

Description

The AGQ200-48S1V2 is a single output DC-DC converter with standard quarter-brick outline and pin configuration. It delivers up to 40A output current with 1.2V output voltage. Above 85% efficiency and excellent thermal performance make it an ideal choice to supply power in telecom and datacom. It can work under -40°C ~ +85°C.

Operational Features

- Delivering up to 40A output current
- Ultra-high efficiency 85% typ. at full load
- Wide input range: 36V ~ 75V
- Excellent thermal performance
- No minimum load requirement
- Fixed frequency operation
- RoHS 6 compliant

Control Features

- Remote control function
- Remote output sense
- Trim function: -20% ~ +10%

Protection Features

- Input under voltage lockout
- Output over current protection
- Output over voltage protection
- Over temperature protection

Mechanical Features

- Industry standard quarter-brick pin-out outline
- Open frame or baseplate optional
- Pin length option: 3.8mm, 4.8mm, 5.8mm

Safety & EMC

- Meets safety standards UL 60950-1, CSA-C22.2 NO. 60950-1, IEC/EN 60950-1 and GB4943
- Approved by UL and TUV
- Meets 2006/95/EEC and 93/68/EEC directives which facilitates CE marking in user's end product
- Meets conducted emission's requirements of EN55022 Class A with external filter

Electrical Characteristics

Full operating ambient temperature range is -40°C to +85°C.

Application Note

Typical Application

Figure 11 Typical application

C1: 100 μ F/100V electrolytic capacitor, P/N: UVZ2A101MPD (Nichicon) or equivalent caps

C2: 1 μ F/100V X7R ceramic capacitor

C3: 1 μ F/25V X7R ceramic capacitor

C4: 470 μ F/25V electrolytic capacitor, P/N: UPM1E471MPD (Nichicon) or equivalent caps

External fast blow fuse with a rating of 15A should be used in the application.

If the load is far from the unit, connect S+ and S- to the terminal of the load respectively to compensate the voltage drop on the transmission line.

Remote ON/OFF

Either positive or negative remote ON/OFF logic is available in AGQ200-48S1V2. The following figure is the detailed internal circuit and reference in AGQ200-48S1V2.

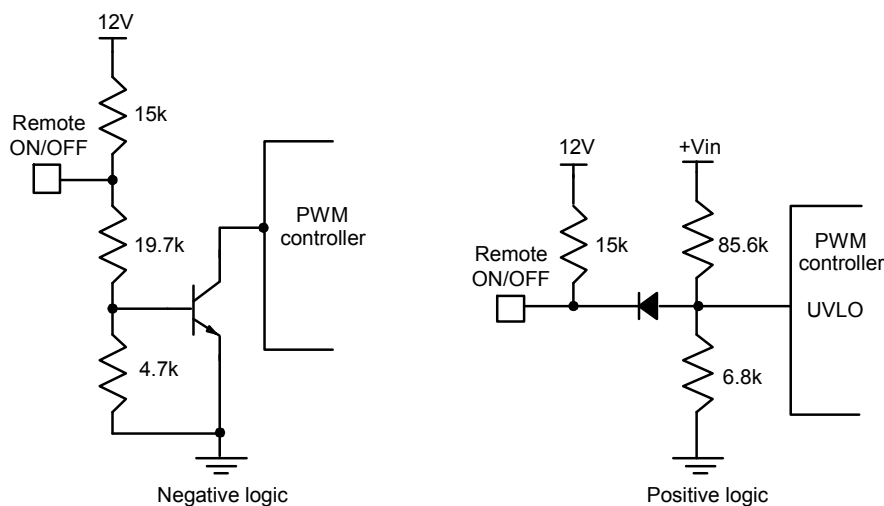

Figure 12 Remote ON/OFF internal diagram

Trim Characteristics

Connecting an external resistor between Trim pin and V_{o-} pin will decrease the output voltage. While connecting it between Trim and V_{o+} will increase the output voltage. The following equations determine the external resistance to obtain the trimmed output voltage.

$$R_{trim-down} = \frac{510}{\Delta} - 10.2(k\Omega)$$

$$R_{trim-up} = \frac{5.1 \times V_{nom} \times (100 + \Delta)}{0.6 \times \Delta} - \frac{510}{\Delta} - 10.2(k\Omega)$$

$$\Delta = (V_o - V_{nom}) \times 100 / V_{nom}$$

V_{nom} : Nominal output voltage

For example, to get 1.32V output, the trimming resistor is

$$R_{trim-up} = \frac{5.1 \times 1.2 \times (100 + (1.32 - 1.2) \times 100 / 1.2)}{0.6 \times (1.32 - 1.2) \times 100 / 1.2} - \frac{510}{(1.32 - 1.2) \times 100 / 1.2} - 10.2 = 51(k\Omega)$$

The output voltage can also be trimmed by potential applied at the Trim pin.

$$V_o = V_{trim} + 0.6$$

Where V_{trim} is the potential applied at the Trim pin, and V_o is the desired output voltage.

When trimming up, the output current should be decreased accordingly so as not to exceed the maximum output power.

Soldering

The product is intended for standard manual or wave soldering.

When wave soldering is used, the temperature on pins is specified to maximum 260°C for maximum 7s.

When manual soldering is used, the iron temperature should be maintained at 300°C ~ 380°C and applied to the converter pins for less than 10s. Longer exposure can cause internal damage to the converter.

Cleaning of solder joint can be performed with cleaning solvent IPA or similitive.

Thermal Considerations

Note: When the temperature of this test point is lower than 100°C, the module thermal reliability is available

Emerson Network Power Co., Ltd. has been committed to the design and manufacturing of environment-friendly products. It will reduce and eventually eliminate the hazardous substances in the products through unremitting efforts in research. However, limited by the current technical level, the following parts still contain hazardous substances due to the lack of reliable substitute or mature solution: 1. Solders (including high-temperature solder in parts) contain plumbum. 2. Glass of electric parts contains plumbum. 3. Copper alloy of pins contains plumbum
