreases by 1% with the increasing altitude by 100 m. For switching devices such as IGBTs, the amount of heat generation is proportional to the current flowing in the device and the applied voltage. Therefore, reduce the value of the rated current by 1% with the increasing altitude by 100 m to use a standard inverter. However, this is applicable to an altitude of 2,500 m or lower.

Communication Unit

RX-Series V1 type EtherCAT Communication Unit 3G3AX-RX-ECT

This is the communication unit to connect the High-function General-purpose Inverters RX-series V1 type to EtherCAT network. This communication unit passed the conformance test of EtherCAT.

- Note:** 1. It is not possible to use a EtherCAT Communication Unit 3G3AX-RX-ECT with a RX-series (Model without "-V1").
 2. Sysmac Studio version 1.03 or higher is required. Sysmac Studio can be used when using with NJ-series Controller.

Common Specifications

Item		Specifications
Power supply		Supplied from the inverter
Protective structure		Open type (IP20)
Ambient operating temperature		-10 to 50°C
Ambient storage temperature		-20 to 65°C
Ambient operating humidity		20% to 90% RH (with no condensation)
Vibration resistance		5.9 m/s ² (0.6 G), 10 to 55 Hz
Application environment		At a maximum altitude of 1,000 m (without corrosive gases or dust)
Weight		100 g max. (Shipping weight: approx. 200 g)
International standard	UL/cUL	UL508C
	EC Directives	EMC Directive : EN61800-3 Low Voltage Directive : EN61800-5-1

Vision System FH-Series

Easier to Embed in Machine, Shorter Machine cycle Times

- Calculations are easy to set for the results from four parallel tasks.
- Synchronous control of devices connected via EtherCAT is possible.
- The new Shape Search III processing item enables fast, precise, and stable measurements.
- Microsoft® .NET is supported to share machine interface with PC.
- User interface customization is supported.

System configuration

EtherCAT connections for FH series

Example of the FH Sensor Controllers (4-camera type)

*1. To use STP (shielded twisted-pair) cable of category 5 or higher with double shielding (braiding and aluminum foil tape) for EtherCAT and RJ45 connector.
*2. To use STP (shielded twisted-pair) cable of category 5 or higher for Ethernet and RJ45 connector.

Ratings and Specifications (LCD Monitor, Cable)

LCD Monitor

Model	FZ-M08
Size	8.4 inches
Type	Liquid crystal color TFT
Resolution	1,024 × 768 dots
Input signal	Analog RGB video input, 1 channel
Power supply voltage	21.6 to 26.4 VDC
Current consumption	Approx. 0.7 A max.
Ambient temperature range	Operating: 0 to 50 °C; Storage: -25 to 65 °C (with no icing or condensation)
Ambient humidity range	Operating and storage: 35 to 85% (with no condensation)
Weight	Approx. 1.2 kg
Accessories	Instruction Sheet and 4 mounting brackets

Cable Extension Unit

Model	FZ-VSJ
Power supply voltage *1	11.5 to 13.5 VDC
Current consumption *2	1.5 A max.
Ambient temperature range	Operating: 0 to 50 °C; Storage: -25 to 65 °C (with no icing or condensation)
Ambient humidity range	Operating and storage: 35 to 85% (with no condensation)
Maximum Units connectable	2 Units per Camera
Weight	Approx. 240 g
Accessories	Instruction Sheet and 4 mounting screws

*1 A 12-VDC power supply must be provided to the Cable Extension Unit when connecting the Intelligent Camera, the Autofocus Camera, the Intelligent Compact Camera, the Strobe Controller, or the Lighting Controller.

*2 The current consumption shows when connecting the Cable Extension Unit to an external power supply.

EtherCAT Communications Specifications

Item	Specifications	
Communications standard	IEC61158 Type 12	
Physical layer	100 BASE-TX (IEEE802.3)	
Modulation	Base band	
Baud rate	100 Mbps	
Topology	Depends on the specifications of the EtherCAT master.	
Transmission Media	Twisted-pair cable of category 5 or higher (double-shielded straight cable with aluminum tape and braiding)	
Transmission Distance	Distance between nodes: 100 m or less	
Node address setting	00 to 9	
External connection terminals	RJ45 × 2 (shielded) IN: EtherCAT input data, OUT: EtherCAT output data	
Send/receive PDO data sizes	Input	56 to 280 bytes/line (including input data, status, and unused areas) Up to 8 lines can be set. *
	Output	28 bytes/line (including output data and unused areas) Up to 8 lines can be set. *
Mailbox data size	Input	512 bytes
	Output	512 bytes
Mailbox	Emergency messages, SDO requests, and SDO information	
Refreshing methods	I/O-synchronized refreshing (DC)	

* This depends on the upper limit of the master.

	Name	Description
A	SD memory card installation connector	Install the SD memory card. Do not plug or unplug the SD card during measurement operation. Otherwise measurement time may be affected or data may be destroyed.
B	EtherNet connector	Connect an EtherNet device.
C	USB connector	Connect a USB device. Do not plug or unplug it during measurement operation. Otherwise measurement time may be affected or data may be destroyed.
D	RS-232C connector	Connect an external device such as a programmable controller.
E	DVI-I connector	Connect a monitor.
F	I/O connector (control lines, data lines)	Connect the controller to external devices such as a sync sensor and PLC.
G	EtherCAT address setup volume	Used to set a node address (00 to 99) as an EtherCAT communication device.
H	EtherCAT communication connector (IN)	Connect the opposed EtherCAT device.
I	EtherCAT communication connector (OUT)	Connect the opposed EtherCAT device.
J	Encoder connector	Connect an encoder.
K	Camera connector	Connect cameras.
L	Power supply terminal connector	Connect a DC power supply. Wire the controller independently on other devices. Wire the ground line. Be sure to ground the controller alone. Perform wiring using the attached power supply connector.

Processing Items

Group	Icon	Processing Item	Corresponding Page in the Catalog
Inspections / Measurement		Search Used to identify the shapes and calculate the position of measurement objects.	P16
		Flexible Search Recognizing the shapes of workpieces with variation and detecting their positions.	P16
		Sensitive Search Search a small difference by dividing the search model in detail, and calculating the correlation.	P16
		ECM Search Used to search the similar part of model form input image. Detect the evaluation value and position.	P16
		EC Circle Search Extract circles using "round " shape information and get position, radius and quantity in high preciseness.	P16
		Shape Search II Used to search the similar part of model from input image regardless of environmental changes. Detect the evaluation value and position.	P16
		Shape Search III Robust detection of positions is possible at high-speed and with high precision incorporating environmental fluctuations, such as differences in individual shapes of the workpieces, pose fluctuations, noise superimposition and shielding.	P16
		EC Corner This processing item measures a corner position (corner) of a workpiece.	P16
		Ec Cross The center position of a crosshair shape is measured using the lines created by the edge information on each side of the crosshair.	P16
		Classification Used when various kinds of products on the assembly line need to be sorted and identified.	P17
		Edge Position Measure position of measurement objects according to the color change in measurement area.	P16
		Edge Pitch Detect edges by color change in measurement area. Used for calculating number of pins of IC and connectors.	P16
		Scan Edge Position Measure peak/bottom edge position of workpieces according to the color change in separated measurement area.	P16
		Scan Edge Width Measure max/min/average width of workpieces according to the color change in separated measurement area.	P16
		Circular Scan Edge Position Measure center axis, diameter and radius of circular workpieces.	P16
		Circular Scan Edge Width Measure center axis, width and thickness of ring workpieces.	P16
		Intersection Calculate approximate lines from the edge information on two sides of a square workpiece to measure the angle formed at the intersection of the two lines.	P16
		Color Data Used for detecting presence and mixed varieties of products by using color average and deviation.	P17
		Gravity and Area Used to measure area, center of gravity of workpieces by extracting the color to be measured.	P17
		Labeling Used to measure number, area and gravity of workpieces by extracting registered color.	P17
		Label Data Selecting one region of extracted Labeling, and get that measurement. Area and Gravity position can be got and judged.	
		Defect Used for appearance measurement of plain-color measurement objects such as defects, stains and burrs.	P17
		Precise Defect Check the defect on the object. Parameters for extraction defect can be set precisely.	P17
		Fine Matching Difference can be detected by overlapping and comparing (matching) registered fine images with input images.	P16
		Character Inspect Recognize character according correlation search with model image registered in [Model Dictionary].	P17
		Date Verification Reading character string is verified with internal date.	P17
		Model Dictionary Register character pattern as dictionary. The pattern is used in [Character Inspection].	
		2DCode *2 Recognize 2D code and display where the code quality is poor.	P17
		Barcode *1 Recognize barcode, verify and output decoded characters.	P17
		Circle Angle Used for calculating angle of inclination of circular measurement objects.	P17
		Glue Bead Inspection You can inspect coating of a specified color for gaps or runoffs along the coating path.	P17
	Image Capturing		To input images from cameras. And set up the conditions to input images from cameras. (For FZ5 Sensor Controllers only)
		To input images from cameras. And set up the conditions to input images from cameras. (For FH Sensor Controllers only)	

Group	Icon	Processing Item	Corresponding Page in the Catalog
Image Capturing		Camera Image Input HDR Create high-dynamic range images by acquiring several images with different conditions.	
		Camera Image Input HDR Lite HDR function for FZ-SQ Intelligent Compact Cameras.	
		Camera Switch To switch the cameras used for measurement. Not input images from cameras again.	
		Measurement Image Switching To switch the images used for measurement. Not input images from camera again.	
		Position Compensation Used when positions are differed. Correct measurement is performed by correcting position of input images.	P18
		Filtering Used for processing images input from cameras in order to make them easier to be measured.	P18
		Background Suppression To enhance contrast of images by extracting color in specified brightness.	P18
		Brightness Correct Filter Track brightness change of entire screen and remove gradual brightness change such as uneven brightness.	P18
		Color Gray Filter Color image is converted into monochrome images to emphasize specific color.	P18
		Extract Color Filter Convert color image to color extracted image or binary image.	P18
Correcting images		Anti Color Shading To remove the irregular color/pattern by uniformizing max.2 specified colors.	P18
		Stripes Removal Filter II Remove the background pattern of vertical, horizontal and diagonal stripes.	P18
		Polar Transformation Rectify the image by polar transformation. Useful for OCR or pattern inspection printed on circle.	P18
		Trapezoidal Correction Rectify the trapezoidal deformed image.	P18
		Machine Simulator How the alignment marks would move on the image when each stage or robot axis is controlled can be checked.	
		Image Subtraction The registered model image and measurement image are compared and only the different pixels are extracted and converted to an image.	
		Advanced filter Process the images acquired from cameras in order to make them easier to measure. This processing item consolidates existing image conversion filtering into one processing item and adds extra functions.	P19
		Panorama Combine multiple image to create one big image.	P18
		Macro Advanced arithmetic processing can be easily incorporated into workflow as macro processing items.	P20
		Macro Calculation This function is convenient when the user wants to calculate a value using an original calculation formula or change the set value or system data of a processing item.	P20
Assisting inspections / measurement		Calculation Used when using the judge results and measured values of Procltem which are registered in processing units.	
		Line Regression Used for calculating regression line from plural measurement coordinate.	
		Circle Regression Used for calculating regression circle from plural measurement coordinate.	
		Precise Calibration Used for calibration corresponding to trapezoidal distortion and lens distortion.	P15
		User Data Used for setting of the data that can be used as common constants and variables in scene group data.	P21
		Set Unit Data Used to change the Procltem data (setting parameters, etc.) that has been set up in a scene.	
		Get Unit Data Used to get one data (measured results, setting parameters, etc.) of Procltem that has been set up in a scene.	
		Set Unit Figure Used for re-setting the figure data (model, measurement area) registered in an unit.	
		Get Unit Figure Used for get the figure data (model, measurement area) registered in an unit.	
		Trend Monitor Used for displaying the information about results on the monitor, facilitating to avoid NG and analyze causes.	P21
	Image Logging Used for saving the measurement images to the memory and USB memory.		
	Image Conversion Logging Used for saving the measurement images in JPEG and BMP format.		
	Data Logging Used for saving the measurement data to the memory and USB memory.		
	Elapsed Time Used for calculating the elapsed time since the measurement trigger input.

		Parallelize *3	A part of the measurement flow is divided into two or more tasks and processed in parallel to shorten the measurement time. This processing item is placed at the top of processing to be performed in parallel.	
		Parallelize Task *3	A part of the measurement flow is divided into two or more tasks and processed in parallel to shorten the measurement time. This processing item is placed immediately before processing to be performed in parallel between Parallelize and Parallelize End.	
		Statistics	Used when you need to calculate an average of multiple measurement results.	
		Reference Calib Data	Calibration data and distortion compensation data held under other processing items can be referenced.	
		Position Data Calculation	The specified position angle is calculated from the measured positions.	P14
		Stage Data	Sets and stores data related to stages.	
		Robot Data	Sets and stores data related to robots.	
		Vision Master Calibration	This processing item automatically calculates the entire axis movement amount of the control equipment necessary for calibration.	P15
		PLC Master Calibration	Calibration data is created using a communication command from PLC.	P15
		Convert Position Data	The position angle after the specified axis movement is calculated.	P14
		Movement Single Position	The axis movement that is required to match the measured position angle to the reference position angle is calculated.	P14
		Movement Multi Points	The axis movements that are required to match the measured position angles to the corresponding reference position angles are calculated.	P14
		Detection Point	Obtains position/angle information by referring to the coordinate values measured with the Measurement Processing Unit.	
		Camera Calibration	By setting the camera calibration, the measurement result can be converted and output as actual dimensions.	P15
		Data Save	The set data can be saved in the controller main unit or as scene data. The data is held even after the FH/FZ power is turned off.

Branching processing		Conditional Branch	Used where more than two kinds of products on the production line need to be detected separately.
		End	This Proclitem must be set up as the last processing unit of a branch.
		DI Branch	Same as Proclitem "Branch". But you can change the targets of conditional branching via external inputs.
		Control Flow Normal	Set the measurement flow processing into the wait state in which the specific no-protocol command can be executed.
		Control Flow PLC Link	Set the measurement flow processing into the wait state in which the specific PLC Link command can be executed.
		Control Flow Parallel	Set the measurement flow processing into the wait state in which the specific parallel command can be executed.
		Control Flow Fieldbus	Set the measurement flow processing into the wait state in which the specific Fieldbus command can be executed.
Outputting results		Selective Branch	Easily branch to multiple destinations.
		Data Output	Used when you need to output data to the external devices such as PLC or PC via serial ports.
		Parallel Data Output	Used when you need to output data to the external devices such as PLC or PC via parallel ports.
		Parallel Judgement Output	Used when you need to output judgement results to the external devices such as PLC or PC via parallel ports.
Displaying results on the monitor		Fieldbus Data Output	Outputs data to an external device, such as a Programmable Controller, through a fieldbus interface.
		Result Display	Used for displaying the texts or the figures in the camera image.
		Display Image File	Display selected image file.
		Display Last NG Image	Display the last NG images.

Smart Camera FQ-M-Series

Designed for motion tracking

- Connectivity with EtherCAT/Ethernet
- Up to 5000 pieces per minute with 360 degree rotation*
- Vision sensor with encoder input for tracking function
- Calibration function of the complete system
- Flexible data output depending on the output devices

* The processing speed depends on setting conditions.

System configuration

EtherCAT connections

* Sysmac Studio and Touch Finder can not be used together. When both are connected, Sysmac Studio will have a priority.
When you make Machine Automation Controller NJ-series settings with the Sysmac Studio Standard Edition, connect a computer and the NJ via a USB connection or an Ethernet network.

- Note:**
1. EtherCAT and Ethernet (PLC Link) can not be used simultaneously.
 2. It is not possible to configure and adjust the FQ-M via an NJ-series controller, when they are connected via an EtherCAT network. For configuration and adjustment of FQ-M, connect the FQ-M and a computer or a Touch Finder via an Ethernet network.

(9)	Strobe controller connection holes	Install the strobe controller in this part. FL-TCC1 can be mounted.	
(10)	Measurement process Operation indicators	OR	Lit in orange while OR signal is ON.
		ETN	Lit in orange while in Ethernet communications.
		ERROR	Lit in red when an error occurs.
		BUSY	Lit in green while the sensor is processing.
(11)	EtherCAT Operation indicators	L/A IN	Lit in green when Link with EtherCAT device is established and flickers in green when communicating (data IN).
		L/A OUT	Lit in green when Link with EtherCAT device is established and flickers in green when communicating (data OUT).
		ECAT RUN	Lit in green when EtherCAT communication is available.
		ECAT ERROR	Lit in red when an EtherCAT communications error occurs.

* FQ-MS□□□-ECT and FQ-MS□□□-M-ECT only.

Touch Finder

No.	Name	Description	
(1)	Operation indicators	POWER	Lights green when the Touch Finder is turned ON.
		ERROR	Lights red when an error occurs.
		SD ACCESS	Lights yellow when an SD card is inserted. Flashes yellow when the SD card is being accessed.
		CHARGE *	Lights orange when the Battery is charging.
(2)	LCD/touch panel	Displays the setting menu, measurement results, and images input by the camera.	
(3)	SD card slot	An SD card can be inserted.	
(4)	Battery cover *	The Battery is inserted behind this cover. Remove the cover when mounting or removing the Battery.	
(5)	Power supply switch	The Battery is inserted behind this cover. Remove the cover when mounting or removing the Battery.	

No.	Name	Description
(6)	Touch pen holder	The touch pen can be stored here when it is not being used.
(7)	Touch pen	Used to operate the touch panel.
(8)	DC power supply connector	Used to connect a DC power supply.
(9)	Slider	Used to mount the Touch Finder to a DIN Track.
(10)	Ethernet port	Used when connecting the Touch Finder to the Sensor with an Ethernet cable. Insert the connector until it locks in place.
(11)	Strap holder	This is a holder for attaching the strap.
(12)	AC power supply connector *	Used to connect the AC adapter.

* Applicable to the FQ-MD31 only.

Optical Chart

Meaning of Optical Chart

The X axis of the optical chart shows the field of vision (mm) *1,
and the Y axis of the optical chart shows the camera installation distance (mm).*2

*1. The lengths of the fields of vision given in the optical charts are the lengths of the Y axis.
*2. The vertical axis represents WD for small cameras.

Displacement Sensor ZW-Series

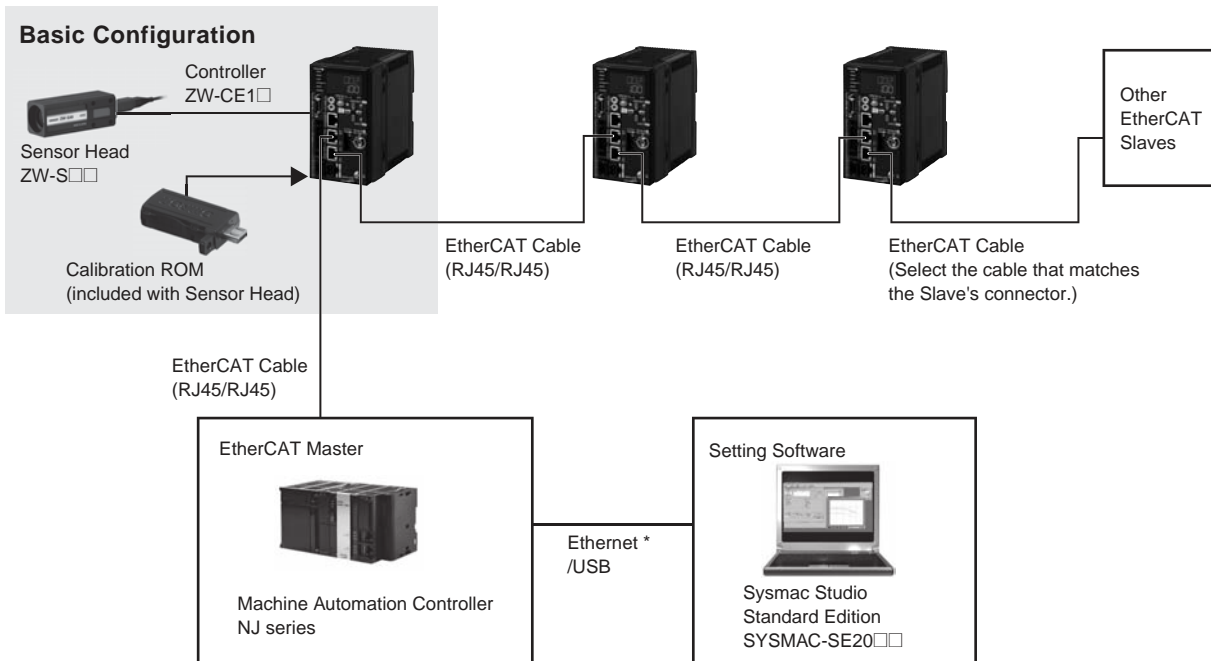

Non-contact measurement of height and position with high precision. Uses the new "White Light Confocal Principle".

- Ultra-compact and ultra-light sensor head
- Stable measurement of any material and superior angle characteristics
- Sensor head with excellent environmental resistance, no noise, and zero heat generation

System configuration

EtherCAT connections

- * Prepare commercially available Ethernet cable satisfying the following requirements:
- Category 5e or more, 30 m or less
 - RJ45 connector (8-pin modular jack)
 - For direct connection: Select cross cable.
 - For connection through an industrial switching hub: Select straight cable.

Connect Fiber Sensors and Laser Sensors to EtherCAT at Low Initial Cost.

- Consists of Sensor communications unit with master function + Distributed Sensor Unit with slave function
- Communication between units is by OMRON's unique DS-Bus
- Also supports feedback control with the fastest communication speed in the industry*
- Sensor functions such as present value monitoring, setting changes, and batch tuning are controlled by EtherCAT

* As of February 2013, based on OMRON research

System Configuration

*1 The DS-Bus is an OMRON inter-Unit network communications protocol that connects the E3NW-ECT Sensor Communications Unit and E3NW-DS Distributed Sensor Units.

*2 You can connect up to 30 Sensors total to the Sensor Communications Unit and Distributed Sensor Units.

Sensor Communications Unit

E3NW

The Next-generation Sensor Networking Units That Revolutionizes the Workplace from Introduction and Startup though Operation

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

- Low initial cost achieved by distributed placement with the Sensor Communications Unit and Distributed Sensor Units (patent pending).
- Programless transmission of ON/OFF signals and detected quantities to host PLC (PDO communications).
- Reading and writing threshold values and function settings, tuning, and other operations are possible (SDO communications).
- Wire saving: simply connect the communications cable and power cable, and slide the Amplifier Units from the side.
- Up to 30 Sensor Amplifier Units can be connected. (total number of Sensor Amplifier Units: 30, number of Sensor Amplifier Units for one Sensor Communications Unit: 30, number of Sensor Amplifier Units for one Distributed Sensor Unit: 10)

The Advanced Fiber Sensor That Handles On-site Needs

- Improved basic performance with 1.5 times the sensing distance and approx. 1/10th the minimum sensing object.*
- Ultra-easy setup with Smart Tuning with a dynamic range expanded 20 times to 40,000:1. Optimum stable detection achieved with light level adjustment even for saturated incident light.
- White on black display characters for high visibility.
- Solution Viewer that shows the passing time and difference in incident levels and Change Finder that shows even high-speed workpieces to achieve simple settings and reliable detection.

E3NC-SA0

A Ultra-compact CMOS Laser Sensor for Stable Detection without the Influence of Workpiece Color, Material, or Surface Conditions

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

- Dynamic range of 500,000 times for stable detection without influence from changes in workpieces.
- The industry's smallest CMOS laser head* for installation into small spaces.
- Distance discrimination enables stable detection of level differences as small as 1.5 mm.
- Robot cable for reliable application in adverse environments and IP67 protection.
- Laser Class 1 for safe application.
- White on black display characters for high visibility.
- Smart Tuning to achieve stable detection with easy setup.

Amplifier Unit with Connector for Sensor Communications Unit

E3NC-SA0

Fiber Sensors/Laser Photoelectric Sensor/Proximity Sensor

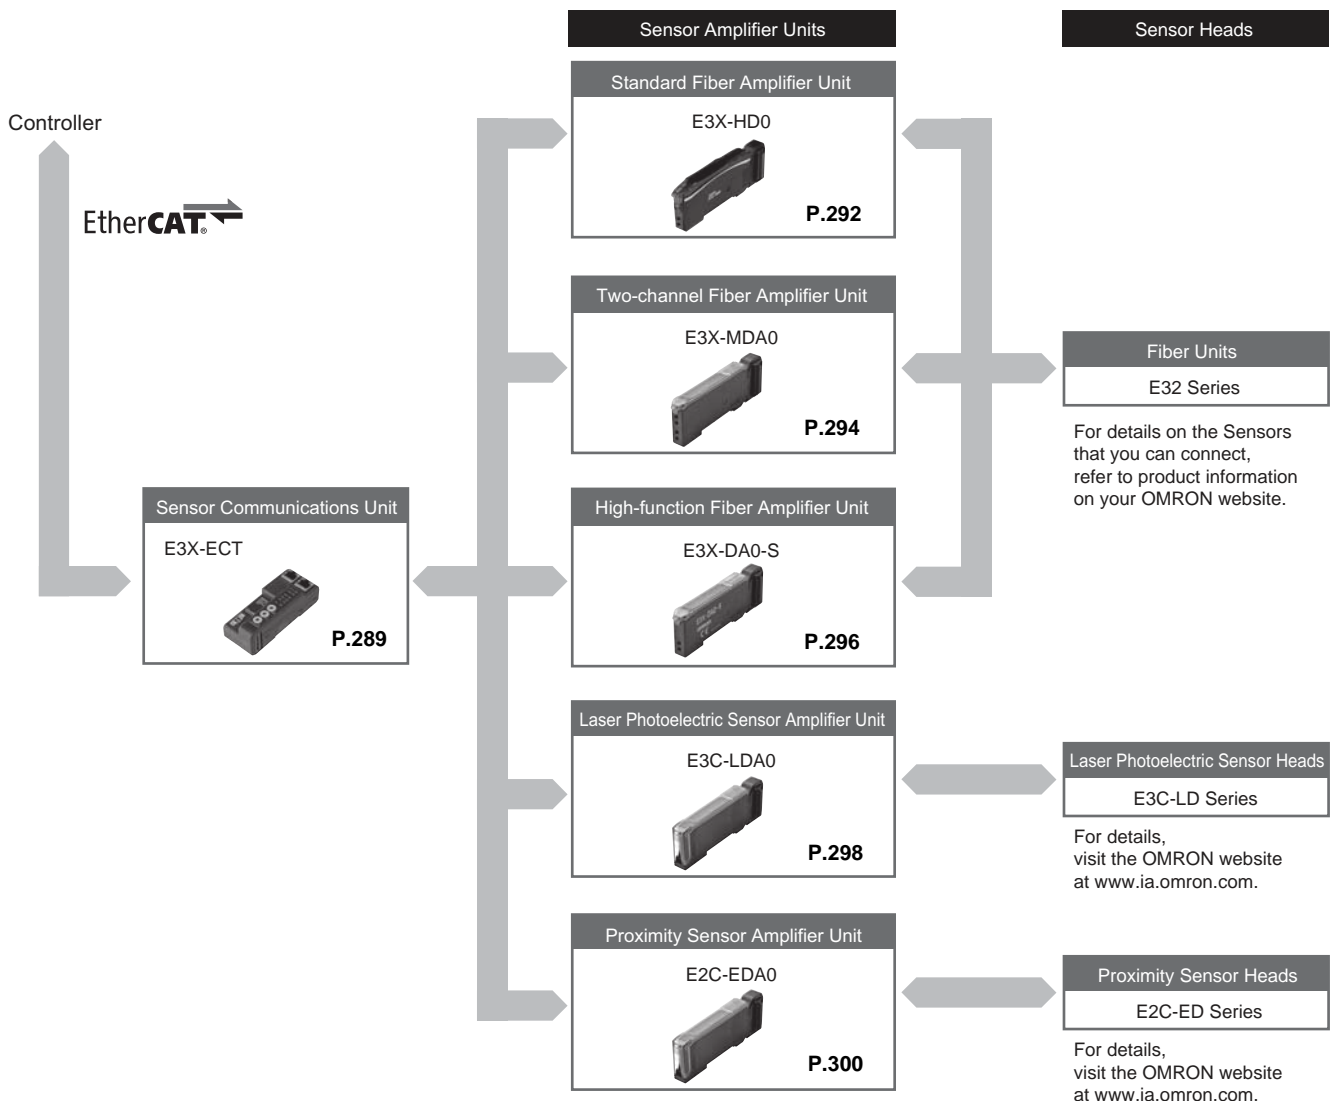

E3X/E3C-LDA/E2C-EDA Communication unit connection series

Easily connect fiber sensors, laser photoelectric sensors, and proximity sensors to EtherCAT

- Ultra high-speed communication of sensor output
- Sensor functions such as reading present values, changing settings and tuning are controlled by EtherCAT
- Up to 30 amplifiers can be connected

System Configuration

Sensor Communications Unit

E3X-ECT

EtherCAT communication unit makes it easy to manage sensor settings

- Programless transmission of ON/OFF signals and detected quantities to host PLC (PDO communications).
- Reading and writing threshold values and function settings, teaching, and other operations are possible (SDO communications).
- Wire saving: simply connect the communications cable and power cable, and slide the Amplifier Units from the side.
- Up to 30 Sensor Amplifier Units can be connected.

Two-channel Fiber Amplifier Unit

E3X-MDA0

Two-channel fiber amplifier on one unit

- Features a Power Tuning function that optimizes light reception at the press of a button.
- Combines newly developed 4-element LEDs with an APC circuit to ensure stable, long-term LED performance.
- 2-channel models achieve the thinnest profile in the industry, at only 5 mm per channel. (According to July 2012)
- 2-channel models also offer AND/OR control output.

An Extensive of Standard Functions to Support the World's Highest Level of Stable Detection

- "GIGA RAY" Giga Power Lighting Element to create a wide variety of value.
- Power turning to easily set the optimum light level.
- Active Threshold Control (ATC) reduces incorrect operation due to dust, oil, or other influences.
- Automatic Power Control (APC) is always enabled to stabilize emitter power with high accuracy.

General Specifications

Item	Specifications	
Model	E3X-DA0-S	
Connection method	Connector for Sensor Communications Unit	
Light source (wavelength)	Red, 4-element LED (625 nm)	
Power supply voltage	12 to 24 VDC \pm 10%, ripple (P-P) 10% max.	
Power consumption	Normal mode: 960 mW max. (Current consumption: 40 mA max. at 24 VDC, 80 mA max. at 12 VDC) Power saving ECO1: 720 mW max. (Current consumption: 30 mA max. at 24 VDC, 60 mA max. at 12 VDC) Power saving ECO2: 600 mW max. (Current consumption: 25 mA max. at 24 VDC, 50 mA max. at 12 VDC)	
Protection circuits	Power supply reverse polarity protection, output short-circuit protection and output reverse polarity protection	
Response time	High-speed mode	Operate or reset: 250 μ s
	Standard mode	Operate or reset: 1 ms
	High-resolution mode	Operate or reset: 4 ms
	Tough mode	Operate or reset: 16 ms
No. of Units for mutual interference prevention	Possible for up to 10 units	
Auto power control (APC)	Always ON	
Other functions	Power tuning, differential detection, timer (OFF-delay, ON-delay, One-shot, or ON-delay + OFF-delay timer), zero re-set, resetting settings, Eco Mode and output setting (output for each channel, area output, or self-diagnosis)	
Ambient Illumination (Receiver side)	Incandescent lamp: 10,000 lux max., Sunlight: 20,000 lux max.	
Maximum connectable Units	with E3X-ECT: 30 units (Number of connectable amplifiers)	
Ambient temperature range	Operating: Groups of 1 to 2 Amplifiers: 0 to 55 °C Groups of 3 to 10 Amplifiers: 0 to 50 °C Groups of 11 to 16 Amplifiers: 0 to 45 °C Groups of 17 to 30 Amplifiers: 0 to 40 °C Storage: -30 to 70 °C (with no icing or condensation)	
Ambient humidity range	Operating and storage: 35% to 85% (with no condensation)	
Insulation resistance	20 M Ω min. (at 500 VDC)	
Dielectric strength	1,000 VAC at 50/60 Hz for 1 minute	
Vibration resistance	Destruction: 10 to 150 Hz with a 0.7-mm double amplitude for 80 minutes each in X, Y and Z directions	
Shock resistance	Destruction: 150 m/s ² , for 3 times each in X, Y, and Z directions	
Degree of protection	IEC 60529 IP50 (with Protective Cover attached)	
Weight (packed state)	Approx. 55 g	
Materials	Case	Polybutylene terephthalate (PBT)
	Cover	Polycarbonate (PC)
Accessories	Instruction Manual	

* The rated sensing distance is approximately 1/2 and the incident level is approximately 1/3 of the normal levels when ECO mode is enabled.

Proximity Sensor Amplifier Unit

E2C-EDA0

Proximity Sensor with Separate Amplifier Enables Easily Making High-precision Sensitivity Settings

- Wide variety of Sensor Heads to select according to the application. The Sensor Heads use flexible cable.
- High resistance to changes in ambient temperature. Temperature characteristics of 0.08%/°C (for 5.4-dia. models).
- Make simple and reliable detection settings with micronlevel precision using the teaching function.
- Check the sensing excess gain level on the digital display.
- Support for high-precision positioning and screening with fine positioning to maximize variations.

GX-Series

Realizes high-speed communication to match a variety of applications

- **Digital I/O Terminals**

Inputs/Outputs the digital ON/OFF signals.

- **Analog I/O Terminals**

Inputs/Outputs the analog signal of 0-5V or 4-20mA, etc., and executes A/D or D/A conversion.

- **Encoder Input Terminal**

Performs conversion for pulse input signals from an encoder.

- **Expansion Units**

Attached to the Digital I/O Unit to expands the I/O points.

Can be attached to a two-tier terminal block type with 16 inputs, 16 outputs, and 16 relay outputs.

General Specifications

It is common specifications of EtherCAT Remote I/O Terminal GX-Series. Refer to the pages of specifications for individual I/O terminals for details.

Item	Specification
Unit power supply voltage	20.4 to 26.4 VDC (24 VDC -15% to +10%)
I/O power supply voltage	20.4 to 26.4 VDC (24 VDC -15% to +10%)
Noise resistance	Conforms to IEC 61000-4-4, 2 kV (power line)
Vibration resistance	Malfunction 10 to 60 Hz with amplitude of 0.7 mm, 60 to 150Hz and 50 m/s ² in X, Y, and Z directions for 80 minutes <Relay Output Unit GX-OC1601 only> 10 to 55 Hz with double-amplitude of 0.7 mm
Impact resistance	150 m/s ² with amplitude of 0.7 mm <Relay Output Unit GX-OC1601 only> 100 m/s ² (3 times each in 6 directions on 3 axes)
Dielectric strength	600 VAC (between isolated circuits)
Isolation resistance	20 MΩ or more (between isolated circuits)
Ambient operating temperature	-10 to 55 °C
Operating humidity	25% to 85% (with no condensation)
Operating atmosphere	No corrosive gases
Storage temperature	-25 to 65 °C
Storage humidity	25% to 85% (with no condensation)
Terminal block screws tightening torque *	M3 wiring screws: 0.5 N•m M3 terminal block mounting screws: 0.5 N•m
Mounting method	35-mm DIN track mounting

* Applicable only to 2-tier terminal block and 3-tier terminal block type slaves.

GX-□D16□1/OC1601

High-speed digital I/O terminal with the screw type terminal block for EtherCAT communications

- Detachable screw terminal block facilitates the maintenance.
- The expansion unit can be connected.
(One expansion unit per one I/O terminal unit.)
Input/output point can be flexibly increased depending on the system.
- Input response time can be switched for high-speed processing.
- Selectable node address setting methods: setting with rotary switch and with tool software.
When setting the nodes with rotary switch, setting is easy and node identification becomes possible for maintenance.

Expansion Units

One Expansion Unit can be combined with one Digital I/O Terminal (GX-ID16□1/OD16□1/OC1601). The following Expansion Units are available. They can be combined in various ways for flexible I/O capacity expansion.

Model	I/O points	Input capacity	Output capacity
XWT-ID08	8 DC inputs (NPN)	8	0
XWT-ID08-1	8 DC inputs (PNP)	8	0
XWT-OD08	8 transistor outputs (NPN)	0	8
XWT-OD08-1	8 transistor outputs (PNP)	0	8
XWT-ID16	16 DC inputs (NPN)	16	0
XWT-ID16-1	16 DC inputs (PNP)	16	0
XWT-OD16	16 transistor outputs (NPN)	0	16
XWT-OD16-1	16 transistor outputs (PNP)	0	16

Note: For the I/O power supply current value to V and G terminals, refer to GX Series Operation Manual (Cat. No. W488).

Precautions for Correct Use

- With a current of between 2 and 3 A (8 to 10 A per common), either ensure that the number of points per common that simultaneously turn ON does not exceed 4 or ensure that the ambient temperature does not exceed 45 °C. Also, there are no restrictions if the current does not exceed 2 A (8 A per common).
- The rated current is the value for assuring normal operation, and not for assuring durability of the relays. The relay service life depends greatly on factors such as the operating temperature, the type of load, and switching conditions. The actual equipment must be checked under actual operating conditions.

Digital I/O Terminal 3-tier Terminal Block Type

GX-ID16□2/OD16□2/MD16□2

A common terminal is provided for each contact.

It eliminates the need for relay terminal blocks

- It is unnecessary to share the common terminal among multiple contacts.
Easy-to-find wiring locations.
- Detachable screw terminal block facilitates the maintenance.
- Input response time can be switched for high-speed processing.
- Selectable node address setting methods: setting with rotary switch and with tool software.
When setting the nodes with rotary switch, setting is easy and node identification becomes possible for maintenance.

Digital I/O Terminal e-CON Connector Type

GX-□D16□8/□D32□8

**Easy wiring using industry standard e-CON connectors.
Special wiring tool is not necessary**

- Digital I/O terminal with industry standard e-CON connectors.
- A common terminal is provided for each connector.
The I/O terminal and the sensors can be connected directly.
- Input response time can be switched for high-speed processing.
- Selectable node address setting methods: setting with rotary switch and with tool software.
When setting the nodes with rotary switch, setting is easy and node identification becomes possible for maintenance.

Analog I/O Terminal 2-tier Terminal Block Type

GX-AD0471/DA0271

Analog I/O terminal with screw terminal block for EtherCAT communications

- The input/output range can be easily changed by the setting with the switch.
- Detachable screw terminal block facilitates the maintenance.
- Moving average calculation function.
Settings within the range of 100 μ s-64ms. (For input only.)
- Disconnection detection function.
(For input only and for usage with 1-5V or 4-20mA ranges.)
- Selectable node address setting methods: setting with rotary switch and with tool software.
When setting the nodes with rotary switch, setting is easy and node identification becomes possible for maintenance.

Input Section Specifications

4-point Input Terminals

Item	Specification	
	Voltage input	Current input
Input capacity	4 points (possible to set number of enabled channels)	
Input range	0 to 5V 1 to 5V 0 to 10V -10 to +10V	4 to 20mA
Input range setting method	Input range switch: Common to input CH1/CH2, common to input CH3/CH4 SDO communication: Possible to set input CH1 to CH4 individually	
Maximum signal input	± 15 V	± 30 mA
Input impedance	1 M Ω min.	Approx. 250 Ω
Resolution	1/8000 (full scale)	
Overall accuracy	25 $^{\circ}$ C	$\pm 0.3\%$ FS
	-10 to +55 $^{\circ}$ C	$\pm 0.6\%$ FS
Resolution	1/8000 (full scale)	
Analog conversion cycle	500 μ s/input When 4 points are used: 2 ms max.	
A/D converted data	Other than ± 10 V: 0000 to 1F40 Hex full scale (0 to 8000) ± 10 V: F060 to 0FA0 Hex full scale (-4000 to +4000) A/D conversion range: $\pm 5\%$ FS of the above data ranges.	
Isolation method	Photocoupler isolation (between input and communications lines) No isolation between input signals	
Unit power supply current consumption	120 mA max. (for 20.4 to 26.4-VDC power supply voltage)	
Weight	180 g max.	
Accessories	Four short-circuit metal fixtures (for current input) *	

* Short-circuit metal fixtures are used for current input only, but store in a safe place when using for voltage inputs as well.

4-points Analog Inputs Terminal GX-AD0471

No.	Name	Function
1	Communications connector	(CN IN) Connects the communications cable which comes from the Master Unit side. (CN OUT) Connects the communications cable of the next I/O terminal.
2	Unit Power Supply Connector	Connect the unit power supply (24 VDC).
3	Status indicator	It indicates the communication state and the operation state of I/O terminals.
4	Node address Switch	It sets node addresses of terminals (decimal). Setting range is 00 to 99.
5	Input range switch	DIP switch for setting input range.
6	Terminal Block	Terminal block for analog input signals V1 to V4: Voltage input terminals I1 to I4: Current input terminals AG: Analog GND NC: Not used
7	DIN track mounting hook	Fixes a slave to a DIN track.

EtherCAT-compatible encoder input terminal which enables high-speed and accurate control

- Two counter function available. Pulse count within 32 bit range.
- Maximum input pulse frequency of 4MHz (Line driver input after quadrature). High-speed network EtherCAT enables high-speed and accurate control.
- Selectable two input types: Open collector input and line driver input.
- Built-in two external latch inputs and one reset input .
- Selectable node address settings: setting with rotary switches and setting on tool software.
- Detachable screw terminal will facilitate the maintenance work.

International Standards

- The standards are abbreviated as follows: U: UL, U1: UL (Class I Division 2 Products for Hazardous Locations), C: CSA, UC: cULus, UC1: cULus (Class I Division 2 Products for Hazardous Locations), CU: cUL, N: NK, KC: KC Registration
L: Lloyd, and CE: EC Directives.
- Contact your OMRON representative for further details and applicable conditions for these standards.

● EC Directives

The EC Directives applicable to PLCs include the EMC Directives and the Low Voltage Directive. OMRON complies with these directives as described below.

● EMC Directives

Applicable Standards

EMI: EN61000-6-4, EN61131-2

EMS: EN61000-6-2, EN61131-2

PLCs are electrical devices that are incorporated in machines and manufacturing installations. OMRON PLCs conform to the related EMC standards so that the devices and machines into which they are built can more easily conform to EMC standards. The actual PLCs have been checked for conformity to EMC standards. Whether these standards are satisfied for the actual system, however, must be checked by the customer.

EMC-related performance will vary depending on the configuration, wiring, and other conditions of the equipment or control panel in which the PLC is installed. The customer must, therefore, perform final checks to confirm that the overall machine or device conforms to EMC standards.

● Low Voltage Directive

Applicable Standard: EN61131-2

VDC must satisfy the appropriate safety requirements. With PLCs, this applies to Power Supply Units and I/O Units that operate in these voltage ranges.

These Units have been designed to conform to EN61131-2, which is the applicable standard for PLCs.

● Conformance to EC Directives

The NJ/NX-series I/O Units conform to the Common Emission Standards (EN 61131-2) of the EMC Directives. However, noise generated by relay output switching may not satisfy these Standards when the Unit is incorporated in to a system.

In such a case, appropriate countermeasures must be provided externally to the Output Unit, such as connecting a contact protection circuit. Countermeasures taken to satisfy the standards vary depending on the devices on the load side, wiring, configuration of machines, etc.

*1. We recommend you to use above cable for EtherCAT and EtherNet/IP, and RJ45 Connector together.

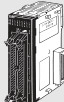

*2. We recommend you to use above cable for EtherCAT and EtherNet/IP, and RJ45 Assembly Connector together.

*3. We recommend you to use above cable For EtherNet/IP and RJ45 Connectors together.

Note: Please be careful while cable processing, for EtherCAT, connectors on both ends should be shield connected and for EtherNet/IP, connectors on only one end should be shield connected.

■ High-speed Counter Unit

Unit classification	Product name	Specifications			No. of unit numbers allocated	Current consumption (A)		Model	Standards
		Countable channels	Encoder A and B inputs, pulse input Z signals	Max. counting rate		5 V	24 V		
CJ1 Special I/O Units	High-speed Counter Unit 	2	Open collector Input voltage: 5 VDC, 12 V, or 24 V (5 V and 12 V are each for one axis only.)	50 kHz	4	0.28	---	CJ1W-CT021	UC1, N, L, CE
			RS-422 line driver	500 kHz					

Note: The following functions become unavailable when it is used with the NJ-Series CPU unit.

- Counter value capture using allocation area(CIO)
- The capture, Stop/capture/continue, Stop/capture/reset/continue, and Capture/reset functions using External Control Input Function
- Pulse rate range control using Output Control Mode
- The pulse rate measurement function
- Because the NJ-Series has no power OFF interrupt task, operation cannot be restarted from the position at which the power was interrupted.
- Read or write the data using IORD/IOWR instruction
- Starting of External Interrupt Task by Output and External Control Input

Serial Communications Units

RS-422A Converter		Converts RS-232C to RS-422A/RS-485.					CJ1W-CIF11	

Note: Simple Backup Function and Interrupt notification function cannot be used.

*1 You can activate protocol macro trace function when the CPU Unit is set to the RUN Mode. (MONITOR Mode is not available with the NJ-Series CPU Units.)

*2 When an NT-AL001 RS-232C/RS-422A Conversion Unit is used, this value increases by 0.15 A/Unit. Add 0.20A/Unit when using NV3W-M□20L Programmable Terminals. Add 0.04A/Unit when using CJ1W-CIF11 RS-422A Adapters.

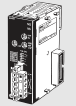

*3 Supported only by the SerialRcvNoClear Instructions with Serial communication unit version 2.1 or later, CPU Units with unit version 1.03 or later and the Sysmac Studio version 1.04 or higher.

Note: Site licenses are available for users who will run Sysmac Studio on multiple computers. Ask your OMRON sales representative for details.

*1. The same media is used for both the Standard Edition and the Vision Edition.

*2. With the Vision Edition, you can use only the setup functions for FQ-M-series and FH-series Vision Sensors.

*3. With the Measurement Sensor Edition, you can use only the setup functions for ZW-series Displacement Sensors.

*4. This product is a license only. You need the Sysmac Studio Standard Edition DVD media to install it.

Components

DVD (SYSMAC-SE200D)

Components	Details
Introduction	An introduction about components, installation/uninstallation, user registration and auto update of the Sysmac Studio is provided.
Setup disk (DVD-ROM)	1

License (SYSMAC-SE2□□L/VE0□□L/ME0□□L)

Components	Details
License agreement	The license agreement gives the usage conditions and warranty for the Sysmac Studio.
License card	A model number, version, license number, and number of licenses are described.
User registration card	Two cards are contained. One is for users in Japan and the other is for users in other countries.

Included Support Software

DVD media of Sysmac Studio includes the following support software.

Included Support Software	Outline
CX-Designer Ver.3.□	The CX-Designer is used to create screens for NS-series PTs.
CX-Integrator Ver.2.□	The CX-Integrator is used to set up FA networks.
CX-Protocol Ver.1.□	The CX-Protocol is used for protocol macros for Serial Communications Units.
Network Configurator Ver.3.□	The Network Configurator is used for tag data links on the built-in EtherNet/IP port.

CX-Compolet

Product name	Specification	Model	Standards
CX-Compolet*1	Software components that can make it easy to create programs for communications between a computer and controllers. This packaged product bundles CX-Compolet and SYSMAC Gateway with 1 license each. Supported execution environment: .NET Framework (1.1, 2.0, 3.0, 3.5 or 4.0) Development environment: Visual Studio .NET*2 / .NET2003/.NET2005/.NET2008/.NET2010 Development languages: Visual Basic .NET, Visual C#.NET, Visual Basic Ver. 5/6*3 Supported communications: Equal to SYSMAC Gateway. 	5 additional licenses (This product provides only additional licenses. The software must be purchased in advance.)	WS02-CPLC1-L5	
	10 additional licenses (This product provides only additional licenses. The software must be purchased in advance.)	WS02-CPLC1-L10	
	Software components only. This package includes CX-Compolet with 1 license. SYSMAC Gateway is not included.	WS02-CPLC2	

Note: Supported only by the CPU Units with unit version 1.01 or later and the CX-Compolet version 1.31 or higher.

*1 One license is required per computer.

*2 Only the components compatible with CX-Compolet version 2003 are supported.

A development environment of .NET 2003 or higher is required for CIP communications.

*3 Only functions provided by SYSMAC Compolet V2 as ActiveX controls are supported for Visual Basic version 5 or 6. (Windows XP only.)

SYSMAC Gateway (Communications Middleware)

Product name	Specification	Model	Standards
SYSMAC Gateway*	Communications middleware for personal computers running Windows. Supports CIP communications and tag data links (EtherNet/IP) in addition to FinsGateway functions. This package includes SYSMAC Gateway with 1 licence. (Fins Gateway is also included.) Supported communications: RS-232C, USB, Controller Link, SYSMAC LINK, Ethernet, EtherNet/IP	WS02-SGWC1	-
	10 additional licenses (This product provides only additional licenses.)	WS02-SGWC1-L	

Note: Supported only by the CPU Units with unit version 1.01 or later and the SYSMAC Gateway version 1.31 or higher.

* One license is required per computer.

Note: 1. Different connectors are used for the motor power and the brake on 100-V and 200-V, 3,000-r/min Servomotors of 50 to 750 W and Servomotors of 6 to 15 kW. When using a Servomotor with a brake, two cables are required: a Power Cable without Brake and a Brake Cable.

2. For non-flexible power cables for Servomotors of 11 or 15 kW, refer to G5 series USER'S MANUAL (Cat.No. I576) and make your own cable.

* Do not use the 0.5-mm, 1.0-mm, and 2.0-mm Extension Tubes attached to each other. Since these Extension Tubes are placed over the threaded section of the Lens or other Extension Tube, the connection may loosen when more than one 0.5-mm, 1.0-mm or 2.0-mm Extension Tube are used together. Reinforcement is required to protect against vibration when Extension Tubes exceeding 30 mm are used.

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

(a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.

(b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See <http://www.omron.com/global/> or contact your Omron representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions.

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.
