

Voltage Detector with Separated Sense Pin & Delay Capacitor Pin

■ GENERAL DESCRIPTION

The XC6118 series is a low power consumption voltage detector with high accuracy detection, manufactured using CMOS process and laser trimming technologies.

Since the sense pin is separated from the power supply pin, it allows the IC to monitor the other power supply.

The XC6118 can maintain the state of detection even when voltage of the monitored power supply drops to 0V.

Moreover, a release delay time can be adjusted by the external capacitor connected to the Cd pin.

The V_{OUT} pin is available in both CMOS and N-channel open drain output configurations.

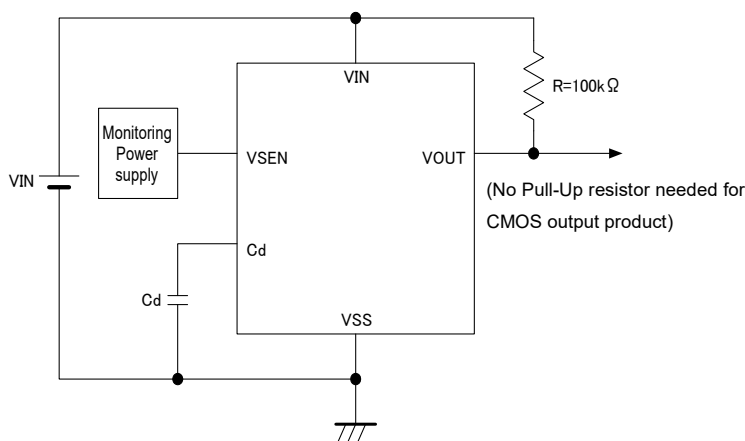

■ APPLICATIONS

- Microprocessor reset circuitry
- Charge voltage monitors
- Memory battery back-up switch circuits
- Power failure detection circuits

■ FEATURES

High Accuracy	: ±2% (Detect Voltage ≥ 1.5V) ±30mV (Detect Voltage < 1.5V)
Low Power Consumption	: 0.4 μA TYP. (Detect, V _{IN} =1.0V) 0.8 μA TYP. (Release, V _{IN} =1.0V)
Detect Voltage Range	: 0.8V ~ 5.0V (0.1V increments)
Operating Voltage Range	: 1.0V ~ 6.0V
Temperature Characteristics	: ±100ppm/°C TYP.
Output Configuration	: CMOS, N-channel open drain
Pin Function	: Power supply separation Release delay time adjustable
Operating Ambient Temperature	: -40°C ~ 85°C
Packages	: USP-4, SOT-25
Environmentally Friendly	: EU RoHS Compliant, Pb Free

■ TYPICAL APPLICATION CIRCUIT

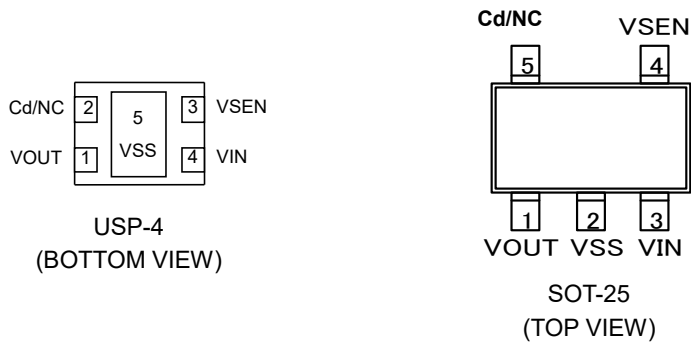

■ TYPICAL PERFORMANCE CHARACTERISTICS

- Output Voltage vs. Sense Voltage

PIN CONFIGURATION

- * In the XC6118xxxA/B series, the dissipation pad should not be short-circuited with other pins.
- * In the XC6118xxxC/D series, when the dissipation pad is short-circuited with other pins, connect it to the NC pin (No.2) pin before use.

PIN ASSIGNMENT

PIN NUMBER		PIN NAME	FUNCTION
USP-4	SOT-25		
1	1	V _{OUT}	Output (Detect "L")
2	5	Cd	Delay Capacitance ^(*1)
2	5	NC	No Connection
3	4	V _{SEN}	Sense
4	3	V _{IN}	Input
5	2	V _{SS}	Ground ^(*2)

NOTE:

*1: With the V_{SS} pin of the USP-4 package, a tab on the backside is used as the pin No.5.

*2: In the case of selecting no built-in delay capacitance pin type, the delay capacitance (Cd) pin will be used as the NC.

PRODUCT CLASSIFICATION

Ordering Information

XC6118①②③④⑤⑥-⑦^(*1)

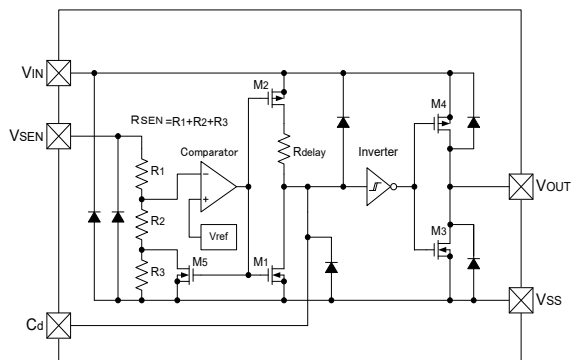

DESIGNATOR	ITEM	SYMBOL	DESCRIPTION
①	Output Configuration	C	CMOS output
		N	N-ch open drain output
②③	Detect Voltage	08 ~ 50	e.g. 18 → 1.8V
④	Options	A	Built-in delay capacitance pin, hysteresis 5% (TYP.) (Standard*)
		B	Built-in delay capacitance pin, hysteresis less than 1%(Standard*)
		C	No built-in delay capacitance pin, hysteresis 5% (TYP.) (Semi-custom)
		D	No built-in delay capacitance pin, hysteresis less than 1% (Semi-custom)
⑤⑥-⑦	Packages (Order Unit)	GR-G	USP-4 (3,000pcs/Reel)
		MR-G	SOT-25 (3,000pcs/Reel)

*When delay function isn't used, open the delay capacitance pin before use.

(*1) The "-G" suffix denotes Halogen and Antimony free as well as being fully EU RoHS compliant.

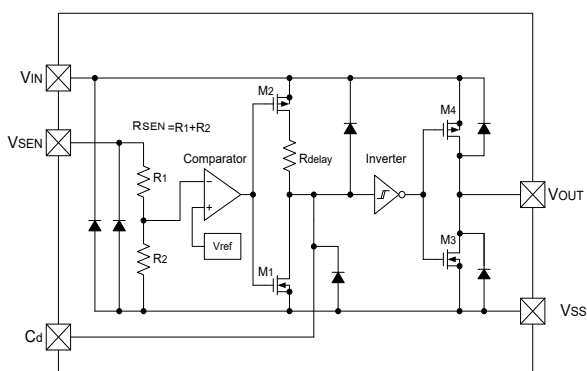

■ BLOCK DIAGRAMS

(1) XC6118CxxA

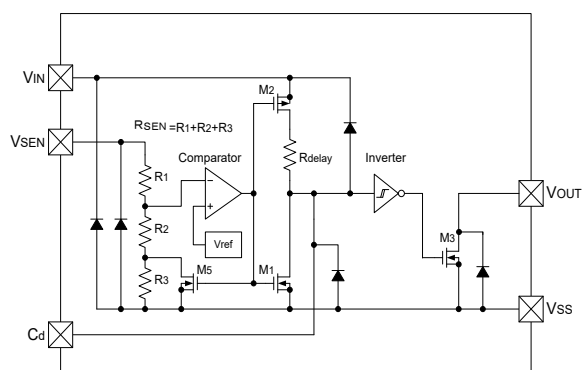

*The delay capacitance pin (Cd) is not connected to the circuit in the block diagram of XC6118CxxC (semi-custom).

(2) XC6118CxxB

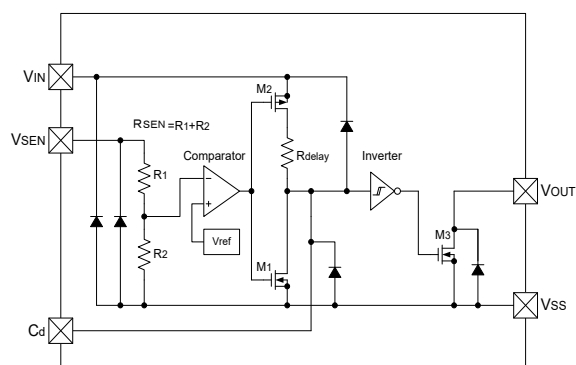

*The delay capacitance pin (Cd) is not connected to the circuit in the block diagram of XC6118CxxD (semi-custom).

(3) XC6118NxxA

*The delay capacitance pin (Cd) is not connected to the circuit in the block diagram of XC6118NxxC (semi-custom).

(4) XC6118NxxB

*The delay capacitance pin (Cd) is not connected to the circuit in the block diagram of XC6118NxxD (semi-custom).

* Diodes inside the circuits are ESD protection diodes and parasitic diodes.

Circuit 9

*No delay capacitance pin available in the XC6118xxxC/D series.

OPERATIONAL EXPLANATION

A typical circuit example is shown in Figure 1, and the timing chart of Figure 1 is shown in Figure 2.

*The XC6118N series (N-ch open drain output) requires a pull-up resistor for pulling up output.

Figure 1: Typical application circuit example

Figure 2: The timing chart of Figure 1

- ① As an early state, the sense pin is applied sufficiently high voltage (6.0V MAX.) and the delay capacitance (Cd) is charged to the power supply input voltage, (V_{IN} : 1.0V MIN., 6.0V MAX.). While the sense pin voltage (V_{SEN}) starts dropping to reach the detect voltage (V_{DF}) ($V_{SEN} > V_{DF}$), the output voltage (V_{OUT}) keeps the "High" level ($=V_{IN}$).
 * If a pull-up resistor of the XC6118N series (N-ch open drain) is connected to added power supply different from the input voltage pin, the "High" level will be a voltage value where the pull-up resistor is connected.
- ② When the sense pin voltage keeps dropping and becomes equal to the detect voltage ($V_{SEN} = V_{DF}$), an N-ch transistor (M1) for the delay capacitance (Cd) discharge is turned ON, and starts to discharge the delay capacitance (Cd). An inverter (Inv.1) operates as a comparator of the reference voltage V_{IN} , and the output voltage changes into the "Low" level ($=V_{SS}$). The detect delay time [t_{DF}] is defined as time which ranges from $V_{SEN} = V_{DF}$ to the V_{OUT} of "Low" level (especially, when the Cd pin is not connected: t_{DF0}).
- ③ While the sense pin voltage keeps below the detect voltage, the delay capacitance (Cd) is discharged to the ground voltage ($=V_{SS}$) level. Then, the output voltage maintains the "Low" level while the sense pin voltage increases again to reach the release voltage ($V_{SEN} < V_{DF} + V_{HYS}$).

OPERATIONAL EXPLANATION (Continued)

- ④ When the sense pin voltage continues to increase up to the release voltage level ($V_{DF}+V_{HYS}$), the N-ch transistor (M1) for the delay capacitance (Cd) discharge will be turned OFF, and the delay capacitance (Cd) will start discharging via a delay resistor (R_{DELAY}). The inverter (Inv.1) will operate as a comparator (Rise Logic Threshold: $V_{TLH}=V_{TCD}$, Fall Logic Threshold: $V_{THL}=V_{SS}$) while the sense pin voltage keeps higher than the detect voltage ($V_{SEN} > V_{DF}$).
- ⑤ While the delay capacitance pin voltage (V_{CD}) rises to reach the delay capacitance pin threshold voltage (V_{TCD}) with the sense pin voltage equal to the release voltage or higher, the sense pin will be charged by the time constant of the RC series circuit. Assuming the time to the release delay time (t_{DR}), it can be given by the formula (1).

$$t_{DR} = -R_{DELAY} \times Cd \times \ln(1 - V_{TCD}/V_{IN}) \dots(1)$$

The release delay time can also be briefly calculated with the formula (2) because the delay resistance is 2.0MΩ(TYP.) and the delay capacitance pin threshold voltage is $V_{IN}/2$ (TYP.)

$$t_{DR} = R_{DELAY} \times Cd \times 0.69 \dots(2)$$

* : R_{DELAY} is 2.0MΩ(TYP.)

As an example, presuming that the delay capacitance is 0.68 μF, t_{DR} is :

$$2.0 \times 10^6 \times 0.68 \times 10^{-6} \times 0.69 = 938(\text{ms})$$

* Note that the release delay time may remarkably be short when the delay capacitance (Cd) is not discharged to the ground (=VSS) level because time described in ③ is short.

- ⑥ When the delay capacitance pin voltage reaches to the delay capacitance pin threshold voltage ($V_{CD}=V_{TCD}$), the inverter (Inv.1) will be inverted. As a result, the output voltage changes into the "High" (=VIN) level. t_{DR0} is defined as time which ranges from $V_{SEN}=V_{DF}+V_{HYS}$ to the V_{OUT} of "High" level without connecting to the Cd.
- ⑦ While the sense voltage is higher than the detect voltage ($V_{SEN} > V_{DF}$), the delay capacitance pin is charged until the delay capacitance pin voltage becomes the input voltage level. Therefore, the output voltage maintains the "High" (=VIN) level.

Function Chart

V _{SEN}	Cd	TRANSITION OF V _{OUT} CONDITION *1		
		①		②
L	L	L	⇒	L
	H			
	L	H		
	H			
	L	L	⇒	L
	H		⇒	H
	L	H	⇒	
	H			

Example

ex. 1) V_{OUT} ranges from 'L' to 'H' in case of $V_{SEN} = 'H'$ ($V_{DR} \geq V_{SEN}$), $Cd = 'H'$ ($V_{TCD} \geq Cd$) while V_{OUT} is 'L'.

ex. 2) V_{OUT} maintains 'H' when Cd ranges from 'H' to 'L', $V_{SEN} = 'H'$ and $Cd = 'L'$ when V_{OUT} becomes 'H' in ex.1.

Release Delay Time Chart

DELAY CAPACITANCE [Cd] (μF)	RELEASE DELAY TIME [t _{DR}] (TYP.) (ms)	RELEASE DELAY TIME [t _{DR}] *2 (MIN. ~ MAX.) (ms)
0.010	13.8	11.0 ~ 16.6
0.022	30.4	24.3 ~ 36.4
0.047	64.9	51.9 ~ 77.8
0.100	138	110 ~ 166
0.220	304	243 ~ 364
0.470	649	519 ~ 778
1.000	1380	1100 ~ 1660

* The release delay time values above are calculated by using the formula (2).

*2: The release delay time (t_{DR}) is influenced by the delay capacitance Cd.

■ NOTES ON USE

1. Please use this IC within the stated maximum ratings. For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
 2. The power supply input pin voltage drops by the resistance between power supply and the VIN pin, and by through current at operation of the IC. At this time, the operation may be wrong if the power supply input pin voltage falls below the minimum operating voltage range. In CMOS output, for output current, drops in the power supply input pin voltage similarly occur. Moreover, in CMOS output, when the VIN pin and the sense pin are short-circuited and used, oscillation of the circuit may occur if the drops in voltage, which caused by through current at operation of the IC, exceed the hysteresis voltage. Note it especially when you use the IC with the VIN pin connected to a resistor.
 3. When the setting voltage is less than 1.0V, be sure to separate the VIN pin and the sense pin, and to apply the voltage over 1.0V to the VIN pin.
 4. Note that a rapid and high fluctuation of the power supply input pin voltage may cause a wrong operation.
 5. Power supply noise may cause operational function errors, Care must be taken to put the capacitor between VIN-GND and test on the board carefully.
 6. If the VIN pin voltage drops sharply (example: 6.0V to 0V) during the release operation with a Cd (delay capacitance) connected to the Cd pin, an overcurrent will flow through the diode between the Cd and VIN pin.
If the fluctuation range of the VIN pin during the release operation is less than 1.0V, no special measures are required, but if the Cd is 0.1μF or more and the power supply voltage fluctuation is 0.01V/μs or more, please take either one of the following measures.
 - To place a Schottky diode between the VIN pin and the Cd pin. (See Figure 3)
 - To place a resistance (RCd) of 500Ω to 1kΩ between the Cd and Cd pin. (See Figure 4)
- * Please note if the RCd is connected between the Cd and Cd pin, the Cd discharge time will be longer.
When connecting the RCd, please confirm in advance that there is no problem in actual operation.

Figure 3: Circuit example with a Schottky diode connected to the Cd pin

Figure 4: Circuit example with a resistor connected to the Cd pin

NOTES ON USE

7. In N-channel open drain output, V_{OUT} voltage at detect and release is determined by resistance of a pull up resistor connected at the V_{OUT} pin. Please choose proper resistance values with refer to Figure 5;

During detection: $V_{OUT} = V_{PULL} / (1 + R_{PULL} / R_{ON})$

V_{PULL} : Pull up voltage

R_{ON} (※1) : On resistance of N channel driver M3 can be calculated as V_{DS} / I_{OUT1} from electrical characteristics,

For example, when (※2) $R_{ON} = 0.5 / 0.8 \times 10^{-3} = 625\Omega$ (MAX.) at $V_{IN}=2.0V$, $V_{PULL} = 3.0V$ and $V_{OUT} \leq 0.1V$ at detect,

$$R_{PULL} = (V_{PULL} / V_{OUT} - 1) \times R_{ON} = (3 / 0.1 - 1) \times 625 \approx 18k\Omega$$

In this case, R_{PULL} should be selected higher or equal to 18k Ω in order to keep the output voltage less than 0.1V during detection.

(※1) R_{ON} is bigger when V_{IN} is smaller, be noted.

(※2) For calculation, Minimum V_{IN} should be chosen among the input voltage range.

During releasing : $V_{OUT} = V_{PULL} / (1 + R_{PULL} / R_{OFF})$

V_{PULL} : Pull up voltage

R_{OFF} : On resistance of N channel driver M3 is 15M Ω (MIN.) when the driver is off (as to V_{OUT} / I_{LEAK})

For example : when $V_{PULL} = 6.0V$ and $V_{OUT} \geq 5.99V$,

$$R_{PULL} = (V_{PULL} / V_{OUT} - 1) \times R_{OFF} = (6 / 5.99 - 1) \times 15 \times 10^6 \approx 25 k\Omega$$

In this case, R_{PULL} should be selected smaller or equal to 25 k Ω in order to obtain output voltage higher than 5.99V during releasing.

1. The product and product specifications contained herein are subject to change without notice to improve performance characteristics. Consult us, or our representatives before use, to confirm that the information in this datasheet is up to date.
2. The information in this datasheet is intended to illustrate the operation and characteristics of our products. We neither make warranties or representations with respect to the accuracy or completeness of the information contained in this datasheet nor grant any license to any intellectual property rights of ours or any third party concerning with the information in this datasheet.
3. Applicable export control laws and regulations should be complied and the procedures required by such laws and regulations should also be followed, when the product or any information contained in this datasheet is exported.
4. The product is neither intended nor warranted for use in equipment of systems which require extremely high levels of quality and/or reliability and/or a malfunction or failure which may cause loss of human life, bodily injury, serious property damage including but not limited to devices or equipment used in 1) nuclear facilities, 2) aerospace industry, 3) medical facilities, 4) automobile industry and other transportation industry and 5) safety devices and safety equipment to control combustions and explosions. Do not use the product for the above use unless agreed by us in writing in advance.
5. Although we make continuous efforts to improve the quality and reliability of our products; nevertheless Semiconductors are likely to fail with a certain probability. So in order to prevent personal injury and/or property damage resulting from such failure, customers are required to incorporate adequate safety measures in their designs, such as system fail safes, redundancy and fire prevention features.
6. Our products are not designed to be Radiation-resistant.
7. Please use the product listed in this datasheet within the specified ranges.
8. We assume no responsibility for damage or loss due to abnormal use.
9. All rights reserved. No part of this datasheet may be copied or reproduced unless agreed by Torex Semiconductor Ltd in writing in advance.
