

## LOW-POWER QUAD DIFFERENTIAL COMPARATOR

### FEATURES

- Qualified for Automotive Applications
- Wide Supply-Voltage Range . . . 3 V to 30 V
- Ultra-Low Power-Supply Current  
Drain . . . 60  $\mu$ A Typ
- Low Input Biasing Current . . . 3 nA
- Low Input Offset Current . . .  $\pm 0.5$  nA
- Low Input Offset Voltage . . .  $\pm 2$  mV
- Common-Mode Input Voltage Includes Ground
- Output Voltage Compatible With MOS and CMOS Logic
- High Output Sink-Current Capability  
(30 mA at  $V_O = 2$  V)
- Power-Supply Input Reverse Voltage Protected
- Single Power-Supply Operation
- Pin-for-Pin Compatible With LM239, LM339, LM2901

**D PACKAGE  
(TOP VIEW)**

### DESCRIPTION/ORDERING INFORMATION

The LP2901 is a low-power quadruple differential comparator. The device consists of four independent voltage comparators designed specifically to operate from a single power supply and, typically, to draw 60- $\mu$ A drain current over a wide range of voltages. Operation from split power supplies also is possible, and the ultra-low power-supply drain current is independent of the power-supply voltage.

Applications include limit comparators, simple analog-to-digital converters, pulse generators, square-wave generators, time-delay generators, voltage-controlled oscillators, multivibrators, and high-voltage logic gates. The LP2901 is designed specifically to interface with the CMOS logic family. The ultra-low power-supply current makes these products desirable in battery-powered applications.

The LP2901 is characterized for operation from  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ .

#### ORDERING INFORMATION<sup>(1)</sup>

T <sub>A</sub>	V <sub>IO</sub> MAX AT 25°C	PACKAGE <sup>(2)</sup>		ORDERABLE PART NUMBER	TOP-SIDE MARKING
$-40^{\circ}\text{C}$ to $85^{\circ}\text{C}$	$\pm 5$ mV	SOIC – D	Reel of 2500	LP2901IDRQ1	LP2901IQ1

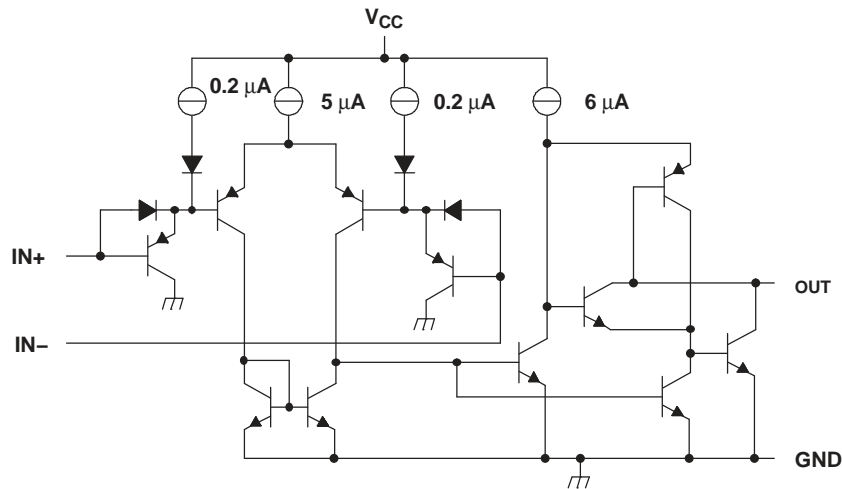

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI web site at [www.ti.com](http://www.ti.com).

(2) Package drawings, thermal data, and symbolization are available at [www.ti.com/packaging](http://www.ti.com/packaging).

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

**SCHEMATIC DIAGRAM (EACH COMPARATOR)**

**Absolute Maximum Ratings<sup>(1)</sup>**

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
$V_{CC}$	Supply voltage <sup>(2)</sup>		36	V
$V_{ID}$	Differential input voltage range <sup>(3)</sup>		±36	V
$V_I$	Input voltage range (either input)	-0.3	36	V
$I_I$	Input current <sup>(4)</sup>	$V_I \leq -0.3$ V		-50 mA
	Duration of output short-circuit to ground <sup>(5)</sup>	Unlimited		
	Continuous total power dissipation <sup>(6)</sup>	See Dissipation Rating Table		
$\theta_{JA}$	Package thermal impedance <sup>(7)(8)</sup>		133.5	°C/W
$T_A$	Operating free-air temperature range	-40	85	°C
$T_J$	Operating virtual junction temperature		150	°C
$T_{lead}$	Lead temperature range	1,6 mm (1/16 in) from case for 60 s		300 °C
$T_{stg}$	Storage temperature range	-65	150	°C

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values, except differential voltages, are with respect to the network ground.
- (3) Differential voltages are at IN+ with respect to IN-.
- (4) This input current exists only when the voltage at any of the inputs is driven negative. The current flows through the collector-base junction of the input clamping device. In addition to the clamping device action, there is lateral n-p-n parasitic transistor action. This action is not destructive, and normal output states are reestablished when the input voltage returns to a value more positive than -0.3 V at  $T_A = 25^\circ\text{C}$ .
- (5) Short circuits between outputs to  $V_{CC}$  can cause excessive heating and eventual destruction.
- (6) If the output transistors are allowed to saturate, the low-bias dissipation and the on-off characteristics of the outputs keep the dissipation very small (usually less than 100 mW).
- (7) Maximum power dissipation is a function of  $T_J(\text{max})$ ,  $\theta_{JA}$ , and  $T_A$ . The maximum allowable power dissipation at any allowable ambient temperature is  $P_D = (T_J(\text{max}) - T_A)/\theta_{JA}$ . Operating at the absolute maximum  $T_J$  of 150°C can impact reliability.
- (8) The package thermal impedance is calculated in accordance with JEDEC 51 (low-K board).

**Dissipation Ratings**

PACKAGE	$T_A \leq 25^\circ\text{C}$ POWER RATING	DERATING FACTOR ABOVE $T_A = 25^\circ\text{C}$	$T_A = 70^\circ\text{C}$ POWER RATING	$T_A = 85^\circ\text{C}$ POWER RATING
D	936 mW	7.49 mW/°C	599 mW	486 mW

## Recommended Operating Conditions

			MIN	MAX	UNIT
$V_{CC}$	Supply voltage		3	30	V
$V_{IC}$	Common-mode input voltage	$V_{CC} = 5\text{ V}$	0	3	V
		$V_{CC} = 30\text{ V}$	0	28	
$V_I$	Input voltage	$V_{CC} = 5\text{ V}$	0	3	V
		$V_{CC} = 30\text{ V}$	0	28	
$T_A$	Operating free-air temperature		-40	85	°C

## Electrical Characteristics

 $V_{CC} = 5\text{ V}$ ,  $T_A = 25^\circ\text{C}$  (unless otherwise noted)

PARAMETER	TEST CONDITIONS		$T_A^{(1)}$	MIN	TYP	MAX	UNIT
$V_{IO}$	Input offset voltage	$V_{CC} = 5\text{ V to } 30\text{ V}$ , $V_O = 2\text{ V}^{(2)}$ , $R_S = 0$	25°C		±2	±5	mV
			Full range			±9	
$I_{IO}$	Input offset current		25°C		±0.5	±5	nA
			Full range		±1	±15	
$I_{IB}$	Input bias current <sup>(3)</sup>		25°C		-2.5	-25	nA
			Full range		-4	-40	
$V_{ICR}$	Common-mode input voltage range	Single supply	25°C	0 to $V_{CC} - 1.5$		V	
			Full range	0 to $V_{CC} - 2$			
$A_{VD}$	Large-signal differential voltage amplification	$V_{CC} = 15\text{ V}$ , $R_L = 15\text{ k}\Omega$		500		V/mV	
Output sink current	$V_{I-} = 1\text{ V}$ , $V_{I+} = 0$	$V_O = 2\text{ V}^{(4)}$	25°C	20	30	mA	
			Full range	15			
Output leakage current	$V_{I+} = 1\text{ V}$ , $V_{I-} = 0$	$V_O = 0.4\text{ V}$	25°C	0.2	0.7	nA	
		$V_O = 5\text{ V}$	25°C	0.1		nA	
$I_{CC}$	Supply current	$R_L = \infty$ , All comparators	Full range			1	μA
						36	V
$V_{ID}$	Differential input voltage	$V_I \leq 0$ (or $V_{CC-}$ on split supplies)				36	V
$I_{CC}$	Supply current	$R_L = \infty$ , All comparators		60	100	μA	

(1) Full range is  $-40^\circ\text{C}$  to  $125^\circ\text{C}$ .

(2)  $V_{IO}$  is measured over the full common-mode input voltage range.

(3) Because of the p-n-p input stage, the direction of the current is out of the device. This current essentially is constant (i.e., independent of the output state). No loading change exists on the reference or input lines as long as the common-mode input voltage range is not exceeded.

(4) The output sink current is a function of the output voltage. These devices have a bimodal output section that allows them to sink (via a Darlington connection) large currents at output voltages greater than 1.5 V and smaller currents at output voltages less than 1.5 V.

## Switching Characteristics

 $V_{CC} = 5\text{ V}$ ,  $T_A = 25^\circ\text{C}$ ,  $R_L$  connected to 5 V through 5.1 kΩ

PARAMETER	TEST CONDITIONS	TYP	UNIT
Large-signal response time	TTL logic swing, $V_{ref} = 1.4\text{ V}$	1.3	μs
Response time		8	

**APPLICATION INFORMATION**

Figure 1 shows the basic configuration for using the LP2901 comparator. Figure 2 shows the diagram for using it as a CMOS driver.

**Figure 1. Basic Comparator**

**Figure 2. CMOS Driver**

All pins of any unused comparators should be grounded. The bias network of the LP2901 establishes a drain current that is independent of the magnitude of the power-supply voltage over the range of 2 V to 30 V. It usually is necessary to use a bypass capacitor across the power-supply line.

The differential input voltage may be larger than  $V_{CC}$  without damaging the device. Protection should be provided to prevent the input voltages from going negative by more than  $-0.3$  V. The output section has two distinct modes of operation, the Darlington mode and the ground-emitter mode. This unique drive circuit permits the device to sink 30 mA at  $V_O = 2$  V in the Darlington mode and 700  $\mu$ A at  $V_O = 0.4$  V in the ground-emitter mode. Figure 3 is a simplified schematic diagram of the output section. The output section is configured in a Darlington connection (ignoring Q3). If the output voltage is held high enough (above 1 V), Q1 is not saturated and the output current is limited only by the product of the  $h_{FE}$  of Q1, the  $h_{FE}$  of Q2, and  $I_1$  and the 60- $\Omega$  saturation resistance of Q2. The devices are capable of driving LEDs, relays, etc. in this mode while maintaining an ultra-low power-supply current of 60  $\mu$ A typical.

**Figure 3. Output-Section Schematic Diagram**

Without transistor Q3, if the output voltage were allowed to drop below 0.8 V, transistor Q1 would saturate, and the output current would drop to zero. The circuit would be unable to pull low current loads down to ground or the negative supply, if used. Transistor Q3 has been included to bypass transistor Q1 under these conditions and apply the current  $I_1$  directly to the base of Q2. The output sink current now is approximately  $I_1$  times the  $h_{FE}$  of Q2 (700  $\mu\text{A}$  at  $V_O = 0.4$  V). The output of the devices exhibits a bimodal characteristic, with a smooth transition between modes.

In both cases, the output is an uncommitted collector. Several outputs can be tied together to provide a dot logic function. An output pullup resistor can be connected to any available power-supply voltage within the permitted power-supply range, and there is no restriction on this voltage, based on the magnitude of the voltage that is supplied to  $V_{CC}$  of the package.

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
LP2901IDRG4Q1	ACTIVE	SOIC	D	14	2500	RoHS & Green	NIPDAU	Level-1-260C-UNLIM	-40 to 85	LP2901IQ1	<a href="#">Samples</a>
LP2901IDRQ1	ACTIVE	SOIC	D	14	2500	RoHS & Green	NIPDAU	Level-1-260C-UNLIM	-40 to 85	LP2901IQ1	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
