

CYPRESS
SEMICONDUCTOR

CY7C271
CY7C274

32K x 8 PROM Power-

Switched and Reprogrammable

Features

- CMOS for optimum speed/power
- Windowed for reprogrammability
- High speed
 - 30 ns (commercial)
 - 35 ns (military)
- Low power
 - 660 mW (commercial)
 - 715 mW (military)
- Super low standby power
 - Less than 165 mW when deselected
- EPROM technology 100% programmable
- Slim 300-mil package (7C271)
- Direct replacement for bipolar PROMs
- Capable of withstanding > 2001V static discharge

3

PROMS

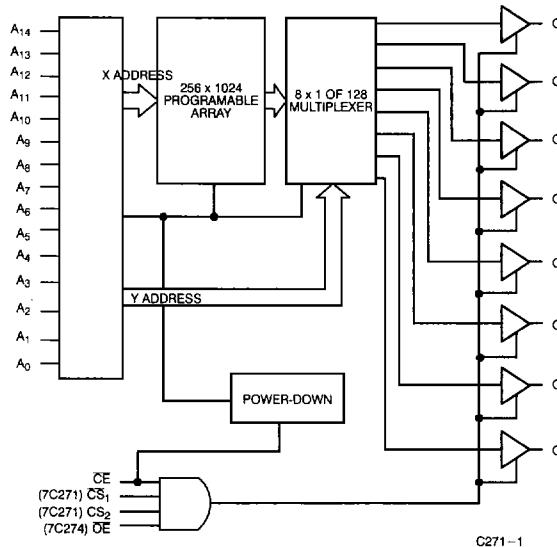

Functional Description

The CY7C271 and CY7C274 are high-performance 32,768-word by 8-bit CMOS PROMs. When disabled (CE HIGH), the 7C271/7C274 automatically powers down into a low-power stand-by mode. The CY7C271 is packaged in the 300-mil slim package. The CY7C274 is packaged in the industry standard 600-mil package. Both the 7C271 and 7C274 are available in a cerDIP package equipped with an erasure window to provide for reprogrammability. When exposed to UV light, the PROM is erased and can be reprogrammed. The memory cells utilize proven EPROM floating gate technology and byte-wide intelligent programming algorithms.

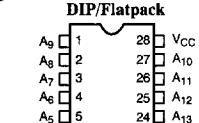

The CY7C271 and CY7C274 offer the advantage of lower power, superior performance, and programming yield. The EPROM cell requires only 12.5V for the super voltage, and low current requirements allow for gang programming. The EPROM cells allow each memory location to be tested 100% because each location is written into, erased, and repeatedly exercised prior to encapsulation. Each PROM is also tested for AC performance to guarantee that after customer programming, the product will meet DC and AC specification limits.

Reading the 7C271 is accomplished by placing active LOW signals on CS₁ and CE, and an active HIGH on CS₂. Reading the 7C274 is accomplished by placing active LOW signals on OE and CE. The contents of the memory location addressed by the address lines (A₀ – A₁₄) will become available on the output lines (O₀ – O₇).

Capacitance^[6]

| Parameter | Description | Test Conditions | Max. | Unit |
|------------------|--------------------|---|------|------|
| C _{IN} | Input Capacitance | T _A = 25°C , f = 1 MHz, V _{CC} = 5.0V | 10 | pF |
| C _{OUT} | Output Capacitance | | 10 | pF |

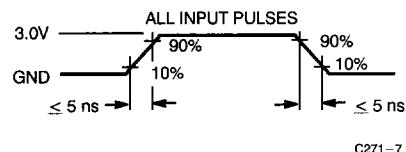

Notes:

- Contact a Cypress representative for information on industrial temperature range specifications.
- T_A is the "instant on" case temperature.
- See the last page of this specification for Group A subgroup testing information.
- 6.0 mA military
- For test purposes, not more than one output at a time should be shorted. Short circuit test duration should not exceed 30 seconds.
- See Introduction to CMOS PROMs in this Data Book for general information on testing.

Switching Waveform

C271-9

Note:7. CS_2 and \overline{CS}_1 are used on the 7C271 only. \overline{OE} is used on the 7C274 only.

Erasure Characteristics

Wavelengths of light less than 4000 angstroms begin to erase the 7C271 and 7C274 in the windowed package. For this reason, an opaque label should be placed over the window if the PROM is exposed to sunlight or fluorescent lighting for extended periods of time.

The recommended dose of ultraviolet light for erasure is a wavelength of 2537 angstroms for a minimum dose (UV intensity \times exposure time) of 25 Wsec/cm². For an ultraviolet lamp with a 12 mW/cm² power rating, the exposure time would be approximately 35 minutes. The 7C271 or 7C274 needs to be within 1 inch of the

lamp during erasure. Permanent damage may result if the PROM is exposed to high-intensity UV light for an extended period of time. 7258 Wsec/cm² is the recommended maximum dosage.

Programming Modes

Programming support is available from Cypress as well as from a number of third-party software vendors. For detailed programming information, including a listing of software packages, please see the PROM Programming Information located at the end of this section. Programming algorithms can be obtained from any Cypress representative.

Table 1. CY7C271 Mode Selection

| Mode | | Pin Function ^[8] | | | | | |
|-----------------|------------------------|----------------------------------|----------------------------------|------------------|------------------------------------|---------------------------------|---------------------------------|
| | | A ₁₄ – A ₀ | CE | CS ₂ | CS ₁ | O ₇ – O ₀ | |

| Program | Read or Output Disable | | A ₁₄ – A ₀ | V _{IHP} | V _{ILP} | V _{PP} | D ₇ – D ₀ |
| Program Verify | Other | | A ₁₄ – A ₀ | V _{ILP} | V _{IHP} /V _{ILP} | V _{PP} | O ₇ – O ₀ |
| Program Inhibit | Read or Output Disable | | A ₁₄ – A ₀ | V _{IHP} | V _{IHP} | V _{PP} | High Z |
| Blank Check | Other | | A ₁₄ – A ₀ | V _{ILP} | V _{IHP} /V _{ILP} | V _{PP} | O ₇ – O ₀ |

Table 2. CY7C274 Mode Selection

| Mode | | Pin Function ^[8] | | | | | |
|-----------------|------------------------|----------------------------------|----------------------------------|------------------|------------------------------------|---------------------------------|---------------------------------|
| | | A ₁₄ – A ₀ | OE | CE | V _{PP} | O ₇ – O ₀ | |
| Read | Read or Output Disable | | A ₁₄ – A ₀ | V _{IL} | V _{IL} | Note 9 | O ₇ – O ₀ |
| Output Disable | Other | | A ₁₄ – A ₀ | V _{IH} | X | X | High Z |
| Power Down | Read or Output Disable | | A ₁₄ – A ₀ | X | V _{IH} | X | High Z |
| Program | Other | | A ₁₄ – A ₀ | V _{IHP} | V _{ILP} | V _{PP} | D ₇ – D ₀ |
| Program Verify | Read or Output Disable | | A ₁₄ – A ₀ | V _{ILP} | V _{IHP} /V _{ILP} | V _{PP} | O ₇ – O ₀ |
| Program Inhibit | Other | | A ₁₄ – A ₀ | V _{IHP} | V _{IHP} | V _{PP} | High Z |
| Blank Check | Read or Output Disable | | A ₁₄ – A ₀ | V _{ILP} | V _{IHP} /V _{ILP} | V _{PP} | O ₇ – O ₀ |

Notes:

8. X can be V_{IL} (V_{ILP}) or V_{IH} (V_{IHP}).

9. V_{PP} should be tied to V_{CC} $\pm 5\%$ in read mode.
