

## LEDW10\_24 Series

Constant current power LED Driver - Wide Input - Non-Isolated & Regulated

### LED Driver

- ⊕ Ultra wide range voltage input (5.5-48VDC)
- ⊕ High efficiency up to 96%
- ⊕ Short Circuit Protection (SCP)
- ⊕ Remote ON/OFF
- ⊕ Lead wire package, simple and convenient
- ⊕ Waterproof Level IP67
- ⊕ With large capacitive loads (1000μF)
- ⊕ AC-DC, EMC recommended circuit
- ⊕ PWM dimming & analogue dimming
- ⊕ Low ripple & noise (<100mV)
- ⊕ RoHS Compliance

The LEDW10\_24 is a high-power LED driver designed for the step-down constant current source. With high efficiency, wide input voltage range, high-temperature environment, functional and so on. Contains a PWM dimming, analog dimming and remote shutdown capabilities.

It can be widely used in backlight and 12V, 24V, 36V landscape lighting, special lighting controls, commercial lighting, street lighting, home lighting, automotive lighting and other lighting systems. Use of lead type package, allowing customers to use more convenient.

#### Note:

1. If the product is not operated within the required load range, the product performance cannot be guaranteed to comply with all parameters in the datasheet;
2. The maximum capacitive load offered were tested at nominal input voltage and full load;
3. Unless otherwise specified, parameters in this datasheet were measured under the conditions of Ta = 25°C, humidity <75% with nominal input voltage and rated output load;
4. All index testing methods are based on our Company's corporate standards;
5. We can provide product customization service;
6. Specifications are subject to change without prior notice.

## Typical application circuits

If it is necessary to protect LED in actual application, you could connect a PTC to the input of every channel or all channels, as shown in Recommended AC input circuit.

Note: The negative output terminal can't connect GND, or the module may be damaged.

## PWM dimming control

For PWM dimming signals with a certain frequency, the output current of the driver is related to the duty ratio of PWM signal. Refer to the formula for the calculation method:

$$I_{o\_set} = \frac{(DT-0.8)}{T} I_{o\_norm}$$

Where,  $I_{o\_set}$  represents required output current (mA); D represents the duty ratio (%) of PWM signal; T represents the period (ms) of PWM signal; and  $I_{o\_norm}$  represents the rated output value (mA) of the driver.

**Note:** The formula is for reference only; and deviation of output current may exist due to various loads. The min. conducted time of PWM signal shall not be less than 0.8ms, or the product will be in abnormal operation; in case of low voice from the driver during PWM dimming, it is normal since the PWM dimming frequency is within the auditory frequency range of human ears (20Hz-20KHz in general). To prevent seeing flash of the LED by human eyes, it is suggested to set the PWM dimming frequency between 100-200Hz.

## Analogue dimming control and application sample

Analogue dimming circuit

**Note:** The voltage drop of all LEDs in the datasheet is 3.3-3.8V during actual application, the number of LEDs can be confirmed based on the actual voltage drop and output voltage of LEDs. This product does not support hot-Plug use.
