

## DESCRIPTION

The EV2176-L-00A is an evaluation board for the MP2176GL, a high efficiency monolithic synchronous step-down converter.

The Evaluation Board can deliver 6A continuous load current from a 3V to 6V input with excellent load and line regulation.

Constant-On-Time (COT) control mode provides fast transient response and eases loop stabilization.

The Evaluation Board can be turned on or shut down via a remote ON/OFF input that is reference to ground. This input is compatible with popular logic devices.

## ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	$V_{IN}$	3 – 6	V
Output Voltage	$V_{OUT}$	1.2	V
Output Current	$I_{OUT}$	6	A
Switching Frequency	$f_{SW}$	600	kHz

## FEATURES

- Wide 3V to 6V Operating Input Range
- 6A Output Current
- 19.8m  $\Omega$ /15.3m  $\Omega$  Internal Power MOSFETs
- Proprietary Switching Loss Reduction Technique
- Adaptive COT for Ultrafast Transient Response
- 1% Reference Voltage Over -20 to +85 Junction Temperature Range
- Programmable Soft Start Time
- Pre-Bias Start up
- Programmable Switching Frequency from 300kHz to 1MHz.
- Non-Latch OCP, Non-Latch OVP Protection and Thermal Shutdown
- Available in a QFN3x4 package

## APPLICATIONS

- Telecom System Base Station
- Networking System
- Server
- Personal Video Recorders
- Flat Panel Television and Monitors
- Distributed Power Systems

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

## QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the VOUT and GND pins respectively.
2. Preset the output of power supply between 3V and 6V, and then turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins respectively:
4. Turn the power supply on. The MP2176GL will automatically start up.
5. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 2V to turn on the regulator or less than 0.4V to turn it off.
6. Use R1 and R2 to set the output voltage within  $V_{FB}=0.6V$ . Follow the Application information section in the device datasheet to select the proper value of R1, R2, inductor and output capacitor values when output voltage is changed.
7. If low ripple at light loads is needed, then use TOKO 1.2 $\mu$ H or 1.5 $\mu$ H L1. But with the larger L1, the transient response peak to peak value will become larger too.
