

Tweezers - Straight (cross-lock, ESD Safe)

TOL-12573 RoHS

Description: These are nice, cross-locking, straight tweezers, unlike traditional models the tips on these tweezers will remain closed until squeezed open. They have a very fine tip which allows you to pick up very small parts with precision. This is a great tool to have if you're working with surface mount components or anything with very small parts. The ESD-safe coating will also help prevent electro-static damage to sensitive electronic components.
