PRODUCT OVERVIEW

LEE2-6+ (RoHS compliant) is wideband current driven amplifier fabricated using HBT technology. In addition, the LEE2-6+, has good input and output return loss over a broad frequency range without the need for external matching components. Lead finish is Tin Silver over Nickel. It has repeatable performance from lot to lot and is enclosed in a 2mm x 2mm x 0.89mm 6-lead MCLP package for very good electrical performance.

KEY FEATURES

Features	Advantages
Broadband, DC* to 7 GHz (* Low frequency cut off determined by external coupling capacitors)	A single amplifier covering DC* to C band. • Reduced component inventory • Ideal for wideband applications such as instrumentation and military
Low Noise Figure: 2.3 dB at 2 GHz	Low noise figure and low current (16mA) is ideal for use as an LNA in receivers
High Gain, 18.9 dB at 2 GHz	Minimizes the effect of NF of succeeding stages.
MCLP Package	Low inductance, repeatable transitions, excellent thermal pad.

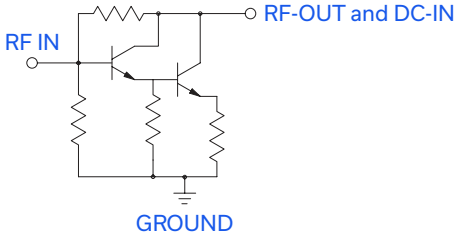
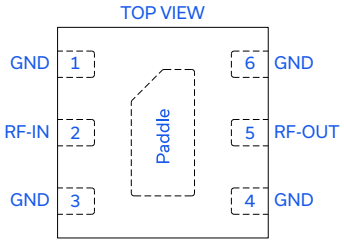
SIMPLIFIED SCHEMATIC AND PAD DESCRIPTION





Function	Pad Number	Description
RF-IN	2	RF input pin. This pin requires the use of an external DC blocking capacitor chosen for the frequency of operation.
RF-OUT and DC-IN	5	RF output and bias pin. DC voltage is present on this pin; therefore a DC blocking capacitor is necessary for proper operation. An RF choke is needed to feed DC bias without loss of RF signal due to the bias connection, as shown in "Recommended Application Circuit".
GND	Paddle	Connections to ground.
NC	1,3,4,6	No connection. Use via holes as shown in "Suggested Layout for PCB Design" to reduce ground path inductance for best performance.
