

Polycarbonate, 3-Pack

Polycarbonate is a durable, lightweight plastic that machines well with a fast spindle speed and a sharp tool. It's often used in place of glass, when a strong and shatter-proof, but light, material is required. Common applications include eye safety, windscreens for motor vehicles, and bullet protection. Available in three-packs of 4"x5" in two different thicknesses.

4"x5"x0.236", 4"x5"x0.375"
