EV150-J-00A
Offline Primary Side Regulator EV Board

The Future of Analog IC Technology®

DESCRIPTION

MP150 is a primary side regulator providing accurate constant voltage (CV) regulation without the Opto-coupler, support Buck, Buck-Boost and Flyback topologies. 500V MOSFET is integrated in the regulator, so very simple structure and low cost can be achieved. These features help to make it a competitive candidate for off-line low power applications, such as home appliance and standby power.

MP150 is a green mode operation regulator. With the load decreasing, the peak current and the switching frequency will both decreasing with the load. As a result, it still offers excellent efficiency performance at light load, thus better average efficiency is achieved.

MP150 features various protections like Thermal Shutdown (TSD), VCC under Voltage Lockout (UVLO), Over Load Protection (OLP), Short Circuit Protection (SCP), Open Loop Protection.

MP150 is available in the TSOT23-5 package.

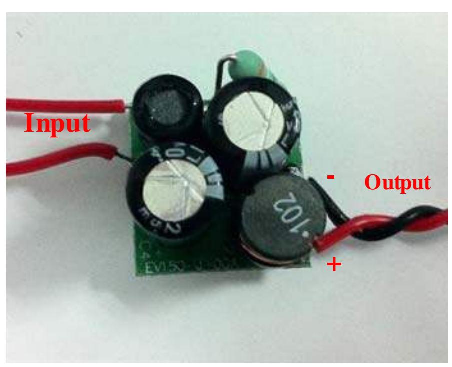
FEATURES

- Primary side constant voltage (CV) control, supporting Buck, Buck-Boost and Flyback topologies
- Integrated 500V/30Ω MOSFET
- < 150mW No-load power consumption
- Up to 2W output power
- Maximum DCM output current lower than 120mA, maximum CCM output current lower than 200mA
- Frequency Foldback
- Maximum frequency limitation
- Peak Current Compression
- Internal High Voltage Current Source

APPLICATIONS

- Home Appliance, white goods and consumer electronics
- Industrial Controls
- Standby Power

EV150-J-00A EVALUATION BOARD



(L x W x H) 1.7cm x 1.7cm x 1.7cm

Board Number	MPS IC Number

EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.
V_{IN} = 85~265V_{AC}, V_{OUT} = 5V, I_{OUT} = 200mA, T_A = 25ºC, unless otherwise noted.

Efficiency

SURGE PERFORMANCE

With the input capacitors C3 (3.3μF) and C4 (3.3μF), the board can pass 500V surge test. Table 1 shows the capacitance required under normal condition for different surge voltage.

Table 1: Recommended Capacitor Values

Surge Voltage	500V	1000V	2000V
C1	1μF	10μF	22μF
C2	1μF	4.7μF	10μF

QUICK START GUIDE

1. Preset Power Supply to 85V ≤ V_{IN} ≤ 265V.
2. Turn Power Supply off.
3. Connect the Line and Neutral terminals of the power supply output to L and N port.
4. Connect the positive terminal of the load to "+" port, and connect the negative terminal of the load to "-" port.
5. Turn Power Supply on after making connections.
