## Timing Chart

Even if power supply and signal at any timing are input, this IC is not destroyed.

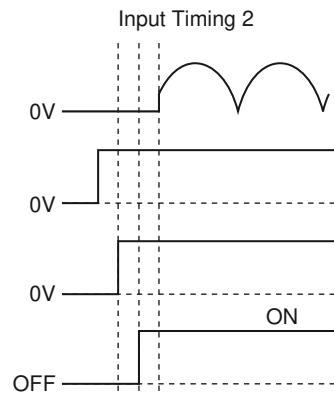

However, soft start circuit doesn't operate when  $V_{IN}(\text{DC})$  is input at the timing of Figure 11 and 12.

Therefore, overcurrent protection circuit will operate, and audio frequency noise from coil may generate.

Please turn on ON/OFF or  $V_{CC}$  after  $V_{IN}(\text{DC})$  to avoid this.
