

# AEIC-7273-S16

## Quad Differential Line Driver LC

### With Open-Collector Outputs And Enable Function

# Data Sheet

### Description

These line drivers are similar in function to the AEIC-7272-S16, only in an open-collector format. The VCC pin powers the internal logic only. Output voltage is dependent on the customer supplied voltage, up to a maximum of 30 V. There is essentially no difference in output swing or performance with VCC (LOGIC) values from 3.5-30 V. Internal clamp diodes allow trouble-free operation when driving cable lengths exceeding 100 meters. The outputs are protected by initiating shutdown when junction temperatures exceed safe limits. This feature assures highly reliable operation in harsh environments. Heat sinking is aided by having pin 8 directly connected to the ASIC substrate inside the package.

This part is available in 16L SOIC (Pb-free) package.

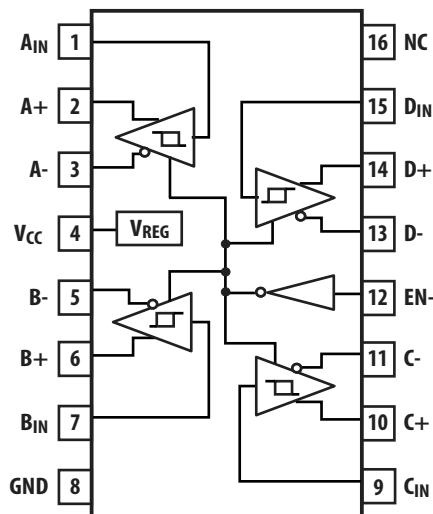

### Applications

- Encoders
- Industrial controls

### Features

- Supply (Bias) Voltage Range 3.5 V to 30 V
- Operation to 800KHz
- CMOS and TTL Compatible Inputs
- Support RS422A
- High Impedance Buffered Inputs with hysteresis
- NPN Open-Collector outputs
- 80 mA peak SINK/SOURCE current
- Outputs Protected by Thermal Shut-Down

High Level Output Current2	I <sub>OH2</sub>	–	0	10	μA	V <sub>CC</sub> = 30 V, V <sub>OC</sub> = 30 V

Notes :

1. This is not a test parameter, but for information only.
2. Unused inputs should be connected to ground.
3. Do not leave pin 12 open. In applications which do not use the enable function, this pin should be tied to ground.

**Table 3. AC Switching Characteristics**

Load is 470 ohms and 1000 pF, output to its compliment and 470 ohms each output to Voc.

Parameters	Symbol	Min.	Typ.	Max.	Units	Test Conditions
Propagation delay, rising input 50% point to zero crossing of differential outputs	T <sub>PLH</sub>	–	232	325	ns	See above.
Propagation delay, falling input 50% point to zero crossing of differential outputs	T <sub>PHL</sub>	–	236	330	ns	See above.
Output Rise Time	T <sub>R</sub>	–	516	722	ns	See above.
Output Fall Time	T <sub>F</sub>	–	516	722	ns	See above.

### Notes:

1. Lead coplanarity should be 0 to 0.004" max.
2. Package surface finishing: VD1 24~27 (Dual).  
Package surface finishing: VD1 13~15 (16L Soic(NB) Matrix).
3. All dimension excluding mold flashes.
4. The lead width, B to be determined at 0.0075" from the lead tip.
