

Vision Sensor F210

F210

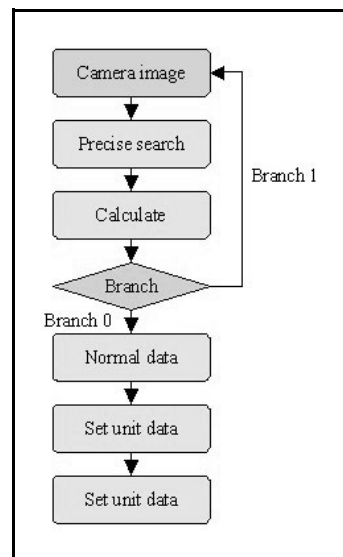

Features

Flow Menus

Flow Menus select the required processing items from the library, combining and linking them for you

Ideal for the following

- Stabilize measurement images by filtering the required number of times.
- Perform measurements according to workpiece tolerance by changing the measurement area based on measurement results
- Periodically check for data variations by outputting the maximum and minimum values for each 10 measurements,

Features

Macros

Augment Flow Menus using a PC text editor. The Software package can be edited using text commands to customize I/O controls, displays, and GUI

Programs can be created using only a text editor, with no need for any special development environment.

Ideal for the following

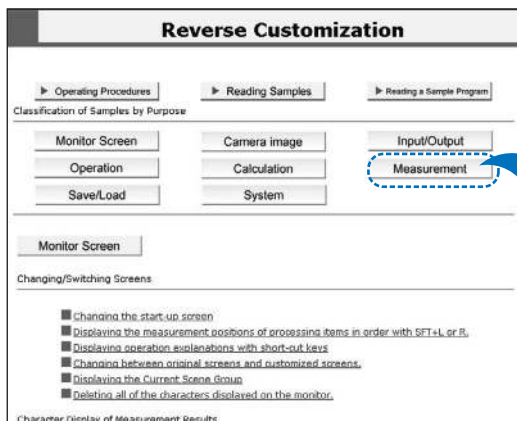

- Creating special menus.
- Displaying and outputting the date and time of NG measurements.
- Automatically saving NG images to a Memory Card.
- Changing the number of registered product types.

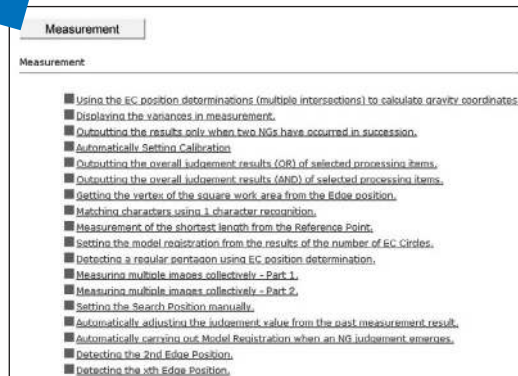

Special menus using macros

Customization Manual

The know-how from the past is incorporated in a manual so that Reverse Customization can be used to determine the best method to execute the desired process.

- Building Flow Menus and Using Macros
When an item is selected for operation, a sample program and explanation are displayed. Multiple samples can be easily combined.
