

SP4T RF Switch

HSWA4-63DR+

Absorptive RF Switch with internal driver
Single Supply Voltage, +2.3V to +5.5V

THE BIG DEAL

- High Isolation, 61 dB @ 0.9 GHz
- Low insertion loss, 0.9 dB at 0.9 GHz
- High IP3, +58 dBm
- Fast switching, 255 ns typ.
- Low current consumption, 110 μ A
- Immune to latch-up

APPLICATIONS

- Defense
- Test and Measurements
- Switch matrices

PRODUCT OVERVIEW

Mini-Circuits' HSWA4-63DR+ is a MMIC SP4T absorptive switch with an internal driver designed for wideband operation from 30 MHz to 6 GHz, supporting many applications requiring high performance across a wide frequency range. This model provides excellent isolation, fast switching speed and high linearity in a tiny 4x4mm 24-Lead MCLP package. Produced using a unique CMOS process on silicon, it offers the performance of GaAs with the advantages of conventional CMOS devices. HSWA4-63DR+ provides a high level of ESD protection, MSL1 moisture sensitivity rating, and excellent repeatability.

KEY FEATURES

Feature	Advantages
Wideband, 30 MHz to 6.0 GHz	One model can be used in many applications, saving component count. Also ideal for wideband applications such as military and instrumentation.
Absorptive switch	In the off condition, RF output ports which are not switched ON are terminated into 50 Ω . This enables proper impedance termination of the circuitry following the RF output ports, preventing any unintended action such as oscillation.
High Isolation: <ul style="list-style-type: none"> • 61 dB at 0.9 GHz • 32 dB at 6 GHz 	High isolation significantly reduces leakage of power into OFF ports.
High linearity <ul style="list-style-type: none"> • +58 dBm IIP3 • +97 dBm IIP2 at 1.9 GHz 	High linearity minimizes unwanted intermodulation products which are difficult or impossible to filter in multi-carrier environments such as CATV, or in the presence of strong interfering signal from adjacent circuitry or received by antenna.
Built-in negative voltage generator	Operates with single positive supply voltage; no need for DC blocking capacitors, unless external DC is present at the RF ports.
Built-in CMOS driver	No need for external driver, saving PCB space and cost.
Wide Supply Voltage and low current +2.3 to 5.5V and 110 μ A typ.	Ideal for battery operated systems consuming very low current for long battery life.
Immune to Latch-up	Unlike conventional CMOS devices, HSWA is immune to latch-up
Tiny size, 4 x 4mm QFN package	Tiny footprint saves space in dense layouts while providing low inductance, repeatable transitions, and excellent thermal contact to the PCB.
