

CPI2-B1-REU – universal programmer

CPI2-B1-REU in-system device programmer

This **preloaded** device programmer bundles a standard **CPI2-B1** single-channel device programmer with a few of device library licenses that enable programming of a variety of Renesas devices currently supported by Phyton. See a list of the preinstalled device library licenses in the matrix below. Plus, as any other preloaded device programmers, this bundle includes the free **Basic Device Library** license.

The CPI2-B1-REU device programmer will automatically enable programming of all new devices belonging to the Renesas libraries below that Phyton will support in the future – no new purchase is required.

To expand the CPI2-B1-REU device list, additional **CPI2-D-xxxx** device library licenses, not included in the CPI2-B1-REU bundle, can be purchased and installed by the programmer's user.

| Bundled licenses | Description |
|------------------|---|
| Basic License | Free Basic Device Library license that supports all serial flash memory devices and selected 8- and 16-bit microcontrollers from different manufacturers |
| CPI2-D-RE26 | Renesas RL78/RX200/RX6xxx device library license |
| CPI2-D-UPD78 | Renesas uPD78xx device library license |
| CPI2-D-RE8C | Renesas R8C device library license |
| CPI2-D-RE85 | Renesas V850 device library license |
