

FEATURES

- Two Normally Open and Two Normally Closed SPST Switches with Disable
- Switches can be Easily Configured as a Dual SPDT or a DPDT
- Highly Resistant to Static Discharge Destruction
- Higher Resistance to Radiation Than Analog Switches Designed with MOS Devices
- Guaranteed R_{ON} Matching 10% Max
- Guaranteed Switching Speeds $T_{ON} = 500\text{ns Max}$
 $T_{OFF} = 400\text{ns Max}$
- Guaranteed Break-Before-Make Switching
- Low "ON" Resistance 80 Ω Max
- Low R_{ON} Variation from Analog Input Voltage 5%
- Low Total Harmonic Distortion 0.01%
- Low Leakage Currents at High Temperature:
 $T_A = 125^\circ\text{C}$ 100nA Max
 $T_A = 85^\circ\text{C}$ 30nA Max
- Digital Inputs TTL/CMOS Compatible and Independent of V+
- Improved Specifications and Pin Compatible to LF-11333/1333
- Dual or Single Power Supply Operation
- Available in Die Form

GENERAL DESCRIPTION

The SW-06 is a four channel single-pole, single-throw analog switch that employs both bipolar and ion-implanted FET devices. The SW-06 FET switches use bipolar digital logic inputs which are more resistant to static electricity than CMOS devices. Ruggedness and reliability are inherent in the SW-06 design and construction technology.

Increased reliability is complemented by excellent electrical specifications. Potential error sources are reduced by minimizing "ON" resistance and controlling leakage currents at high temperatures. The switching FET exhibits minimal R_{ON} variation over a 20V analog signal range and with power supply voltage changes. Operation from a single positive power supply voltage is possible. With $V+ = 36\text{V}$, $V- = 0\text{V}$, the analog signal range will extend from ground to +32V.

PNP logic inputs are TTL and CMOS compatible to allow the SW-06 to upgrade existing designs. The logic "0" and logic "1" input currents are at micro-ampere levels reducing loading on CMOS and TTL logic.

NOTES:

1. V_S = 0V, I_S = 100μA. Specified as a percentage of R_{AVERAGE} where:

$$R_{\text{AVERAGE}} = \frac{R_{\text{ON}1} + R_{\text{ON}2} + R_{\text{ON}3} + R_{\text{ON}4}}{4}$$

2. Guaranteed by design.

3. Switch is guaranteed by design to provide break-before-make operation.

4. Current tested at V_{IN} = 2.0V. This is worst case condition.

5. Switch being tested ON or OFF as indicated. V_{INH} = 2.0V or V_{INL} = 0.8V, per logic truth table.

6. Also applies to disable pin.

7. Parameter tested only at T_A = +125°C for military grade device.

8. Guaranteed by R_{ON} and leakage tests. For normal operation maximum analog signal voltages should be restricted to less than (V₊) - 4V.

9. Sample tested.
