

Hardness Tester PCE-HT 225E

PCE-HT 225E Hardness Tester Features a direct digital display, voice functionality and internal memory

PCE-HT 225E is a hardness tester or concrete test hammer, also called a concrete rebound hammer or Swiss hammer, used for non-destructive measurements of surface hardness and compression strength. Suitable for use with concrete, rock and building materials, this rebound hammer features a direct digital display, voice functionality, USB port data interface and memory for storing up 200 measurement values.

The manufacturer-calibrated concrete test hammer clearly shows the measured values directly on the attached LCD screen, making the results easy to read. The USB port allows for data transfer to a PC or printer. PC software for data processing is included in the delivery contents.

- Non-destructive
- Manufacturer calibrated
- Direct digital display
- Voice functionality
- USB port data interface
- Memory for up to 200 values
- Includes software for data processing
- Adjustable backlight brightness and energy-saving automatic power off
- > Pump marking, measuring curve, carbonation depth and upper / lower permissible value limit settings
