

Universal Proto-Board PCBs 5cm x 7cm – 3 Pack

Product ID: 4786

Here's a handy 3-pack of 5cm x 7cm Proto-board PCBs in green. Both sides have a green silkscreen with some row/column markings. Note that these *don't* have any traces between the PCB holes, [you would normally bend over a thru-hole lead to create connections](#). They're also good for just plain mechanical work because they are made of strong FR4.

There are also four mounting holes so you can attach the PCB to your project box.

These are affordable and of good quality so we decided to put them in a pack of 3.

Contains 18 X lines by 24 Y lines totaling 432 holes.
