

Dual-Band IQ/IF TRANSCEIVER WITH DUAL VCO SYNTHESIZERS

FEATURES

- Highly Integrated 802.16 d/e Radio IQ/IF Transceiver PLL ASIC
- Fully Integrated IF and RF VCOs and Synthesizers
- Super Heterodyne Architecture for Superior Performance
- Internal PLL Reference Oscillator with Clock Output for Base-Band ASICs
- Internal AGC and Power Control Function
- IQ DC Offset Calibration Function and
- Anti-Aliasing Filters Integrated
- Differential LO and IF Interface for Enhanced Spurious Immunity
- RF LO Frequency Range:
 - 2536 – 3160 MHz
- Phase Noise 0.5 Degrees RMS Typical Over Channel BW
- Reference Frequency: 40 or 44 MHz
- Single 3.3-V Power Supply
- IF = 374 MHz (Both Bands)

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

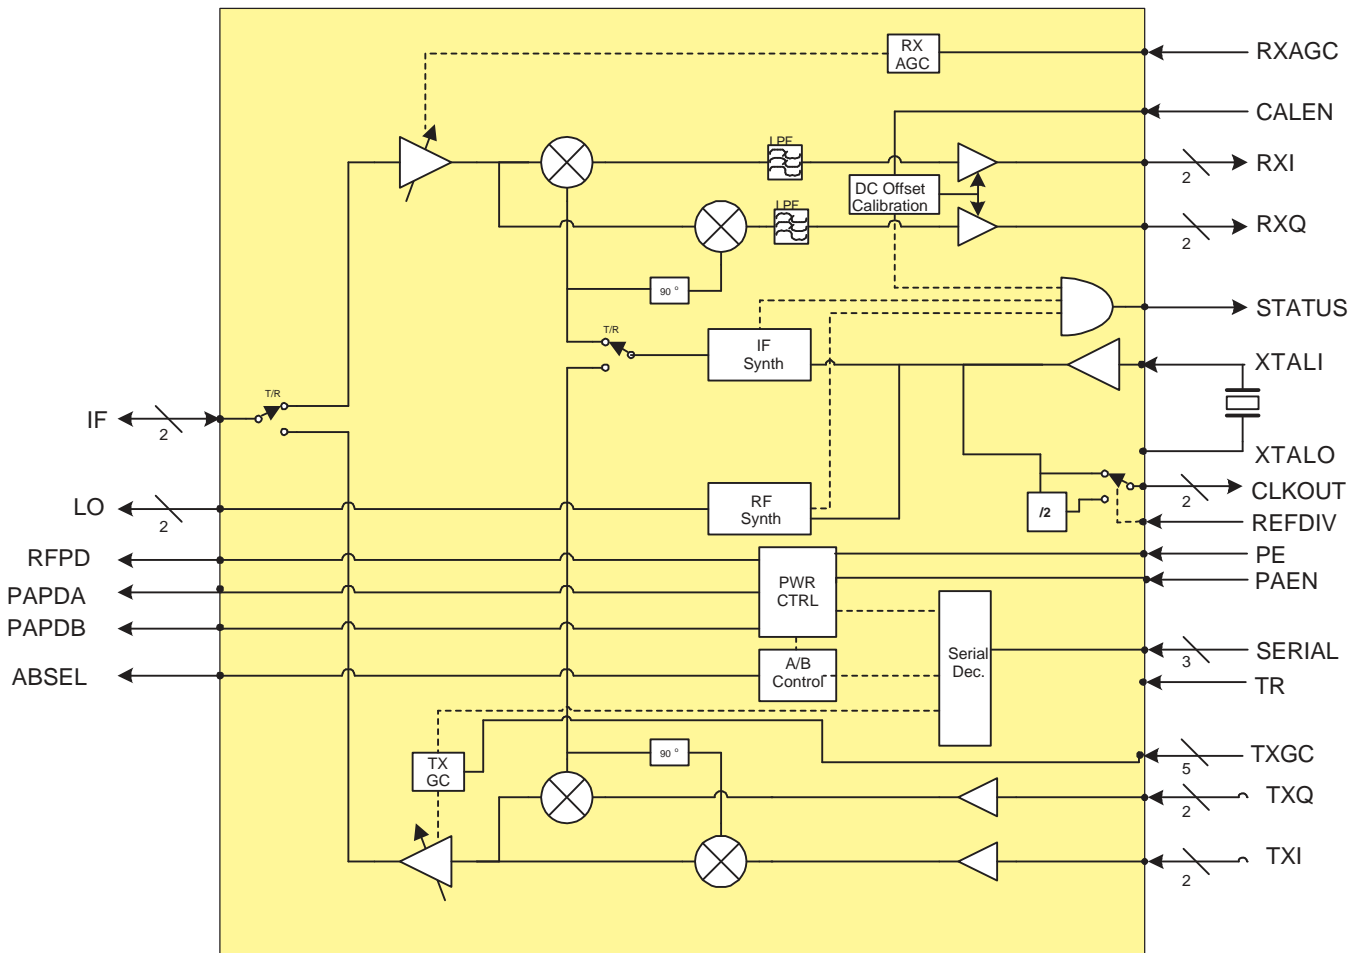

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

DESCRIPTION

The TRF2432 is a fully integrated IQ transceiver specifically for use in 802.16 d/e applications. The TRF2432 is designed to perform the IQ conversion at 374MHz IF as well as provide an RFLO and control logic to a TI RFFE (Radio Frequency Front End). The TRF2432 uses a common IF frequency for both bands, which eliminates the need for an additional IF filter in dual band applications. The TRF2432 has an internal IQ DC offset calibration function for the receive IQ interface. Combined with a TI integrated RFFE, the TRF2432 completes the TI WLAN two-chip radio.

The TRF2432 incorporates all of the system blocks from the modem to the RFFE except for the IF filtering and the reference crystal. The ASIC uniquely incorporates an internal PLL reference oscillator where only a crystal is needed, and also provides a clock output for base-band/MAC ASICs. TRF2432 includes two synthesizers with VCOs, IQ modulator, IQ demodulator, anti aliasing filters, IF amplifiers, receive AGC circuit, transmit power control and serial interface.

Table 3. Serial Register Definitions

NAME	SYMBOL	# OF BITS	DEFAULTS ⁽¹⁾	DESCRIPTION
Power mode	PS	2	0	Determines mode of operation: Standby, Idle, or Active. (see Table 17)
Band A or B select	A/B	1	0	Selects TX and RX band. 1 = A band and 0 = B Band
TX gain control	GC	5	[x,x,x,x,x]	Controls gain setting of TX if CGX=0 (see below). {11111} is max gain and {00000} is minimum gain.
Spectral inversion	S_INV	1	1	Sets both the TX I/Q modulator and RX I/Q demodulator for spectral inversion. S_INV = 1 for spectral inversion. S_INV = 0 for no inversion.
Crystal pre-scalar	P	1	1	Sets the crystal or reference pre-scalar divider.
RF PLL frequency	DR	5	[0,1,0,1,0] = 10	Registers used to program the RF synthesizer operation frequency.
	SR	3	[0,0,0] = 0	
	FR	7	[0,1,1,0,0,0,0]=48	
	MR	7	[1,0,0,1,1,1,1]=79	
IF PLL frequency	DI	5	X	Registers used to program the IF synthesizer operation frequency. These registers are only effective, when the IF synthesizer is in fractional-N mode (i.e. FN_IF=1)
	SI	3	X	
	FI	7	X	
	MI	7	X	
TX gain control MUX	GCX	1	1	GCX=0 switches the Tx gain control to the serial port. GCX=1 switches the Tx gain control to the parallel input pins.
Fractional N IF synthesizer	FN_IF	1	0	FN_IF =1 enables the fractional N IF synthesizer FN = 0 sets the IF synthesizer to a fixed frequency
REF_S	REF_S	1	0	Always set REF_S = 0
REF_M	REF_M	1	0	Always set REF_M = 0
Charge Pump Current Setting	CP	1	0	CP = 1 puts charge pump for reference and fixed synthesizers into continuous current mode. CP = 0 puts synthesizers into current saving mode.
XO low power mode	XO_LP	1	1	XO_LP =1 puts crystal oscillator in low power mode. XO_LP = 0 puts the crystal oscillator full-power mode for better noise performance, and start-up time.

(1) Default values are the initial values after power up or after PE goes HIGH. "x" indicates undefined.

Table 3. Serial Register Definitions (continued)

NAME	SYMBOL	# OF BITS	DEFAULTS ⁽¹⁾	DESCRIPTION
Fractional N IF synthesizer	FN_IF	1	0	FN_IF =1 enables the fractional N IF synthesizer when in idle or active mode. FN = 0 sets the IF synthesizer to a fixed frequency (374 MHz with 44 MHz crystal) for low power consumption.
TX output buffer high power	TX_HP	1	0	TX_HP = 1 puts IF amplifier in high linearity mode. TX_HP = 0 puts the IF amplifier into normal linearity mode to save current. This does not change linearity of the RFFE.

Input/Output Modes

The TRF2432 is designed to control power and band status for a TI RFFE. The TRF2432 is designed to drive external P-MOSFETs to power up and down the appropriate sections of the RFFE. Table 4 lists the various modes of the TRF2432 and the input parameters required to enter each mode. The corresponding outputs to the RFFE are also described. Figure 4 illustrates the power control interface and recommended P-MOSFET circuit.

SYNTHESIZER PROGRAMMING

The RF synthesizer frequency is programmed with four bytes: DR, SR, FR and MR and the crystal pre-scaler: P. See digital interface characteristics for programming instructions). The RF PLL locking frequency is calculated as follows:

$$f_{\text{RFLO}} = \frac{f_{\text{RCF}}}{(P + 1)} \times \left[8 \times (DR + 3) - SR - \frac{FR}{(MR + 1)} \right] \quad (1)$$

f_{REF} is the crystal reference frequency. On power-up the default register values (P=1, DR=10, SR=0, FR=48 and MR=79) with a 40-MHz crystal will attempt to lock the RFLO to 2068 MHz. The valid register ranges are listed below.

Table 6. Valid RF Register Ranges

REGISTER	MIN	MAX
DR	7	31
SR	0	7
FR	0	MR
MR	32	127

The IF frequency synthesizer defaults to integer mode (FN_IF =0) to operate from a 44 MHz reference and is preset for 374 MHz IF. When using a 40 MHz reference, the synthesizer must be set to fractional mode (FN_IF =1) and programmed. The synthesizer is programmed with four bytes DI, SI, FI and MI. The register programming values for the IF synthesizer when using a 40 MHz reference are listed in Table 21.

Table 7. IF Register Values for 40-MHz Reference

REGISTER	VALUE
DI	16
SI	2
FI	32
MI	79

RFFE POWER CONTROL INTERFACE

The TRF2432 will control the RFFE power for all radio operational modes through three external P-MOSFETs. The suggested circuit is illustrated in Figure 4.

Figure 3.

IQ DC Calibration

The TRF2432 receiver has an IQ DC offset calibration function. This operation can be performed in receiver active mode only. The calibration process is entered by a rising edge on CALEN, which remains high as long as the calibration is required. The calibration procedure is as follows:

1. Set to RX active mode
2. Wait for RF and IF Synthesizers to lock: STATUS=HIGH
3. Set Rx AGC to min gain
4. Set CALEN=HIGH to enter calibration mode:
 - a. IQ Transceiver turns off RFFE
 - b. Internal calibration process runs
 - c. The Status bit is low during calibration procedure and returns high once the calibration is complete
5. Hold CALEN HIGH to maintain calibration
6. Return to RX active Mode

Notes on Calibration:

1. Calibration is retained as long as CALEN=HIGH and the RF2432 is **not** put into Sleep Mode.
2. To Reset calibration, set CALEN=LOW.
3. If CALEN is held LOW then calibration circuit is completely disabled, and does not contribute to any DC offset.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and

continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PLASTIC QUAD FLATPACK NO-LEAD

- NOTES:
- All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5-1994.
 - This drawing is subject to change without notice.
 - QFN (Quad Flatpack No-Lead) Package configuration.
 - The package thermal pad must be soldered to the board for thermal and mechanical performance.
 - See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
 - Package complies to JEDEC MO-220.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
