

Air Powered Crimp Tool Head Operating Instruction Sheet And Specifications Part No. 64005-0500 Eng. No. AT 5765 (Replaces 19283-0040)

FEATURES

- Quick change tool head for the 19279-0001 (AT-200)
- Tooling kit is interchangeable with other kits in the 64001 and 64003 series
- A precision user-friendly terminal locator wire stop holds terminals in the proper crimping position
- Insulation crimp adjustment allows a precise insulation crimp. To meet or exceed the requirements of UL, CSA and Military Class II
- Pneumatic powered crimp tools help reduce fatigue and discomfort from repetitive manual crimping
- Single color-coded crimp pocket eliminates the possibility of using the wrong pocket

SCOPE

AviKrimp[™] / InsulKrimp[™] Star Rings Tongues Terminals 18-22 AWG. This tool head is intended for use in the 19279-0001 (AT-200) either hand held or with optional bench adapter 19078-0307 (ATBA) and foot switch.

Testing

Mechanical

The tensile test or pull test is a means of evaluating the mechanical properties of the crimped connections. The following charts show the UL specifications for various wire sizes. The tensile strength is shown in pounds and indicates the minimum acceptable force to break or separate the terminal from the conductor.

Wire Size (AWG)	*UL - 486 A
22	8
20	13
18	20

*UL - 486 A - Terminals (Copper conductors only)

Note: Twisting the wire strands prior to crimping or using Hi-Twist wire will provide higher pull force values.

The following is a partial list of the product part numbers and their specifications that this tool is designed to run. We will be adding to this list and an up to date copy is available on www.molex.com.

OPERATION

Refer to the instruction manual for the 19279-0001 (AT-200) for mounting this crimp tool head.

Crimping Terminals

- Adjust the locator up or down until the terminal being run sits flat and straight in the tool.
- 2. Insert the wire into the terminal. Twist the stripped wires before inserting them into the terminal. Push up on the locator blade and push the terminal and wire with the barrel facing up into the color-coded nest with front edge of the barrel against the locator. See Figure 1. Release the locator blade to hold the terminal in position.

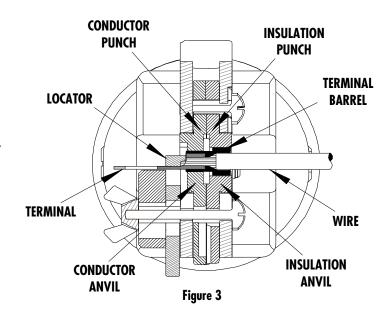

Caution: Never operate this tool without the supplied safety shield in place. Never place fingers in the tool nests.

3. Push on wire to assure it is still fully seated in the terminal. See Figure 2 and 3. Cycle the tool.

Lift the locator blade or wire stop and remove the crimped terminal. Inspect for proper crimp location, and check for insulation closure. Locator is adjustable up and down to keep terminals straight after crimping.

Note: Whenever crimping without the locator, make sure the seam of the terminal is oriented up or down in the tool if using unbrazed product, as this will provide higher pull force values.

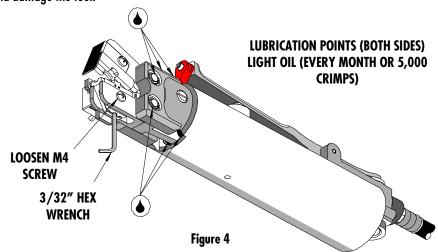

4. If the insulation part of the crimp needs to be adjusted, first disconnect air source and loosen the M4 screw on the bottom tool jaw, then insert a 3/32" hex wrench (supplied) into the bottom of the lower die (See Figure 4). A clockwise (CW) rotation decreases insulation crimp while a counterclockwise (CCW) rotation increases insulation crimp. After adjusting retighten the M4 screw. Reconnect air source.

Maintenance

It is recommended that each operator of the tool be made aware of, and responsible for, the following maintenance steps:

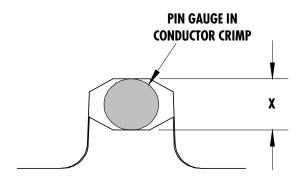

- 1. Remove dust, moisture and other contaminants with a clean brush, or soft, lint-free cloth.
- Do not use any abrasive materials that could damage the tool.
- 3. Make certain all pins; pivot points and bearing surfaces are protected with a thin coat of high quality machine oil. Do not oil excessively. The 64005-0500 (AT-5765) was engineered for durability, but like any fine piece of equipment it needs cleaning and lubrication for a maximum service life of trouble-free crimping. A light oil, such as 30 weight automotive oil used at the oil points shown in Figure 4, every 5,000 crimps or monthly will significantly enhance the tool life and ensure a stable calibration.

4. When tool is not in use store the tool in a clean, dry area.

Tool Calibration

A Certificate of Calibration (see last page) was supplied with the tool. To recalibrate this tool, pin gauge measurements should be taken in each conductor nest and compared to this chart. The tool should be lubricated prior to recalibration to ensure consistent measurements.

"Confining" Crimp

NestColor Code	Wire	e Range	"X" Dimension Conductor Crimp		Crimp Inspection Marking	
	AWG	mm²	Mean	Go	No Go	Murking
Red	18 - 22	0.35 - 0.80	.089	.086	.092	0

Warranty

This tool is for electrical terminal crimping purposes only. This tool is made of the best quality materials. All vital components are long life tested. All tools are warranted to be free of manufacturing defects for a period of **30 days.** Should such a defect occur, we would repair or exchange the tool free of charge. This repair or exchange will not be applicable to altered, misused or damaged tools.
